I. INTRODUCTION

Port Colorado, formerly TransPort Colorado, is planning to develop Subarea 2 of their master-planned business and industrial park in the City of Aurora, Colorado. Subarea 2 is an 1,860-acre parcel that is approximately bounded north-south by 56th Avenue and 32nd Avenue, and east-west by Imboden Road/Quail Run Road and Manila Road. The project will be developed with light industrial uses.

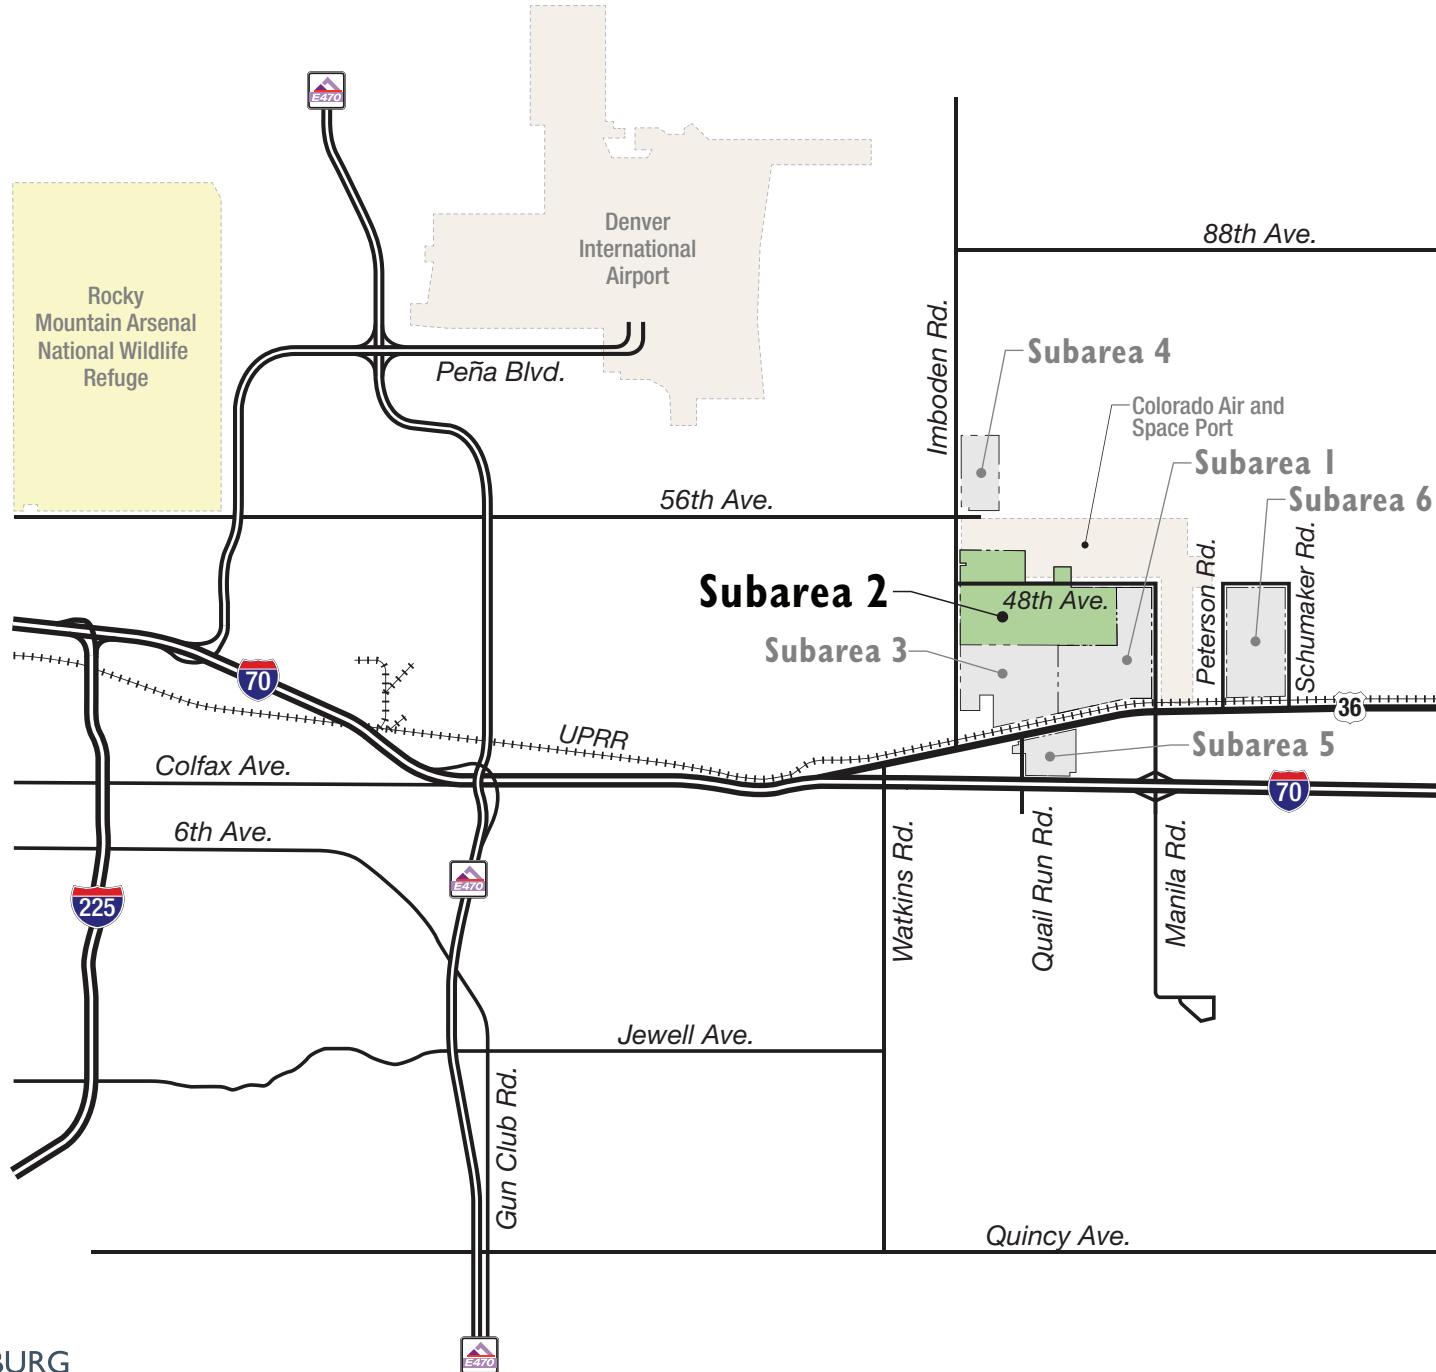

Figure 1 provides a vicinity map of the project location, and **Figure 2** illustrates the proposed site plan.

This Traffic Impact Analysis (TIA) assesses the traffic impacts related to the development of Port Colorado Subarea 2. Specific elements of this report are based on pre-application notes provided by the City of Aurora in September 2021. Short- and Long-Term future scenarios were explored for this site. These scenarios examine the traffic impacts within the context of the year 2040 and the future regional planning horizon beyond the year 2040.

