Re: Horizon Uptown
Phase 6, Filing 6
Aurora, CO
LSC #210520

Dear Ms. Kneebone-Marler:

In response to your request, LSC Transportation Consultants, Inc. has prepared this site-specific traffic impact analysis for the proposed Horizon Uptown Phase 6, Filing 6 development. As shown on Figure 1, the site is located south of the I-70 Frontage Road, east of Picadilly Road, and north of Stephen D. Hogan Parkway in the City of Aurora, Colorado.

REPORT CONTENTS

The report contains the following: the existing roadway and traffic conditions in the vicinity of the site including the lane geometries, traffic controls, posted speed limits, etc.; the existing weekday peak-hour traffic volumes; the existing daily traffic volumes in the area; the typical weekday site-generated traffic volume projections for the site; the assignment of the projected traffic volumes to the area roadways; the projected short-term and long-term background and resulting total traffic volumes on the area roadways; the site's projected traffic impacts; and any recommended roadway improvements needed to mitigate the growth in background traffic or from the site's traffic impacts.

COMPARISON TO ASSUMPTIONS IN THE MASTER TRAFFIC STUDY

Matrix Design Group completed a Master Traffic Study for Horizon Uptown dated November 2, 2018 (Master TIA). In that study the master plan area was divided into 20 planning areas as shown in Figure 2. The Phase 6, Filing 6 site is within a portion of Planning Area 14 as shown in Figure 2.

LAND USE AND ACCESS

The Phase 6, Filing 6 site is proposed to include 89 single-family homes and 74 duplex dwelling units. Access is proposed from several locations as shown in the conceptual site plan in Figure 3.

ROADWAY AND TRAFFIC CONDITIONS

Area Roadways

The major roadways in the site's vicinity are shown on Figure 1 and are described below.

- **I-70 Frontage Road** is an east-west, two-lane frontage road north of the site. The intersections with Colfax Avenue and Picadilly Road are stop-sign controlled. The posted speed limit is 30 mph west of Picadilly Road and 45 mph east of Picadilly Road.
- **Picadilly Road** is a north-south, two-lane arterial roadway west of the site. The intersections with the I-70 Frontage Road and Stephen D. Hogan Parkway are stop-sign controlled. The posted speed limit is 45 mph in the vicinity of the site. It is planned to be a six-lane major arterial by 2040 per the *Aurora NEATS* study. The City of Aurora and CDOT plan to begin design of the proposed I-70/Picadilly interchange in the near future.
- **Stephen D. Hogan Parkway** is an east-west, two-lane major arterial roadway south of the site. The intersection with Picadilly Road is stop-sign controlled. No speed limit is posted in the vicinity of the site. It is planned to be a six-lane major arterial by 2040 per the *Aurora NEATS* study.
- **Colfax Avenue** is an east-west, four-lane state highway north of the site. The intersection with the Frontage Road is stop-sign controlled. The posted speed limit in the vicinity of the site is 55 mph.

The applicant is coordinating with the City and CDOT as well as with adjacent developers on the interim and ultimate conditions for the area north of the site where Picadilly Road, the Frontage Road, and E. Colfax Avenue all meet.

Existing Traffic Conditions

Figure 4 shows the existing traffic volumes, lane geometry, and traffic control at the intersection of Picadilly Road/E. 11th Avenue. The weekday peak-hour traffic volumes and daily traffic counts are based on the attached traffic counts conducted by Counter Measures in August, 2021.

2026 and 2040 Background Traffic

Figure 5a shows the estimated 2026 background traffic. The 2026 background volumes are based on the existing volumes shown in Figure 4 assuming a growth rate of through traffic on Picadilly Road of two percent per year plus estimates of traffic projected to be generated with buildout of Horizon Uptown Filing Nos. 1 through 3, traffic projected to be generated with buildout of Horizon Uptown Phase 5, Filing 5, traffic projected to be generated by the initial phase of the Stafford Logistics Center (Buildings 1 through 3) taken from the recently approved *Stafford Logistics Center TIS* by FHU, and about 60 percent of the traffic projected to be generated by Aurora One at buildout taken from the recently approved *Aurora One TIS* by Fox and Tuttle Transportation Group, LLC. Key pages from the *Stafford Logistics Center TIS* and

Aurora One TIS including the trip generation information are attached for reference. The 2026 background traffic volumes shown in Figure 5a calculate to an annual growth rate of 18 percent for through traffic on Picadilly Road adjacent to the site. This is more conservative than the 9.6 percent growth rate calculated for this same section using the projected 2030 and 2040 volumes shown in the NEATS. It was assumed that this area will see rapid growth in the next few years and then growth will slow down as Horizon Uptown, Aurora One, and Stafford Logistics Center are finished. Figure 5b shows the estimated 2026 background lane geometry and traffic control.

