November 7, 2024

Mr. Chris Fellows  
Blue Eagle Metropolitan District No. 1  
9155 E. Nichols Avenue, Suite 360  
Centennial, CO 80012

Re: Blue Eagle Technology Park  
Traffic Impact Analysis  
Aurora, CO  
LSC #230650

Dear Mr. Fellows:

In response to your request, LSC Transportation Consultants, Inc. has prepared this updated traffic impact analysis for the proposed Blue Eagle Technology Park to address City and CDOT comments. As shown on Figure 1, the site is located south of E. 26<sup>th</sup> Avenue and east of Monaghan Road in Aurora, Colorado.

## REPORT CONTENTS

The report contains the following: the existing roadway and traffic conditions in the vicinity of the site including the lane geometries, traffic controls, posted speed limits, etc.; the existing weekday peak-hour traffic volumes; the existing daily traffic volumes in the area; the typical weekday site-generated traffic volume projections for the site; the assignment of the projected traffic volumes to the area roadways; the projected short-term and long-term background and resulting total traffic volumes on the area roadways; the site's projected traffic impacts; and any recommended roadway improvements to mitigate the site's traffic impacts or the impacts from growth in background traffic.

## LAND USE AND ACCESS

The site is proposed to include 30.06 acres for commercial uses, 351.91 acres for industrial/warehouse uses, and 2.0 acres for a fire station. This report assumes Planning Area 1 will be developed with about 288,000 square feet of commercial floor space, Planning Areas 2, 3, and 4 will be developed with 4,269,000 square feet of floor space that will be used for a mix of warehouse logistics and data center uses and a fire station, and Planning Area 6 will be used for outdoor storage. Planning Area 5 is planned as open space. Figure 2a shows the proposed land use map. Access is proposed from multiple locations as shown in the circulation plan in Figure 2b. The existing at-grade rail road crossing just west of the Hayesmount Road alignment provides access to an existing home that will be removed - the existing access is not planned to be used as either a public or emergency access for the site.

**ROADWAY AND TRAFFIC CONDITIONS****Area Roadways**

The major roadways in the site's vicinity are shown on Figure 1 and are described below.

- **E. 26<sup>th</sup> Avenue** is an east-west, two-lane paved road north of the proposed site. The posted speed limit is 45 mph. The City of Aurora NEATS report shows E. 26<sup>th</sup> Avenue as a future four-lane Minor Arterial by 2040.
- **Monaghan Road** is a north-south, two-lane paved road west of the proposed site. The posted speed limit is 45 mph in the vicinity of the site. The City of Aurora NEATS report shows Monaghan Road as four-lane Major Arterial from E. Jewell Avenue to E. 26<sup>th</sup> Avenue and as a future four-lane Minor Arterial from E. 26<sup>th</sup> Avenue to E. 64<sup>th</sup> Avenue. The City of Aurora NEATS report shows a new grade-separated interchange at I-70 and Monaghan Road by 2040. This report assumes the north half of the grade-separated interchange at I-70 and Monaghan Road will **not** be constructed by the buildout year (2030) but will be in place by 2050.
- **Hayesmount Road** is a planned four-lane, minor arterial in the vicinity of the site between Monaghan Road and Hudson Road. The City of Aurora NEATS report shows Hayesmount Road extended north from E. Jewell Avenue across I-70 and over the U.P.R.R. railroad tracks as an overpass/flyover and extending north to E. 26<sup>th</sup> Avenue. Per discussion with City staff, the applicant has agreed to reserve an easement or the geometry for a future overpass/flyover, however, this report assumes the overpass will **not** be constructed by 2050. Per those same discussions with City staff the applicant will not be financially responsible for the overpass/flyover, beyond reservation of the geometry for same. See the Conclusions and Recommendation section later in this report for additional support for not including the overpass/flyover in the long term (2050) scenario.
- **Hudson Road** is a north-south, two-lane paved road east of the proposed site. The posted speed limit is 45 mph. The City of Aurora NEATS report shows future Hudson Road as a two-lane Minor Arterial.
- **Powhaton Road** is a north-south roadway west of the site without direct access to I-70. The City of Aurora NEATS report shows Powhaton Road as a three-lane Major Arterial north of E. 26<sup>th</sup> Avenue and a two-lane Major Arterial south of E. 26<sup>th</sup> Avenue.
- **Piccadilly Road** is a north-south roadway west of the site. The City of Aurora NEATS report shows Piccadilly Road as a three-lane Major Arterial. The City of Aurora and CDOT are currently constructing a new interchange at I-70 and Piccadilly Road.
- **Watkins Road** is a north-south, two-lane paved road east of the proposed site. The section of Watkins Road between E. Front Street South and E. Front Street North across the U.P.R.R. railroad tracks has not been constructed. This report assumes this section will not be constructed by 2030 but will be constructed by 2050. The NEATS report shows Watkins Road as a three-lane Major Arterial south of I-70 and a two-lane Minor Arterial north of I-70. The posted speed limit north of I-70 is 30 mph.