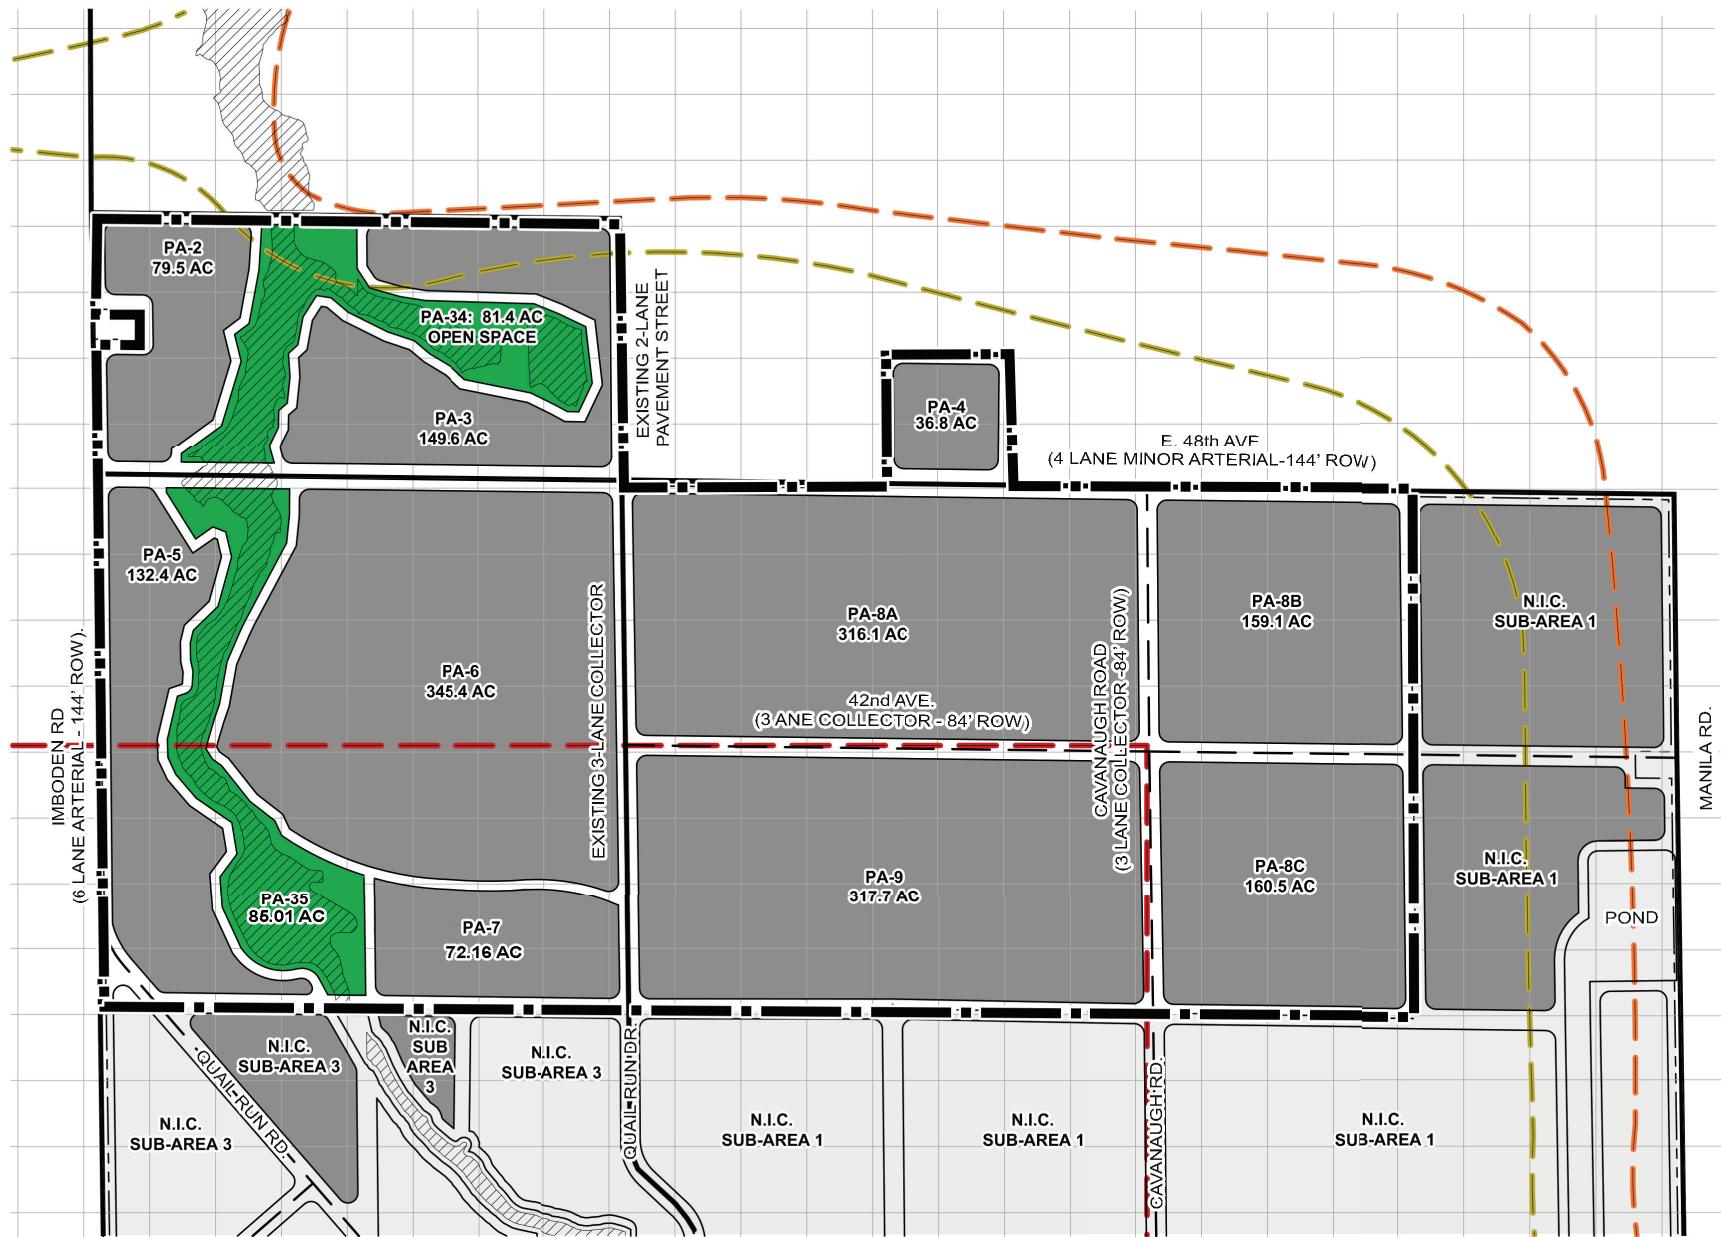

The following summarizes what is included in this report:

- Evaluation of existing operational conditions
- Trip generation estimates for the proposed land uses
- Analysis of project impacts
- Consistency with the *Northeast Aurora Transportation Study Refresh (NEATS Refresh)*
- Discussion on pedestrian trail construction adjacent Bear Gulch
- Recommendations for public improvements

This study builds from analyses provided in the *TransPort Colorado Traffic Impact Study Analysis*, July 2022, prepared by Felsburg Holt & Ullevig, which addressed transportation needs of the 5,378-acre Port Colorado Framework Development Plan (FDP).

NOTE: Drawing Not to Scale

II. EXISTING CONDITIONS

II.A. Land Use

The area that immediately surrounds the site is largely undeveloped with the exception of the Colorado Air and Space Port (Space Port) to the north. Residential and commercial uses exist in the Towns of Watkins and Bennett, while the Prosper residential and commercial site is developing approximately one mile to the west along the south side of I-70. The Rocky Mountain Rail Park, a rail-served property, is an approved Adams County project that abuts Subarea 6 on the west side of Peterson Road. The site itself is currently vacant.

II.B. Roadway System

The Port Colorado Subarea 2 site will occupy nearly 3 square miles of land. Several existing roadways are spaced along one-mile land sections, although most of these roads currently have very little traffic and are somewhat discontinuous. More detailed descriptions of the primary roadways adjacent to and near the project site follow.

Interstate 70 (I-70)

I-70 is a major interstate route that bisects the state of Colorado at its approximate north/south midpoint. Not only is this route the primary east/west corridor for interstate travel in Colorado, but this route provides access to many states outside Colorado, from Utah to Maryland. I-70 has four travel lanes for vehicle movements and is posted with a speed limit of 75 miles per hour (MPH) in the study area.

Interchanges with I-70 near the project site include the Manila Road Interchange, approximately 2 miles southeast and the Watkins Road interchange approximately 5 miles south west of Port Colorado Subarea 2. However, a new interchange at the Imboden Road/Quail Run Road alignment is being proposed as the primary interstate access route for the Port Colorado Subarea 2 land uses, and it is currently proceeding through the Colorado Department of Transportation (CDOT) 1601 process for interchange approval.

United States 36 (US 36)

The southern boundary of the Port Colorado Subarea 2 project lies along approximately one-half mile north of Union Pacific Railroad (UPRR) trackage that is directly adjacent to the north side of US 36. The UPRR and US 36 parallel each other along the entire length of Port Colorado's southern boundary. The centerline-to-centerline distance between these two facilities is approximately 200 feet. US 36 is two lanes wide and has a posted speed limit of 55 MPH. Several section line roadways intersect US 36, and each intersecting roadway is controlled by stop signs at US 36, notably at Imboden Road and Manila Road adjacent to the Port Colorado site. CDOT classifies US 36 as a Rural Highway (R-B) in this area.

Manila Rd, Cavanaugh Rd, Quail Run Rd, Quail Run Dr, & Imboden Road/Quail Run Road Dr

Each of these roadways exists at one-mile intervals in or near Port Colorado Subarea 2, with each having a north/south orientation.

Manila Road provides access to the main entryway for the Space Port via 48th Avenue, and it has a posted speed of 45 MPH. Manila Road provides an interchange with I-70 and continues south into Arapahoe County.

Cavanaugh Road will provide the main entryway for the three PA-8 parcels, as well as PA-9, in Port Colorado Subarea 2. Cavanaugh Road currently does not exist in the study area but is planned to extend from 32nd Avenue to 48th Avenue just south of the Air and Space Port.

Imboden Road/Quail Run Road currently does not exist but is planned to provide access from Imboden Road/Quail Run Road to 32nd Avenue, then to the new interchange at I-70.

Quail Run Drive, similar to Cavanaugh Road, does not currently exist but will provide access to parcels 6, 7, 8A, & 9 within Port Colorado Subarea 2. It will extend from 32nd Avenue to 48th Avenue, south of the Air and Space Port.

Imboden Road/Quail Run Road is a two-lane paved roadway extending from US 36 on the south to 144th Avenue on the north. This roadway will be the main access to parcels 5 and 2 in the Subarea 2 development.

32nd, 42nd, 48th, & 56th Avenues

These roadways have an east/west orientation and are separated by a one-mile distance. 32nd Avenue is a planned roadway from Manila Road to Imboden Road/Quail Run Road and will provide connectivity between Manila Road, Cavanaugh Road, Quail Run Drive, and Imboden Road/Quail Run Road.

42nd Avenue is planned to be a local roadway providing access to parcels 8A, 8B, 8C, and 9 within Subarea 2.