Figure 6a shows the estimated 2040 background traffic based on the buildout of the Horizon Uptown Master Plan, the Stafford Logistics Center, Aurora One, and the updated Aurora NEATS study. Figure 6b shows the estimated 2040 background lane geometry and traffic control.

Existing, 2026, and 2040 Background Levels of Service

Level of service (LOS) is a quantitative measure of the level of congestion or delay at an intersection. Level of service is indicated on a scale from "A" to "F". LOS "A" is indicative of little congestion or delay and LOS "F" is indicative of a high level of congestion or delay. Attached are specific level of service definitions for signalized and unsignalized intersections.

The intersections in Figures 4 through 6b were analyzed to determine the existing, 2026, and 2040 background levels of service using Synchro. Table 1 shows the level of service analysis results. The level of service reports are attached.

- 1. Picadilly Road/E. 11th Avenue:** All movements at this stop-controlled intersection currently operate at LOS "B" or better during both morning and afternoon peak-hours and are expected to operate at LOS "C" or better through 2026. This intersection is expected to operate an overall LOS "C" or better in 2040 if traffic signal control is implemented.
- 2. Picadilly Road/E. 10th Avenue:** All movements at this future stop-controlled intersection are expected to operate at LOS "D" or better during both morning and afternoon peak-hours through 2040.
- 3. Picadilly Road/E. 8th Avenue:** All movements at this stop-controlled intersection are expected to operate at LOS "D" or better during both morning and afternoon peak-hours through 2026. This intersection is expected to operate an overall LOS "A" in 2040 if traffic signal control is implemented.
- 4. Picadilly Road/E. 7th Avenue:** All movements at this stop-controlled intersection are expected to operate at LOS "C" or better during both morning and afternoon peak-hours through 2026. This intersection is expected to operate an overall LOS "A" in 2040 if traffic signal control is implemented.
- 5. Picadilly Road/E. 6th Avenue:** All movements at this future right-in/right-out stop-controlled intersection are expected to operate at LOS "C" or better during both morning and afternoon peak-hours through 2040.

6. **Rome Street/E. 6th Avenue:** All movements at this future stop-sign controlled intersection are expected to operate at LOS “B” or better during both morning and afternoon peak-hours through 2040.
7. **E. 11th Avenue/Road B:** All movements at this future stop-sign controlled intersection are expected to operate at LOS “B” or better during both morning and afternoon peak-hours through 2040.
8. **E. 11th Avenue/Horizon Parkway:** All movements at this future stop-sign controlled intersection are expected to operate at LOS “B” or better during both morning and afternoon peak-hours through 2040.
9. **E. 10th Avenue/Quatar Street:** All movements at this stop-sign controlled intersection are expected to operate at LOS “A” during both morning and afternoon peak-hours through 2040.
10. **E. 10th Avenue/Road B:** This intersection was only analyzed for the 2026 and 2040 total scenarios.
11. **E. 10th Avenue/Riviera Street:** All movements at this stop-sign controlled intersection are expected to operate at LOS “A” during both morning and afternoon peak-hours through 2040.
12. **E. 10th Avenue/Horizon Parkway:** All movements at this future stop-sign controlled intersection are expected to operate at LOS “A” during both morning and afternoon peak-hours through 2040.

TRIP GENERATION

Table 2 shows the estimated average weekday, morning peak-hour, and afternoon peak-hour trip generation for the proposed land use based on the rates from Trip Generation, 10th Edition, 2017 by the Institute of Transportation Engineers (ITE).

The proposed site is projected to generate about 1,539 vehicle-trips on the average weekday, with about half entering and half exiting during a 24-hour period. During the morning peak-hour which generally occurs for one hour between 6:30 and 8:30 a.m., about 30 vehicles would enter and about 90 vehicles would exit the site. During the afternoon peak-hour, which generally occurs for one hour between 4:00 and 6:00 p.m., about 102 vehicles would enter and about 60 vehicles would exit.

