RE: Murphy Creek Interconnection and Delivery Vault Project
Attachment 6 - Accompanying Documents

To Planning and Development Staff:

The following accompanying documents are presented below.

Building Material Samples

The building materials associated with the new Interconnection and Delivery Vault are typical for this type of facility and include:

- A pre-cast concrete structure
- Ductal iron pipe (DIP) or polyvinyl chloride (PVC) pipelines and fittings
- Pipe appurtenances such as flow meters, valves, and back flow preventors
- Stainless steel cabinets for the instrumental and controls equipment
- Radio Antenna
- Stainless steel access hatches, walkways, and monorail beam supports

Refer to Attachment 1 for example vault layout and picture of similar infrastructure located in the City of Aurora and the elevation in Attachment 3- Site Plan drawings.

Colored Elevations

The new Interconnection and Delivery Vault will be mostly underground and only approximately 6-in of the vault roof will be aboveground along with the power and instrumental and control panels needed to remotely monitor and control the vault through the Owner's existing radio-based control network. Refer to Attachment 1 for example underground interconnection and delivery vault layouts and pictures of similar infrastructure located within the City of Aurora and the elevation in Attachment 3 – Site Plant.