48th Avenue is an unmarked paved roadway with a width of 20 feet in the study area. It provides connectivity from Manila Road to Imboden Road/Quail Run Road Drive and, with the development of Subarea 2, will provide access to parcels 2, 3, 4, 5, 6, 8A, and 8B.

56th Avenue is currently an unpaved roadway from Imboden Road/Quail Run Road Drive to Imboden Road/Quail Run Road. However, in the future, this roadway is planned to be a regional connector and will provide access to E-470 to the west.

II.C. Rail Facility

The UPRR parallels the southern boundary of Port Colorado. The UPRR trackage extends from the Denver metropolitan area to the east into Kansas and points beyond. There is only one track within the railroad right-of-way; approximately three trains use this track each day.

II.D. Traffic Volumes

Existing traffic volumes were recorded at Imboden Road/Quail Run Road with 56th Avenue in February 2020 and traffic counts were recorded in September of 2018 and grown at a rate of two percent per year to reflect 2023 conditions. These movements were recorded during the AM and PM peak hours, the typical time periods when vehicle activity is greatest. As shown on **Figure 3**, vehicle volumes are quite low when compared to traffic volume levels in other parts of the Denver metropolitan area. The majority of movements are less than 100 vehicles per hour (vph). **Appendix A** includes the recorded traffic volume data.

II.E. Traffic Control

Control of vehicle movements at intersections surrounding Port Colorado Subarea 2 is carried out via stop signs. All stop signs are used on the “minor” street intersection approaches where vehicle right-of-way assignment is necessary.

II.F. Traffic Operations

Traffic operations within the study area were evaluated according to techniques documented in the *Highway Capacity Manual, 6th Edition* (Transportation Research Board, 2016) using the existing traffic volumes, intersection geometry, and traffic control. Level of Service (LOS) is a qualitative measure of traffic operational conditions based on roadway capacity and vehicle delay. LOS is described by a letter designation ranging from A to F, with LOS A representing almost free-flow travel, while LOS F represents congested conditions. Synchro 11 software was used to evaluate how well the existing intersection is operating.

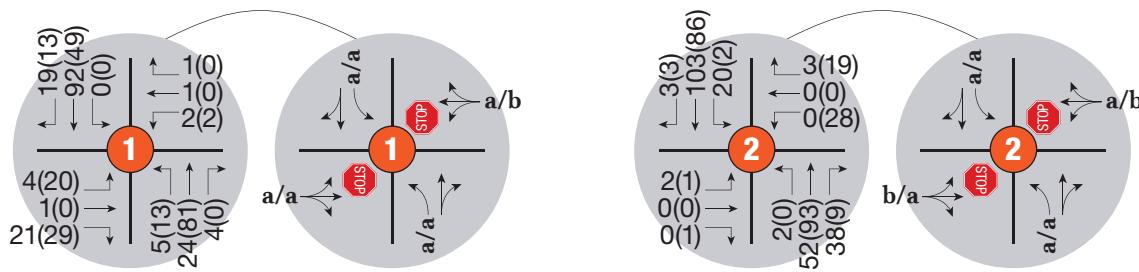

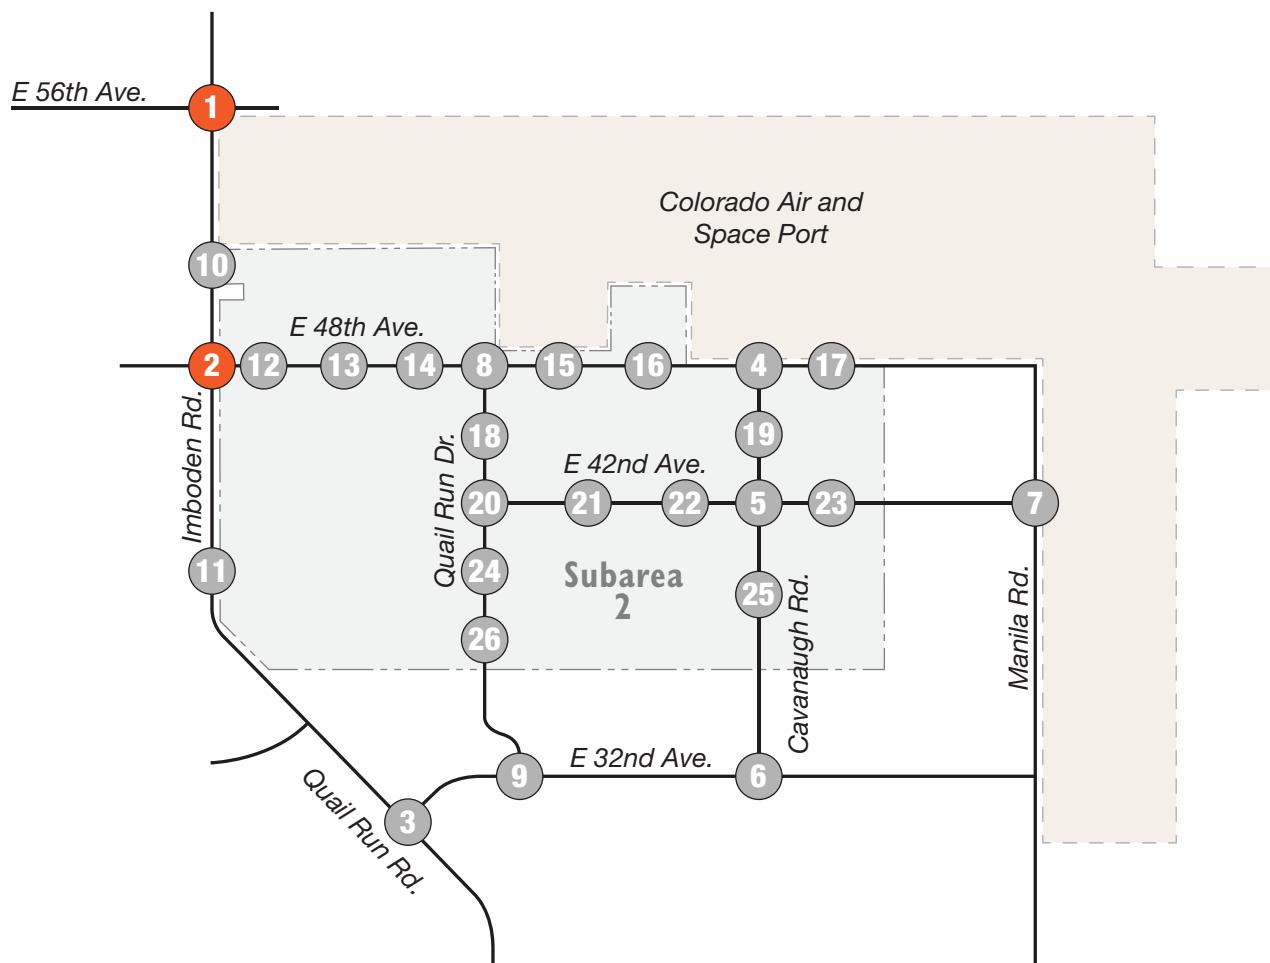

For stop-controlled intersections, LOS is calculated for each vehicle movement that must yield the right-of-way to an oncoming or crossing vehicle. In urbanized areas, LOS D is typically considered to be acceptable for peak hour traffic operations and is the standard set in the City of Aurora Traffic Impact Study guidelines.

Figure 3 shows the existing traffic control, intersection geometry, and results of the LOS analyses. **Appendix B** includes the LOS criteria, and **Appendix C** includes the analysis worksheets. All movements currently operate within acceptable parameters, at LOS B or better during peak hours, with most movements operating at LOS A. **Table I** outlines the LOS and delay by movement for the study intersection for existing conditions.

Table I. Existing Conditions LOS and Delay Summary

Intersection		Movement	Existing Conditions	
			AM LOS (delay [sec])	PM LOS (delay [sec])
1	Imboden Road/Quail Run Road & 56 th Avenue	EBLTR	a (9.3)	a (9.5)
		WBLTR	a (9.6)	b (10.2)
		NBL	a (7.6)	a (7.5)
		SBL	a (0.0)	a (0.0)
2	Imboden Road/Quail Run Road & 48 th Avenue	EBLTR	b (10.5)	a (9.6)
		WBLTR	a (8.8)	b (10.0)
		NBL	a (7.6)	a (0.0)
		SBL	a (7.6)	a (7.6)

III. PORT COLORADO SUBAREA 2 SITE TRAFFIC

III.A. Site Trip Generation

Trip generation estimates for Port Colorado Subarea 2 are based on information contained in *Trip Generation*, 10th Edition, by the Institute of Transportation Engineers (ITE), 2017, and custom rates based on user provided data from other nearby developments within Aurora. Through correspondence with the City of Aurora, the Data Center and Warehouse land use categories were used for the trip generation estimates for all industrial sites. The user defined data for Data Center indicates a 1.47 million square foot facility would have 432 employees and expect 180 truck deliveries per day. It was determined that this results in a daily trip generation of 1,310 trips and equates to a rate of 0.89 trips per 1,000 SF. This is approximately a 10 percent reduction as compared to data provided by ITE for Data Center Land Use Code #160. The Warehousing uses utilize ITE provided data for High-Cube Transload and Short-Term Storage Warehouse Land Use Code #154. **Table 2** details the results of these estimates.