DIRECTIONAL DISTRIBUTION

Figure 7 shows the estimated directional distribution of the residential site-generated traffic volumes on the area roadways. The estimates were based on the location of the site with respect to the regional population, employment, and activity centers; and the site's proposed land use. The directional distribution estimate for Horizon Uptown was modified from what was shown in the approved Master traffic study for Horizon Uptown as part of a site-specific traffic study for Horizon Uptown Filing No. 3. This change was necessary based on the expanded

study area of this study. The directional distribution estimate used in this Phase 6 report is consistent with the expanded distribution estimate assumed in the Filing No. 3 report.

TRIP ASSIGNMENT

Figure 8 shows the estimated 2026 assignment of site-generated traffic volumes based on the trip generation estimate (from Table 2) and the 2026 directional distribution shown in Figure 7.

Figure 9 shows the estimated 2040 assignment of site-generated traffic volumes based on the trip generation estimate (from Table 2) and the 2040 directional distribution shown in Figure 7.

2026 AND 2040 TOTAL TRAFFIC

Figure 10a shows the estimated 2026 total traffic which is the sum of the 2026 background traffic volumes (from Figure 5a) and the 2026 site-generated traffic volumes (from Figure 8). Figure 10b shows the recommended 2026 lane geometry and traffic control.

Figure 11a shows the estimated 2040 total traffic which is the sum of the 2040 background traffic volumes (from Figure 6a) and the 2040 site-generated traffic volumes (from Figure 9). Figure 11b shows the recommended 2040 lane geometry and traffic control.

PROJECTED LEVELS OF SERVICE

The intersections in Figures 10a through 11b were analyzed to determine the 2026 and 2040 total levels of service. Table 1 shows the level of service analysis results. The level of service reports are attached.

1. **Picadilly Road/E. 11th Avenue:** All movements at this stop-controlled intersection are expected to operate at LOS "D" or better during both morning and afternoon peak-hours through 2026. This intersection is expected to operate an overall LOS "C" or better in 2040 if traffic signal control is implemented.
2. **Picadilly Road/E. 10th Avenue:** All movements at this future stop-controlled intersection are expected to operate at LOS "D" or better during both morning and afternoon peak-hours through 2040.
3. **Picadilly Road/E. 8th Avenue:** All movements at this stop-controlled intersection are expected to operate at LOS "D" or better during both morning and afternoon peak-hours through 2026. This intersection is expected to operate an overall LOS "A" in 2040 if traffic signal control is implemented.
4. **Picadilly Road/E. 7th Avenue:** All movements at this stop-controlled intersection are expected to operate at LOS "C" or better during both morning and afternoon peak-hours through 2026. This intersection is expected to operate an overall LOS "A" in 2040 if traffic signal control is implemented.

5. **Picadilly Road/E. 6th Avenue:** All movements at this future right-in/right-out stop-controlled intersection are expected to operate at LOS "C" or better during both morning and afternoon peak-hours through 2040.
6. **Rome Street/E. 6th Avenue:** All movements at this future stop-controlled intersection are expected to operate at LOS "B" or better during both morning and afternoon peak-hours through 2040.
7. **E. 11th Avenue/Road B:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "B" or better during both morning and afternoon peak-hours through 2040.
8. **E. 11th Avenue/Horizon Parkway:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "B" or better during both morning and afternoon peak-hours through 2040.
9. **E. 10th Avenue/Quatar Street:** All movements at this stop-sign controlled intersection are expected to operate at LOS "A" during both morning and afternoon peak-hours through 2040.
10. **E. 10th Avenue/Road B:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "A" during both morning and afternoon peak-hours through 2040.
11. **E. 10th Avenue/Riviera Street:** All movements at this stop-sign controlled intersection are expected to operate at LOS "A" during both morning and afternoon peak-hours through 2040.
12. **E. 10th Avenue/Horizon Parkway:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "A" during both morning and afternoon peak-hours through 2040.