## Existing Traffic Conditions

Figure 3a shows the existing traffic volumes in the site's vicinity on a typical weekday. The weekday peak-hour traffic volumes and daily traffic counts are from the attached traffic counts conducted by Counter Measures in June and August, 2023. Figure 3b shows the existing lane geometries, traffic controls, and posted speed limits in the vicinity of the site.

## Background Traffic

Figure 4a shows the estimated 2030 background traffic volumes. The 2030 background traffic volumes are based on the existing traffic volumes shown in Figure 3a with a three percent growth rate per year applied. The 2030 background traffic volumes assume Monaghan Road and Hayesmount Road have not been constructed between I-70 and E. 26<sup>th</sup> Avenue and Watkins Road has not been constructed north across the railroad tracks to E. 26<sup>th</sup> Avenue. Figure 4b shows the projected 2030 background lane geometry and traffic control.

Figure 5a shows the estimated 2050 background traffic based on the 2040 traffic volumes from the City of Aurora NEATS reports and the 2040 traffic volumes shown in the August 2018 *The Aurora Highlands Traffic Impact Analysis* by Felsburg Holt & Ullevig, the April 19, 2019 *TransPort Colorado Revised Traffic Impact Analysis* by Felsburg & Ullevig, and the June 2018 letter regarding the Monaghan Material Facility by David Evans and Associates, Inc. Key pages from these reports have been attached for reference. The 2050 background traffic volumes assume a full grade-separated interchange at I-70 and Monaghan Road and assume Watkins Road has been extended north across the railroad tracks to E. 26<sup>th</sup> Avenue. The 2050 background volumes assume that Hayesmount Road has **not** been constructed as an overpass across I-70 and the U.P.R.R. railroad tracks by 2050. Figure 5b shows the projected 2050 background lane geometry and traffic control.

## Existing and Background Levels of Service

Level of service (LOS) is a quantitative measure of the level of congestion or delay at an intersection. Level of service is indicated on a scale from "A" to "F." LOS A is indicative of little congestion or delay and LOS F is indicative of a high level of congestion or delay. Attached are specific level of service definitions for signalized and unsignalized intersections.

The intersections in Figures 3a, 4a, and 5a were analyzed as appropriate to determine the existing and projected 2030 and 2050 background levels of service using Synchro Version 11 which utilizes the *Highway Capacity Manual*, 6<sup>th</sup> Edition methodology. Table 1a shows the existing level of service results, Table 1b shows the projected 2030 background level of service results, and Table 1c shows the projected 2050 background level of service results. The level of service reports are attached.

1. **E. 26<sup>th</sup> Avenue/Monaghan Road:** All movements at this unsignalized intersection currently operate at LOS "B" or better during both morning and afternoon peak-hours and are expected to do so through 2030. By 2050, this intersection is expected to be improved to provide two through lanes plus left- and right-turn lanes on each approach and

be converted to traffic signal control. As a signalized intersection it is expected to operate at an overall LOS "C" or better during both morning and afternoon peak-hours.