Table 2. Colorado Subarea 2 Trip Generation Estimates

Planning Area	Land Use	Developable Acreage	Potential Building Square Footage (KSF) ¹	Land Use % of Acreage	Land Use Size (KSF)	Daily Vehicle -Trips	AM			PM

The equations and directional splits that follow were extracted from the *Trip Generation Manual, 11th Edition, ITE, 2021* to formulate the trip generation shown on **Table 2**. Note that the Data Center rates below takes a 10 percent reduction to the rates from the manual based on the user defined data presented earlier in this section. It should be noted that the *TransPort Colorado Traffic Impact Study Analysis, July 2022* used the 10th edition of the Trip Generation Manual, as that was current at the time, and rates used in this study may differ.

Data Center

	Average Rate	Split
Daily:	$T=0.89*x$	In: 50% Out: 50%
AM Peak:	$T=0.09*x$	In: 55% Out: 45%
PM Peak:	$T=0.08*x$	In: 30% Out: 70%

High-Cube Transload and Short-Term Storage Warehouse

	Average Rate	Split
Daily:	$T=1.71*x$	In: 50% Out: 50%
AM Peak:	$T=0.17*x$	In: 77% Out: 23%
PM Peak:	$T=0.18*x$	In: 28% Out: 72%

Due to both the large size and relative isolation of the Port Colorado development, it is estimated that there will be additional interactions that take place between the industrial land uses and the mixed-use parcels that would result in trips to the adjacent roadway network but not to the regional transportation network. An additional 9 percent of traffic to/from Subarea 5 is projected to interact with the industrial planning areas. This percentage is consistent with the interactions seen between the TAZ in the *NEATS Refresh* model that represents Subarea 5 and the other two TAZs that encompass Port Colorado. Therefore, along with the above shown trip generation estimates, an internal trip capture estimate related to movements to/from Subarea 5 of Port Colorado is included in background traffic, which will generate trips to and from parcels within Subarea 2. Subarea 5 is anticipated to be mixed use with retail, restaurants, and hotels that will have a sub-regional draw from the rest of Port Colorado beyond the internal capture within Subarea 5 itself. Although this internal capture will make trip generation from the year 2040 to the Long-Term horizon slightly different, the Long-Term trip generation is shown on **Figure 4** as a conservative representation. It was assumed that approximately 9 percent of trips generated by Subarea 5 would be to and from other parcels within Port Colorado including Subarea 2.