TURN LANE RECOMMENDATIONS

Table 3 shows the 95th percentile queue lengths at the Picadilly Road intersections based on the 2040 total peak-hour traffic volumes and provides recommended turn lane and taper lengths. The recommended turn lane lengths are based on the NR-B classification criteria in the CDOT *State Highway Access Code*, projected 95th percentile queue lengths, and the proposed intersection spacing.

TRAFFIC SIGNAL WARRANT ANALYSIS

Tables 4 through 6 include a traffic signal warrant analysis for Intersections #1 (Picadilly Road/E. 11th Avenue), #3 (Picadilly Road/E. 8th Avenue), and #4 (Picadilly Road/E. 7th Avenue). The analyses show that Eight-Hour Vehicular Volume and Four-Hour Vehicular Volume signal warrants will be met at all three of the intersections analyzed by 2040. The developer will be required to make traffic signal contributions per City requirements.

SUMMARY OF RECOMMENDED IMPROVEMENTS

Table 7 shows a summary of the various recommended improvements.

CONCLUSIONS AND RECOMMENDATIONS**Trip Generation**

1. The proposed site is projected to generate about 1,539 vehicle-trips on the average weekday, with about half entering and half exiting during a 24-hour period. During the morning peak-hour, about 30 vehicles would enter and about 90 vehicles would exit the site. During the afternoon peak-hour, about 102 vehicles would enter and about 60 vehicles would exit.

Projected Levels of Service

2. The intersections of Picadilly Road/E. 11th Avenue, Picadilly Road/E. 8th Avenue, and Picadilly Road/E. 7th Avenue expected to operate at acceptable levels of service through 2026 as stop-sign controlled intersections. By 2040 all three intersections are projected to meet traffic signal warrants and are projected to operate at acceptable levels of service based on the projected 2040 total traffic volumes with the recommended improvements which include the installation of traffic signals.
3. All of the other intersections analyzed are expected to operate at acceptable levels of service by 2040 as two-way, stop controlled intersections.

Conclusions

4. The impact of the site can be accommodated by the existing and planned roadway network with the following recommended improvements.

Recommendations

5. The recommended improvements for 2026 total traffic are shown in Figure 10b and Table 7.
6. The recommended improvements for 2040 total traffic are shown in Figures 11b and Tables 3 and 7.

* * * * *

We trust our findings will assist you in gaining approval of the proposed Horizon Uptown Phase 6, Filing 6 development. Please contact me if you have any questions or need further assistance.

Sincerely,

LSC TRANSPORTATION CONSULTANTS, INC.

Notes:

- (1) Queue lengths for signalized intersections are from the queuing reports included in the appendix.
- (2) m = metered by adjacent signals
- (3) Auxiliary turn lane lengths on arterial roadways are based on 40 mph and the NR-B classification in the *CDOT State Highway Access Code* and the 95th percentile queue length.
A redirect taper of 30:1 is appropriate for 40 mph.

Notes:

(1) Thresholds are based on 2 or more lanes on the major approach and 1 lane on the minor approach with the 70% factor applied for a posted speed limit above 40 mph

(2) The major street traffic includes all movements (left, through, and right)

(3) The minor street traffic includes left, through, and half of right-turn volumes from the minor street

III. PROPOSED CONDITIONS

III.A. Site Trip Generation

The current development proposal consists of approximately 4.2 million square feet of industrial park uses and related retail/commercial/hotel uses once built out with approximately 1.1 million square feet being dedicated to a single user fulfilment center. Phase I of the development will include the first three industrial park buildings, the first of which is currently under construction, and the third building is planned to be dedicated to a single user fulfilment center. NorthPoint Development does not intend to build the retail portions of the site until the Horizon Uptown development is well underway or construction of the Picadilly/I-70 interchange is nearly complete as the retail uses will not be supported under current surrounding land use and regional access conditions. A trip generation analysis for the proposed site plan was conducted using average weekday data contained in Trip Generation, 10th Edition, Institute of Transportation Engineers (ITE), 2017. **Table I** shows the trip generation estimates.