2. **E. 26<sup>th</sup> Avenue/West N/S Collector:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "B" or better through 2050.
3. **E. 26<sup>th</sup> Avenue/West Right-In/Right-Out Access:** This intersection was analyzed only in the total traffic scenarios.
4. **E. 26<sup>th</sup> Avenue/Middle N/S Collector:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "B" or better through 2050.
5. **E. 26<sup>th</sup> Avenue/East N/S Collector:** This intersection was analyzed only in the total traffic scenarios.
6. **E. 26<sup>th</sup> Avenue/Hayesmount Road:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "B" or better through 2050.
7. **E. 26<sup>th</sup> Avenue/Hayesmount Road:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "B" or better through 2050.
8. **E. 26<sup>th</sup> Avenue/Hudson Road:** All movements at this existing stop-sign controlled intersection, with stop control on the eastbound and westbound approaches, currently operate at LOS "B" or better and are expected to do so through 2030. By 2050 it was assumed that 26<sup>th</sup> Avenue would be widened to two through lanes in each direction and that at the time of the improvement stop-sign control would be switched to the northbound and southbound approaches. All movements are expected to operate at LOS "B" or better through 2050.
9. **Middle N/S Collector/Right-In/Right-Out Access:** This intersection was analyzed only in the total traffic scenarios.
10. **West N/S Collector/North E/W Collector:** This intersection was analyzed only in the total traffic scenarios.
11. **Middle N/S Collector/North E/W Collector:** This intersection was analyzed only in the total traffic scenarios.
12. **East N/S Collector/North E/W Collector:** This intersection was analyzed only in the total traffic scenarios.
13. **West N/S Collector/Middle E/W Collector:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "A" through 2050.
14. **Middle N/S Collector/Middle E/W Collector:** This intersection was analyzed only in the total traffic scenarios.

16. **South E/W Collector/Monaghan Road:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "A" through 2050.
17. **West N/S Collector/South E/W Collector:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "A" through 2050.
18. **Middle N/S Collector/South E/W Collector:** This intersection was analyzed only in the total traffic scenarios.
19. **Hayesmount Road/South E/W Collector:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "A" through 2050.
20. **Hudson Road/South E/W Collector:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "A" through 2050.
104. **E. Colfax Avenue (SH 36)/Hudson Road:** All movements at this stop-sign controlled intersection currently operate at LOS "B" or better during the peak hours and are expected to continue to do so through 2050.

## TRIP GENERATION

Table 2a shows the estimated average weekday, morning peak-hour, and afternoon peak-hour trip generation for the proposed site based on the rates from *Trip Generation*, 11<sup>th</sup> Edition, 2021 by the Institute of Transportation Engineers (ITE) for the proposed land use. The trip generation analysis assumes Planning Areas 2, 3, and 4 will be developed with a mix of 30% ITE Land Use 154 - High-Cube Transload and Short-Term Storage Warehouse, 30% ITE Land Use 155 - High Cube-Fulfillment Center Warehouse, 10% ITE Land Use 156 - High-Cube Parcel Hub Warehouse, and 30% ITE Land Use 160 - Data Center. Planning Area 6 is planned to be used for outdoor storage. ITE does not have trip generation rates for this use. The number of site-generated vehicles expected was based on a trip generation study of similar sites in El Paso and Arapahoe County, Colorado, conducted by LSC in October 2023. The details are attached.

The currently proposed land use is projected to generate about 19,026 vehicle-trips on the average weekday, with about half entering and half exiting the site during a 24-hour period. During the morning peak-hour, which generally occurs for one hour between 6:30 and 8:30 a.m., about 666 vehicles would enter and about 402 vehicles would exit the site. During the afternoon peak-hour, which generally occurs for one hour between 4:00 and 6:30 p.m., about 863 vehicles would enter and about 943 vehicles would exit the site. These estimates are expected to be reduced due to internal and passby trips as shown in Table 2a. Detailed internal and passby trip calculations are shown in Table 2b. The percentage of the trips generated by the industrial uses that were assumed to be internal to the site were estimated based on the reductions allowed by the Colorado Department of Transportation (CDOT) per the *State Highway Access Code*. The internal trips entering and exiting the commercial parcels were then matched with trips estimated to enter and exit the industrial parcels.

A significant percentage of site traffic is expected to be mid- to large-sized trucks. Table 2c shows the estimated number of truck trips estimated to be generated by the site.