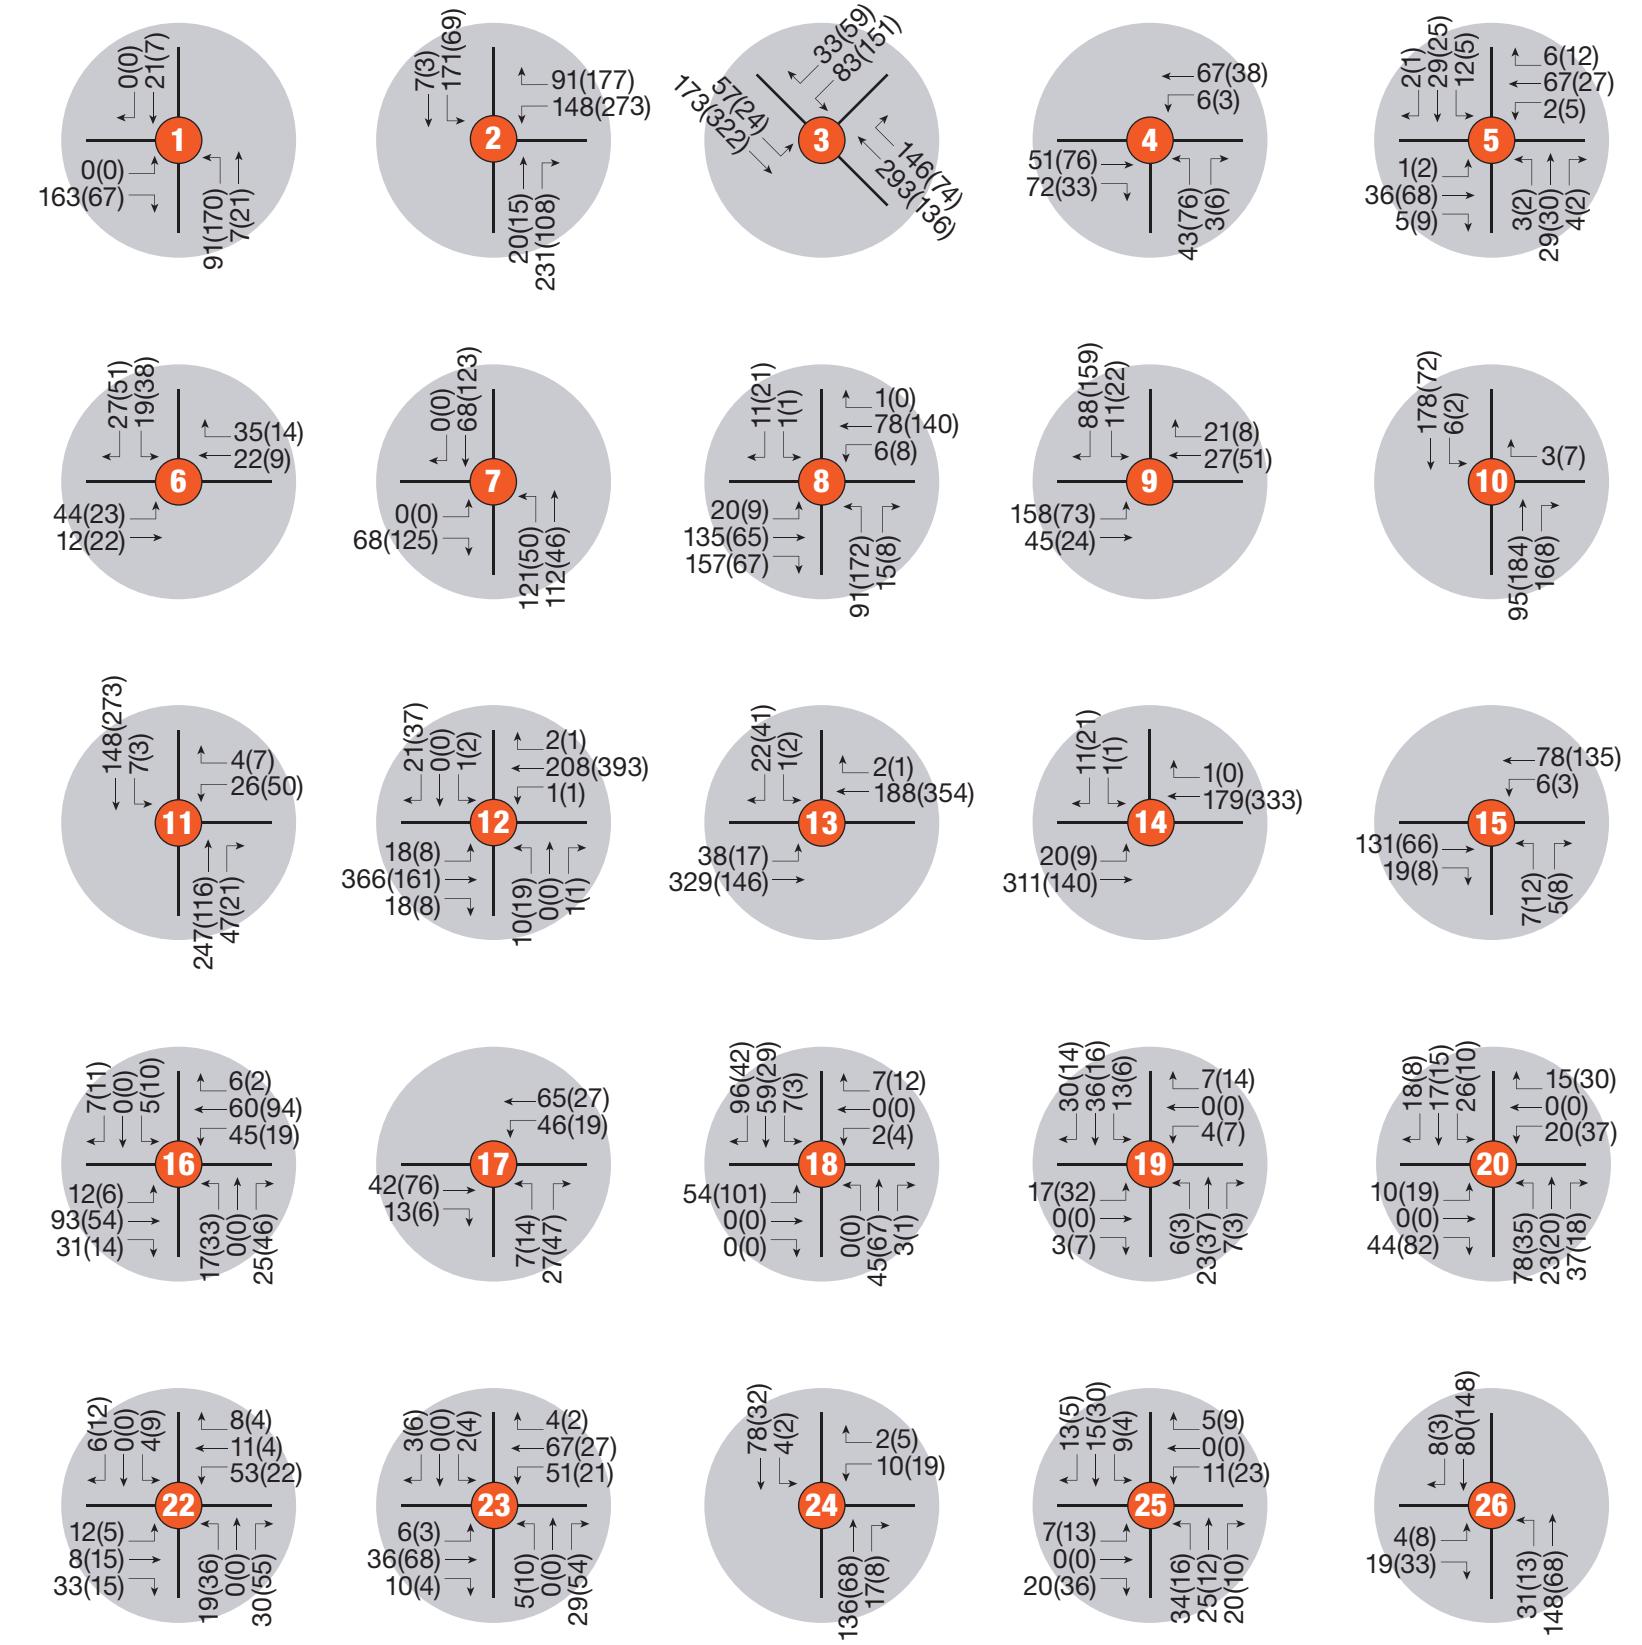

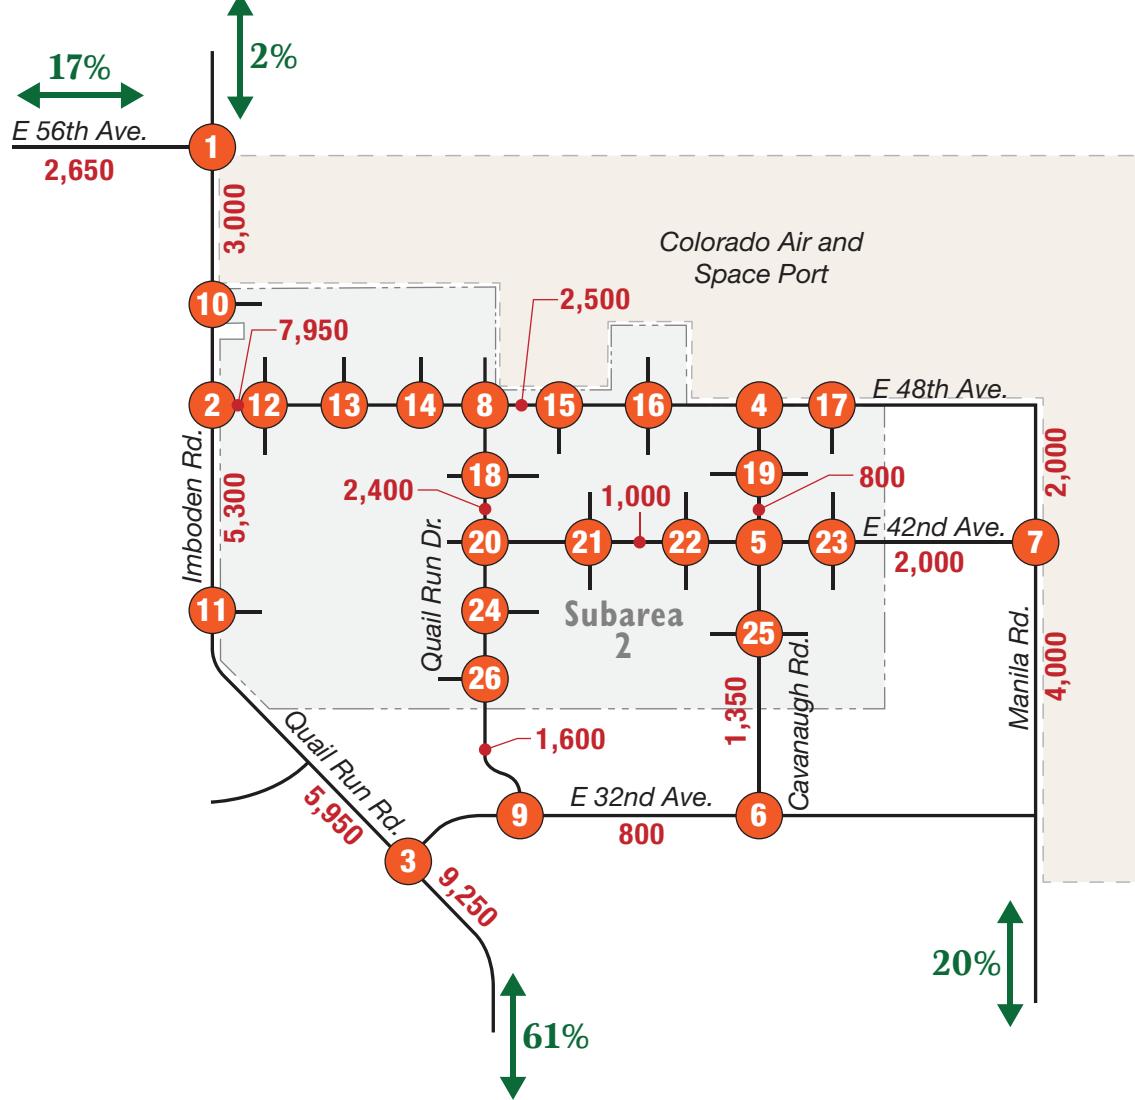

Of note, the current proposal for Subarea 2 represents a significant decrease in projected traffic when compared to the *TransPort Colorado Traffic Impact Study Analysis, July 2022*. Previous estimates of daily traffic were 18,242 trips. The current proposal represents a 17 percent daily reduction in traffic for the parcels within Subarea 2. This is largely a result of a shift to a land use mix that is 75 percent Data Center and 25 percent Warehousing as compared to the previous assumption of a 50/50 split. This change has been made at the request of the Port Colorado as market data suggests that there is a higher demand for Data Center than previously assumed.

III.B. Trip Distribution and Traffic Assignment

Trip distribution estimates for this site were based on those used in the master traffic study. The greatest component of site traffic will be toward Imboden Road/Quail Run Road, which will afford regional connectivity via the new interchange with I-70.

Figure 4 shows the site-trip distribution percentages for the Short- and Long-Term scenarios and the volumes resulting from applying those percentages to the site generated traffic. Imboden Road/Quail Run Road is the primary access route to/from Subarea 2, and it sees the highest levels of site traffic at about 9,250 daily trips south of 32nd Avenue. Other notable roadways that carry large volumes of site traffic include 48th Avenue immediately east of Imboden Road/Quail Run Road at 7,950 daily trips and 32nd Avenue at 800 daily trips immediately east of Imboden Road/Quail Run Road.

Trip Distribution

IV. BACKGROUND CONDITIONS

IV.A. Roadway Network Plan

The City of Aurora updated the *Northeast Area Transportation Study Refresh (NEATS Refresh)* in October 2018. This publication summarizes the buildout transportation recommendations for the NEATS Refresh planning area for the roadway, transit, and trail systems. The boundary for this study effort was approximately between Picadilly Road on the west, Schumaker Road on the east, Jewell Avenue and I-70 on the south, and 72nd Avenue on the north.

Besides an assessment of roadway improvement needs, future transit hubs were identified at two locations and a trail element was identified within the Port Colorado Subarea 2 study area. Relative to the Subarea 2 area, the following improvements were identified and are defined in *NEATS Refresh*:

Freeway Access

- New interchange constructed at the Imboden Road/Quail Run Road alignment along I-70

Major Arterials

- Manila Road – 4 Lanes
- 56th Avenue – 4 Lanes
- 48th Avenue – 4 lanes
- Imboden Road/Quail Run Road – 4 lanes
- Imboden Road/Quail Run Road – 4 lanes

Minor Arterials

- US 36 – 2 Lanes
- Quail Run Drive – 2 lanes

Potential UPRR Grade-Separated Crossings

- Manila Road – at US 36
- Imboden Road/Quail Run Road – at US 36

It should be noted that the above improvements are based on 2040 forecasts for the *NEATS Refresh* area; however, some of the identified improvements were made based on future planning considerations and not solely traffic volume based. Additionally, current development plans for Port Colorado were not entirely known when *NEATS Refresh* was prepared nor the neighboring site to Port Colorado Subarea 6, the Rocky Mountain Rail Park. **Appendix D** includes an illustration of these suggested improvements from *NEATS Refresh*.

IV.B. Background Traffic Volumes

Background traffic volume projections began with information contained in *NEATS Refresh*. Anticipated regional background traffic was added to the expected volumes generated by the remainder of the Port Colorado developments to arrive at a final background scenario for both Short and Long-Term. As such, the traffic volumes represented on **Figure 5** (2040) and **Figure 6** (Long-Term) contain projected Background traffic volumes.