Table I. Stafford Trip Generation Estimates

Land Use	ITE Code	Quantity	Units	Daily	AM Peak Hour			PM Peak Hour			
					In	Out	Total	In	Out	Total	
Industrial Park (Bldg. 1 & 2) ³	130	1,118.1	KSF	3,295	362	85	447	93	354	447	
Single User Fulfilment Center ³	Custom	1,079.7	KSF	2,128	161	119	280	240	254	494	
Industrial Park (Total)	130	3,124.8	KSF	5,622	1,012	238	1,250	262	988	1,250	
Shopping Center	820	75.6	KSF	4,971	118	72	190	212	230	442	
Supermarket	850	34	KSF	3,623	78	52	130	178	171	349	
Drive-in Bank	912	6	KSF	614	33	24	57	61	62	123	
Hotel	310	200	Rooms	1,672	56	39	95	63	61	124	
Gas/Service Station	945	16	Pumps	2,752	82	82	164	112	112	224	
Short-Term Total Trips					5,423	523	204	727	333	608	941
Long-Term Total Trips					21,382	1,540	626	2,166	1,128	1,878	3,006
Internal Capture Reduction¹					380	5	5	10	19	19	38
Pass by Reduction²					1,376	41	41	82	56	56	112
Total New External Trips					19,626	1,494	580	2,074	1,053	1,803	2,856

Notes:

1. Daily internal capture is assumed to be 10 times the PM value as calculated using ITE methodology. See text relative to Peak Hour internal trip-making.
2. Pass by reduction of 50% for Gas/Service Station is assumed from traffic passing the site along Picadilly Road.
3. Use is part of the short-term timeframe development.

National Cooperative Highway Research Program (NCHRP) 684 provides the methodology for internal capture reductions based on the interactions of different land uses within mixed-use developments, including office, retail, restaurant, residential, cinema, and hotel. The methodology considers that mixed-use developments will keep a portion of the trips generated internal to the site, thus reducing impacts to the adjacent roadway network. Internal capture worksheets can be found in **Appendix C**.

As can be seen, the proposed development would generate approximately 19,600 external trips per day, with about 2,100 AM peak hour trips and about 2,900 PM peak hour external trips. The first phase of development includes the first two industrial park buildings, plus the single user fulfilment center, which

Aurora One

Traffic Impact Study

Multi-Use (Internal) Trips. These internal trips occur from one land use or building to another within the site boundaries. Multi-use or multi-purpose trips typically do not affect the exterior site access points, nor add any additional traffic volumes to the adjacent street network. Based on ITE's *Trip Generation Handbook*, the internal capture for the project was calculated to be 15%. For conservative purposes, 10% internal capture was applied to all land use types as shown in the fourth column of **Table 5** titled "internal capture".

Non-Auto Trips. These trips are those that are completed by walking, biking, or transit. The future pedestrian and bicycle amenities will encourage residents, employees, customers, and visitors to make non-auto trips to/from the Aurora One community. The non-auto trips are assumed to be a 5% for land uses as shown in the fifth column of **Table 5** titled "non-auto factor".

Table 6 summarizes the land uses that were assumed for the development. This mix of land use types may adjust as interested parties come forward; however, the trip estimate is assumed to be conservative. Aurora One was estimated to generate approximately 18,065 daily trips with 1,101 trips in the AM peak hour and 1,480 trips in the PM peak hour, with roughly 30% considered pass-by trips.

Table 6: Land Use Assumptions

Planning Area	Land Use Type	Size (rounded)	Planning Area	Land Use Type	Size (rounded)
PA-1	Medical Office	12,000 sq. ft.	PA-9	Medical Office	11,200 sq. ft.

LEVEL OF SERVICE DEFINITIONS

From *Highway Capacity Manual, Transportation Research Board, 2016, 6th Edition*

SIGNALIZED INTERSECTION LEVEL OF SERVICE (LOS)