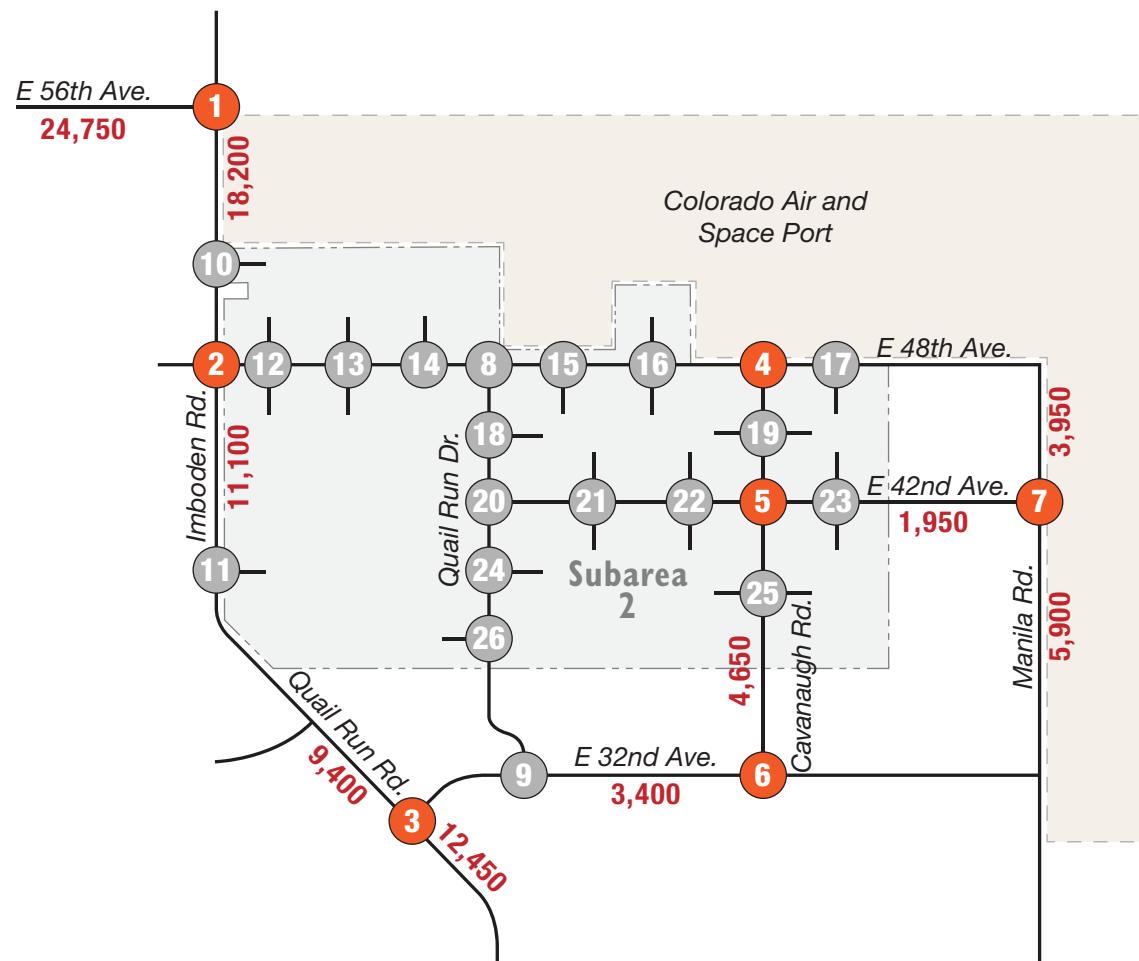

The *NEATS Refresh* travel demand model is considered a more accurate model for this area of Aurora since it has been modified with additional land use information given current and planned development proposals. The Denver Regional Council of Governments (DRCOG) model is not considered as accurate for these reasons.

The *NEATS Refresh* traffic volumes have also been supplemented with projections contained within both the *TransPort Colorado Traffic Impact Study Analysis*, July 2022, prepared by Felsburg Holt & Ullevig, and the *Rocky Mountain Rail Park TIS*, July 2018, prepared by Kimley-Horn and Associates.

IV.C. Pedestrian Trail Connection

North of the Subarea 2 development and to the west of the Colorado Air and Space Port, a future pedestrian trail is planned adjacent to Bear Gulch. All roadways will be built to *NEATS Refresh* standards, which include bike and pedestrian amenities in the standard cross-sections.

Traffic Conditions

IV.D. Background Traffic Operations

An evaluation of intersection operations was conducted for the AM and PM peak hours using the methodologies of the *Highway Capacity Manual* for unsignalized intersections and Synchro for signalized intersections. The results of these analyses find that certain improvements will be necessary to provide acceptable vehicle operations during the AM and PM peak hours. LOS D or better can be achieved with the traffic control recommendations of **Figure 5** for Short-Term operations in the year 2040 when Subarea 2 is assumed to be fully constructed and **Figure 6** for Long-Term conditions. **Table 3** and

Table 4 outline the LOS and delay by movement for each study intersection, as well as the overall LOS for signalized intersections for the Short-Term and Long-Term Background conditions.

		SBR	a (9.7)	c (17.9)

¹HCM does not support clustered intersections. Delay and LOS uses synchro methodology and is additive from cross-over and main intersection delay values.

The following improvements are assumed as Short-Term Background improvements in support of traffic growth, including buildup of the Rocky Mountain Rail Park and further development within Port Colorado, that would influence traffic at study area intersections:

Short-Term (2040) Improvements

- Build 56th Avenue, 48th Avenue, Manila Road, Imboden Road/Quail Run Road, and Imboden Road/Quail Run Road with a 4-lane cross-section
- Build 32nd Avenue, 42nd Avenue, and Cavanaugh Road with a 3-lane cross-section
- Signalize the 56th Avenue/Imboden Road/Quail Run Road intersection, providing exclusive left turn lane and dual right turn lanes on the eastbound approach, dual left turn lanes on the northbound approach, and an exclusive right turn lane on the southbound approach

- Signalize the 48th Avenue/Imboden Road/Quail Run Road intersection, providing dual exclusive left shared through/right and an exclusive right turn lane on the westbound approach, as well as dual southbound left turn lanes.
- Signalize the 32nd Avenue/Imboden Road/Quail Run Road intersection, providing left and right exclusive turn lanes on the south-westbound approach, as well as an exclusive right turn lane and left turn lane on the north-westbound and south-eastbound approaches, respectively
- Implement stop control on Cavanaugh Road at its intersection with 32nd Avenue, providing exclusive left and right turn lanes on the southbound approach
- Implement stop control on Cavanaugh Road at its intersection with 48th Avenue
- Implement stop control on 42nd Avenue at its intersection with Cavanaugh Road, providing an exclusive left turn lane on the westbound approach
- Implement stop control on 42nd Avenue at its intersection with Manila Road, providing left and right turn lanes at the T-intersection, as well as a northbound left turn lane

Signalization of all above intersections is projected to be needed based on review of Warrant I Condition A, Minimum Eight-Hour Vehicular Volume; Warrant I Condition B, Interruption of Continuous Traffic; Warrant I Condition C, Minimum Eight-Hour Vehicular Volume and Interruption of Continuous Traffic; Warrant 2, Four-Hour Vehicular Volume; and Warrant 3, Peak Hour Volume, contained in the *Manual on Uniform Traffic Control Devices* (MUTCD). Estimates have been made for hours 3–8 for the multi-hour warrants based on typical daily distributions and represent an approximation of whether warrants could be met in the future. The warrant graphs are included in **Appendix G**.

The following additional improvements are anticipated for Long-Term conditions in addition to those presented previously.

Long-Term Improvements

- Widen Imboden Road/Quail Run Road and Imboden Road/Quail Run Road to three lanes per direction between the I-70 ramp terminal intersections and 56th Avenue
- Widen Imboden Road/Quail Run Road to a 4-lane cross-section north of 56th Avenue
- Build Quail Run Drive with a three-lane cross-section
- Provide triple rights and an exclusive left turn lane on the eastbound approach, triple lefts and an exclusive right on the northbound approach, dual lefts and an exclusive right on the westbound approach, and one exclusive left and right lane on the southbound approach of the 56th Avenue/Imboden Road/Quail Run Road intersection
- Provide dual lefts on the southbound approach and an exclusive right turn lane on the northbound approach at the intersection of Imboden Road/Quail Run Road with 48th Avenue
- Add a southwest leg to the 32nd Avenue/Imboden Road/Quail Run Road intersection and provide exclusive left and right turn lanes on the northwest and southeast approaches, a single left turn lane on the north-eastbound approach, and dual lefts on the south-westbound approach

Operational analysis worksheets for Subarea 2 background conditions are included in **Appendix E**. Heavy vehicle percentages of 25 percent were used in the AM and PM peak hours for the operational analyses. This is consistent with percentages for sites with similar land use mixes.

The noted improvements for Short-Term and Long-Term have been included in the operational analyses for the respective timeframes.

All future intersection laneage will be determined at the time of parcel platting but are expected to have one inbound and one outbound lane at each access point.

V. TOTAL CONDITIONS

V.A. Roadway Network Plan

Buildout roadway improvements are consistent with the NEATS Refresh improvements presented in **Section IV** with the exception of expansion of Quail Run Road/Imboden Road from a four-lane to a six-lane cross-section in support of development traffic. As previously stated, some of these improvements are in the context of complete construction of the NEATS Refresh study area, which is an undefined year beyond 2040.

Additional roadway network improvements within Port Colorado Subarea 2 include the following:

- Construction of all site accesses
- Implementation of stop signs on all site accesses approaches

V.B. Buildout Volumes

The Short-Term and Long-Term total traffic has been estimated using the site generated traffic found on **Figure 4**, combined with background traffic for short-term on **Figure 5** and long-term on **Figure 6**. The resulting volumes can be found on **Figure 7** for short-term and **Figure 8** for long-term conditions. Imboden Road/Quail Run Road is anticipated to be the heaviest traveled roadway, with a projected daily volume of 27,450 in 2040 and 45,150 in the Long-Term just south of 32nd Avenue. The heaviest traveled roadway within Subarea 2 is anticipated to be 48th Avenue, with a projected volume of 13,150 in the Short-Term and 15,300 in the Long-Term just east of Imboden Road/Quail Run Road.

V.C. Buildout Traffic Operations

An evaluation of buildout volumes was conducted for the volumes presented on **Figure 7** for short-term and on **Figure 8** for long-term. The results of these operational analyses are presented on **Figure 9** for short-term and on **Figure 10** for long-term.

Most site access locations are anticipated to operate acceptably at LOS D or better as side-street stop-controlled intersections with one lane approaches from the driveway and a three-lane cross-section for the roadway network internal to the site with the exception of the following:

Intersection 7

- Northbound left turn anticipated to operate at LOS F during the AM and PM peak hour

Intersection 9

- Southbound left turn anticipated to operate at LOS F during the AM and LOS E during the PM peak hour

It is not uncommon for side street movements to experience excessive delay during peak hours, and these intersections are not anticipated to meet signal warrants; therefore, no improvements are recommended.

All signalized intersections in the study area are anticipated to operate acceptably at LOS D or better during peak hours given the improvements shown on **Figure 9** and **Figure 10**. Operational analysis worksheets for Subarea 2 total conditions are included in **Appendix F**. **Table 5** and **Table 6** outline the LOS and delay by movement for each study intersection, as well as the overall LOS for signalized intersections for the short-term and long-term buildout conditions.

V.D. Port Colorado Master Network Differences

The Port Colorado Master Study, *TransPort Colorado Traffic Impact Study Analysis*, July 2022, outlines the following roadway network geometry by 2040 for the Subarea 2 roadways:

3-Lane Arterial

- 56th Avenue
- 48th Avenue
- 32nd Avenue
- Quail Run Drive
- Cavanaugh Road
- 42nd Avenue

4-Lane Minor Arterial

- Imboden Road/Quail Run Road
- Manila Road

The following recommendations have emerged from this study:

3-Lane Arterial

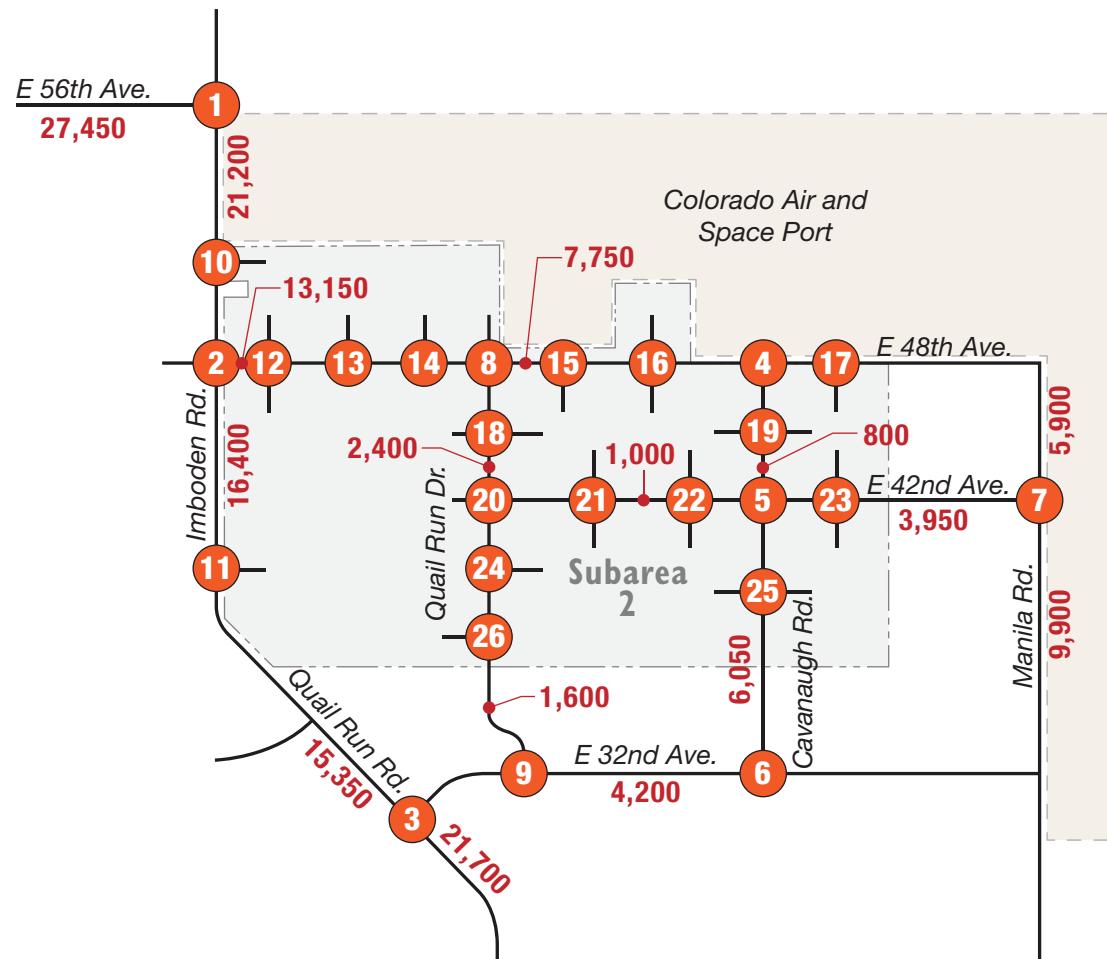

- 32nd Avenue
- Quail Run Drive
- Cavanaugh Road
- 42nd Avenue

4-Lane Minor Arterial

- 56th Avenue
- Imboden Road/Quail Run Road
- 48th Avenue
- Manila Road

As can be seen from the above, 56th Avenue and 48th Avenue will need to be increased from a 3-lane roadway to a 4-lane roadway in light of new anticipated surrounding development. All other roadways are anticipated to operate acceptably given the cross-sections provided in the master study. The expanded roadway cross-sections reported in this study do however remain consistent with the ultimate buildout reported in *TransPort Colorado Traffic Impact Study Analysis*, July 2022. The reason for the increases by 2040 is the result of a faster anticipated development of Subarea 2 as compared to that previous analysis.

Long Term Total LOS Summary				
Intersection #	Intersection	Movement	AM LOS (Delay [sec])	PM LOS (Delay [sec])
	PA-7 Access & Quail Run Drive	NBL	a (8.1)	a (7.9)

¹HCM does not support clustered intersections. Delay and LOS uses synchro methodology and is additive from cross-over and main intersection delay values.

V.E. Queueing Analysis

Appendix H shows the 95th percentile projected queue length for the AM and PM peak hours for all study scenarios. Output from the traffic analysis effort was used to recommend these storage lengths, using the following methodology:

- **Left turn lane storage lengths.** At signalized intersections, the greater of the HCM 6th Edition or Synchro methodology queue calculations was reported. For unsignalized intersections, the HCM 6th Edition calculation was reported.
- **Through movements.** For signalized intersections, Synchro calculation results were reported. No through movement queues are reported for unsignalized intersections as the through movements are not required to stop.
- **Right turn movements.** The Synchro queue length was used. HCM 6th Edition information was not used because HCM's signalized intersection methodology does not account for right turns on red.

Deceleration lane and taper lengths should be added to these dimensions per City of Aurora standards to identify the total length of each auxiliary lane. Upon the development of site plans, more detailed traffic impact studies should be prepared to confirm/refine the above queue lengths as well as all of the study area intersection operations.

VI. SUMMARY AND RECOMMENDATIONS

Port Colorado, formerly TransPort Colorado, is planning to develop Subarea 2 of their master-planned business and industrial park in the City of Aurora, Colorado. Subarea 2 is an 1,890-acre parcel, bounded north-south by 56th Avenue and 32nd Avenue, and east-west by Manila Road and Imboden Road/Quail Run Road. The project will be developed with light industrial land uses.

The project is located adjacent to the Colorado Air and Space Port (Space Port), formerly known as the Front Range Airport, and it is also within close proximity of Denver International Airport. The development of the Rocky Mountain Rail Park, an industrial rail-served project, is also anticipated to the west of Peterson Road.

Port Colorado will have access to I-70, a major east-west interstate highway system via a planned interchange at Imboden Road/Quail Run Road as well as the existing interchanges at Watkins Road and Manila Road. Watkins Road has been identified for future improvements by Arapahoe County in recent planning studies in support of significant development plans south of I-70 most notably the master planned Prosper development. Improvements at the interchange of Manila Road and I-70 have also been identified as part of the Port Colorado Master TIS but are not anticipated to be necessary with the development of Subarea 2 under the assumption of Quail Run interchange serving that area of development. All interchange work along I-70 will need to follow the CDOT 1601 process to gain approval from CDOT and FHWA.