<u>LOS</u>	<u>Average Vehicle Delay</u> sec/vehicle	<u>Operational Characteristics</u>
A	<10 seconds	Describes operations with low control delay, up to 10 sec/veh. This LOS occurs when progression is extremely favorable and most vehicles arrive during the green phase. Many vehicles do not stop at all. Short cycle lengths may tend to contribute to low delay values.
B	10 to 20 seconds	Describes operations with control delay greater than 10 seconds and up to 20 sec/veh. This level generally occurs with good progression, short cycle lengths, or both. More vehicles stop than with LOS A, causing higher levels of delay.
C	20 to 35 seconds	Describes operations with control delay greater than 20 and up to 35 sec/veh. These higher delays may result from only fair progression, longer cycle length, or both. Individual cycle failures may begin to appear at this level. Cycle failure occurs when a given green phase does not serve queued vehicles, and overflows occur. The number of vehicles stopping is significant at this level, though many still pass through the intersection without stopping.
D	35 to 55 seconds	Describes operations with control delay greater than 35 and up to 55 sec/veh. At LOS D, the influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, and high v/c ratios. Many vehicles stop, and the proportion of vehicles not stopping declines. Individual cycle failures are noticeable.
E	55 to 80 seconds	Describes operations with control delay greater than 55 and up to 80 sec/veh. These high delay values generally indicate poor progression, long cycle lengths, and high v/c ratios. Individual cycle failures are frequent.
F	>80 seconds	Describes operations with control delay in excess of 80 sec/veh. This level, considered unacceptable to most drivers, often occurs with over-saturation, that is, when arrival flow rates exceed the capacity of lane groups. It may also occur at high v/c ratios with many individual cycle failures. Poor progression and long cycle lengths may also contribute significantly to high delay levels.

LEVEL OF SERVICE DEFINITIONS

From *Highway Capacity Manual, Transportation Research Board, 2016, 6th Edition*

UNSIGNALIZED INTERSECTION LEVEL OF SERVICE (LOS)

Applicable to Two-Way Stop Control, All-Way Stop Control, and Roundabouts

LOS	Average Vehicle Control Delay	Operational Characteristics
A	<10 seconds	Normally, vehicles on the stop-controlled approach only have to wait up to 10 seconds before being able to clear the intersection. Left-turning vehicles on the uncontrolled street do not have to wait to make their turn.
B	10 to 15 seconds	Vehicles on the stop-controlled approach will experience delays before being able to clear the intersection. The delay could be up to 15 seconds. Left-turning vehicles on the uncontrolled street may have to wait to make their turn.
C	15 to 25 seconds	Vehicles on the stop-controlled approach can expect delays in the range of 15 to 25 seconds before clearing the intersection. Motorists may begin to take chances due to the long delays, thereby posing a safety risk to through traffic. Left-turning vehicles on the uncontrolled street will now be required to wait to make their turn causing a queue to be created in the turn lane.
D	25 to 35 seconds	This is the point at which a traffic signal may be warranted for this intersection. The delays for the stop-controlled intersection are not considered to be excessive. The length of the queue may begin to block other public and private access points.
E	35 to 50 seconds	The delays for all critical traffic movements are considered to be unacceptable. The length of the queues for the stop-controlled approaches as well as the left-turn movements are extremely long. There is a high probability that this intersection will meet traffic signal warrants. The ability to install a traffic signal is affected by the location of other existing traffic signals. Consideration may be given to restricting the accesses by eliminating the left-turn movements from and to the stop-controlled approach.
F	>50 seconds	The delay for the critical traffic movements are probably in excess of 100 seconds. The length of the queues are extremely long. Motorists are selecting alternative routes due to the long delays. The only remedy for these long delays is installing a traffic signal or restricting the accesses. The potential for accidents at this intersection are extremely high due to motorist taking more risky chances. If the median permits, motorists begin making two-stage left-turns.

Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 59 (49%), Referenced to phase 2:NBT and 6:SBTL, Start of Yellow

Natural Cycle: 65

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.59

Intersection Signal Delay: 9.7

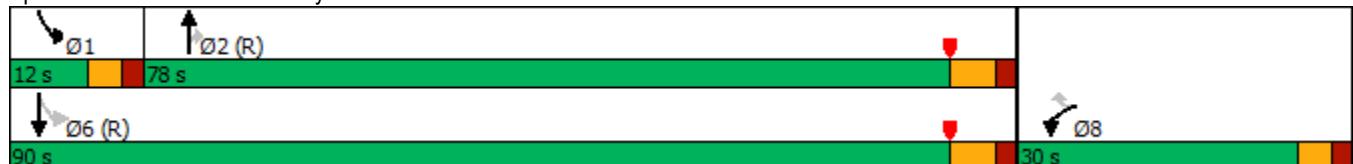

Intersection LOS: A

Intersection Capacity Utilization 64.8%

ICU Level of Service C

Analysis Period (min) 15

Splits and Phases: 4: Picadilly Rd & 7th Ave

HCM 6th Signalized Intersection Summary