The existing roadway network surrounding Port Colorado Subarea 2 is somewhat limited, and numerous improvements will need to be made to support background traffic in the area even without development of Port Colorado Subarea 2. Those improvements include the following.

Short-Term Background Improvements

- Build 56th Avenue, 48th Avenue, Manila Road, Imboden Road/Quail Run Road, and Imboden Road/Quail Run Road with a 4-lane cross-section
- Build 32nd Avenue, 42nd Avenue, and Cavanaugh Road with a 3-lane cross-section
- Signalize the 56th Avenue/Imboden Road/Quail Run Road intersection, providing an exclusive left turn lane and dual right turn lanes on the eastbound approach, dual left turn lanes on the northbound approach, and an exclusive right turn lane on the southbound approach
- Signalize the 48th Avenue/Imboden Road/Quail Run Road intersection, providing dual left, shared through/right, and exclusive right lanes on the westbound approach, as well as a dual southbound left turn lanes.
- Signalize the 32nd Avenue/Imboden Road/Quail Run Road intersection, providing left and right exclusive turn lanes on the south-westbound approach, as well as an exclusive right turn lane and left turn lane on the north-westbound and south-eastbound approaches respectively
- Implement stop control on Cavanaugh Road at its intersection with 32nd Avenue, providing exclusive left and right turn lanes on the southbound approach
- Implement stop control on Cavanaugh Road at its intersection with 48th Avenue
- Implement stop control on 42nd Avenue at its intersection with Cavanaugh Road, providing and exclusive left turn lane on the westbound approach
- Implement stop control on 42nd Avenue at its intersection with Manila Road, providing left and right turn lanes at the T-intersection.

Long-Term Background Improvements

- Widen Imboden Road/Quail Run Road and Imboden Road/Quail Run Road to three lanes per direction between I-70 ramp terminal intersections and 56th Avenue
- Widen Imboden Road/Quail Run Road to a 4-lane cross-section north of 56th Avenue
- Build Quail Run Drive with a three-lane cross-section
- Provide triple rights and an exclusive left turn lane on the eastbound approach, triple lefts and an exclusive right on the northbound approach, dual lefts, and an exclusive right on the westbound approach, and one exclusive left and right lane on the southbound approach of the 56th Avenue/Imboden Road/Quail Run Road intersection
- An alternative for 56th Avenue/Imboden Road/Quail Run Road would be to create a CFI, instead of providing triple rights and triple lefts which could potentially be a very large intersection to sustain a high volume of traffic
- Provide dual lefts on the southbound approach and an exclusive right turn lane on the northbound approach at the intersection of Imboden Road/Quail Run Road with 48th Avenue
- Add a southwest leg to the 32nd Avenue/Imboden Road/Quail Run Road intersection and provide exclusive left and right turn lanes on the northwest and southeast approaches, a single left turn lane on the north-eastbound approach, and dual lefts on the south-westbound approach

The majority of roadways within the Port Colorado Subarea 2 network do not exist or are minor unpaved roadways. Port Colorado will construct new roadways that will serve the proposed land use types, and certain improvements replicate information contained in NEATS Refresh. The following roadway improvements will be necessary to support the Subarea 2 development.

Short-Term Total Improvements

- Add a northbound right turn lane to the intersection of 48th Avenue with Imboden Road/Quail Run Road
- Build Quail Run Drive and 42nd Avenue to a 3-lane cross-section
- Build all site access roadways and implement stop control on minor streets
- Consider adding right turn lanes at the following site access locations:
 - Northbound at intersection 11
 - Eastbound at intersection 13

Long-Term Total Improvements

- Add a second westbound right turn lane at the intersection of 48th Avenue with Imboden Road/Quail Run Road
- Add exclusive east and westbound right turn lanes at the intersection of Imboden Road/Quail Run Road with 32nd Avenue
- Signalize the intersection of 48th Avenue with Quail Run Drive when warranted
- Signalize the intersection of 48th Avenue with Cavanaugh Road when warranted
- Build Quail Run Drive and 42nd Avenue to a 3-lane cross-section
- Build all site access roadways and implement stop control on minor streets
- Consider adding right turn lanes at the following site access locations:
 - Northbound at intersection 11

- Eastbound at intersection 13

It should be noted that 56th Avenue and 48th Avenue are anticipated to require a 4-lane cross-section by the 2040 year, as compared to the 3-lane cross-section shown in the *TransPort Colorado Traffic Impact Study Analysis*, July 2022 due to new development anticipated in the surrounding area.

The development of Port Colorado Subarea 2 will be gradual over the next decade, and traffic operational analyses will continue as parcels develop to support the confirmation and construction timeframes for infrastructure improvements. Analyses of individual parcels will confirm intersection laneage, traffic control recommendations, along with identifying the appropriate timing of such improvements.

APPENDIX A. TRAFFIC COUNTS

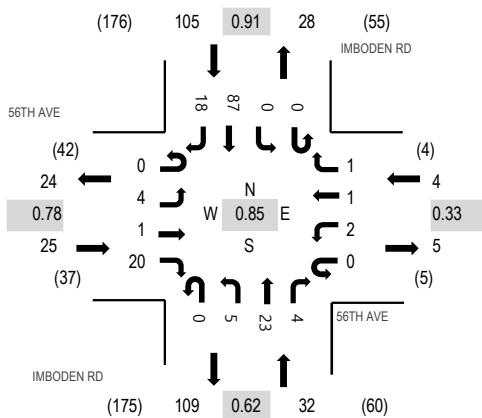

Location: 1 IMBODEN RD & 56TH AVE AM

Date: Thursday, February 6, 2020

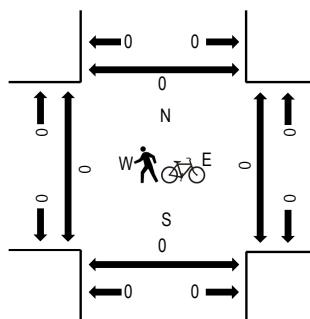

Peak Hour: 06:30 AM - 07:30 AM

Peak 15-Minutes: 06:45 AM - 07:00 AM

Peak Hour - All Vehicles

Peak Hour - Pedestrians/Bicycles on Crosswalk

Note: Total study counts contained in parentheses.

APPENDIX B. LEVEL OF SERVICE CRITERIA

TABLE B1
LEVEL OF SERVICE CRITERIA FOR
TWO-WAY STOP CONTROLLED (TWSC) INTERSECTIONS AND ROUNDABOUTS

Level of Service	Delay Range (sec/veh)
A	0.0 – 10.0
B	>10.0 – 15.0
C	>15.0 – 25.0
D	>25.0 – 35.0
E	>35.0 – 50.0
F	> 50.0

Adapted from *Highway Capacity Manual*, Transportation Research Board, 2010.

TABLE B2
LEVEL OF SERVICE CRITERIA FOR SIGNALIZED INTERSECTIONS

Level of Service	Control Delay (sec/veh)	Qualitative Description
A	≤ 10.0	Good progression, short cycles, very few vehicle-stops.
B	>10.0 – 20.0	Good progression, and/or short cycle lengths, more vehicle-stops.
C	>20.0 – 35.0	Fair progression and/or longer cycle lengths, some individual cycle failures, many vehicle-stops
D	>35.0 – 55.0	Noticeable congestion and cycle failures, unfavorable progression, high v/c ratios, several stops.
E	>55.0 – 80.0	Limit of acceptable delay, poor progression, long cycles, high v/c ratios, frequent cycle failures.
F	> 80.0	Delay is unacceptable to most drivers, volume exceeds capacity, breakdown of traffic flow.

Adapted from *Highway Capacity Manual*, Transportation Research Board, 2010.

Intersection Summary

Cycle Length: 140

Actuated Cycle Length: 140

Offset: 0 (0%), Referenced to phase 2:NBTL and 6:SBTL, Start of Yellow

Natural Cycle: 140

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.94

Intersection Signal Delay (s/veh): 40.5

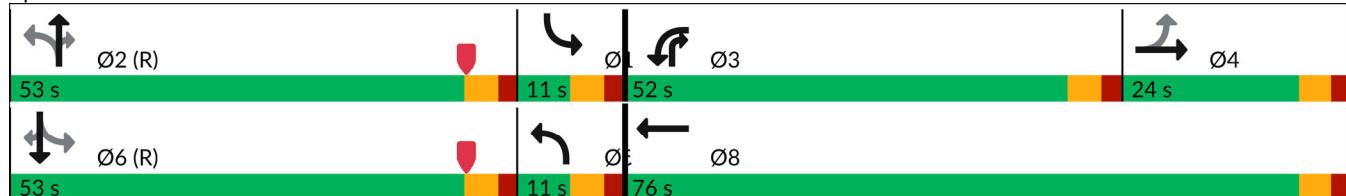

Intersection LOS: D

Intersection Capacity Utilization 66.1%

ICU Level of Service C

Analysis Period (min) 15

Splits and Phases: 3: Quail Run Rd & 32nd Avenue

HCM 6th Signalized Intersection Summary
3: Quail Run Rd & 32nd Avenue