## TRIP DISTRIBUTION

Figure 6a shows the estimated directional distribution of the short-term and long-term site-generated traffic volumes on the area roadways. The estimates were based on the location of the site with respect to the regional population, employment, and activity centers; and the site's proposed land use. The short-term analysis assumes the I-70/Aerotropolis interchange and the I-70/Picadilly Road interchange are in place by 2030 but the north half of I-70 and Monaghan Road is not in place. The short-term distribution also assumes Watkins Road has not been constructed north across the U.P.R.R. railroad tracks to complete the segment between I-70 and E. 26<sup>th</sup> Avenue. The short-term analysis assumes site trips will use the E. Colfax Avenue (US 36)/Hudson Road intersection to head to/from the east but not to the west due to the roadway network in place at the time.

The long-term distribution estimate assumes completion of the Monaghan Road interchange and the Watkins Road extension. Both distribution estimates assume a future potential Hayes-mount Road flyover of I-70 and the U.P.R.R. railroad tracks will not be constructed by 2050.

Figures 6b through 6f show the directional distribution estimates of the turning movement at key off-site intersections for each of the proposed planning areas.

## TRIP ASSIGNMENT

Figures 7a and 7b show the estimated 2030 short-term site-generated traffic volumes based on the directional distribution percentages (from Figures 6a through 6f) and the trip generation estimate (from Table 2a).

Figures 8a and 8b show the estimated 2050 long-term site-generated traffic volumes based on the directional distribution percentages (from Figures 6a through 6f) and the trip generation estimate (from Table 2a).

Figures 7a and 8a show the trip assignment for the study area intersections. Figures 7b and 8b show the trip assignment of intersections or interchanges in the CDOT system. The intersection of E. Colfax Avenue (US 36)/Hudson Road was included in capacity analyses but the various interchanges were not. This is because the ultimate design is not yet known for many of the locations and the site trips are expected to be a relatively small percentage of the overall interchange traffic volumes.

## TOTAL TRAFFIC

Figure 9a shows the 2030 total traffic which is the sum of the 2030 background traffic volumes (from Figure 4a) and the 2030 short-term site-generated traffic volumes (from Figure 7a). Figure 9b shows the recommended 2030 lane geometry and traffic control.

Figure 10a shows the 2050 total traffic which is the sum of the 2050 background traffic volumes (from Figure 5a) and the 2050 long-term site-generated traffic volumes (from Figure 8a). Figure 10b shows the recommended 2050 lane geometry and traffic control.

## TRAFFIC SIGNAL WARRANT ANALYSIS

Tables 3 through 6 show the projected traffic volumes compared to the traffic volume thresholds for Traffic Signal Warrant 1 (Eight-Hour) from the *Manual on Uniform Traffic Control Devices for Street and Highway* (MUTCD) at the following intersections:

- E. 26<sup>th</sup> Avenue/Monaghan Road (#1) - Table 3 - warranted with 2030 Total Traffic
- E. 26<sup>th</sup> Avenue/West N/S Collector (#2) - Table 4 - warranted with 2050 Total Traffic
- E. 26<sup>th</sup> Avenue/Middle N/S Collector (#4) - Table 5 - not warranted by 2050
- E. 26<sup>th</sup> Avenue/Hayesmount Road (#6) - Table 6 - not warranted by 2050

The findings of Tables 3 through 6 are summarized in Table 7.

Figures 11 through 14 show the projected traffic volumes compared to the traffic volume thresholds for Traffic Signal Warrant 2 (Four-Hour) for the same intersections.

The off-peak traffic volumes were based on the peak-hour volumes, 24-hour traffic counts conducted on E. 26<sup>th</sup> Avenue and on Monaghan Road by Counter Measures in August, 2023 and vehicle time-of-day distribution data published by the Institute of Transportation Engineers.

## PROJECTED LEVELS OF SERVICE

The intersections in Figures 9a and 10a were analyzed to determine the 2030 and 2050 total levels of service based on the lane geometry and traffic control shown in Figures 9b and 10b. Table 1b shows the level of service analysis results for 2030 and Table 1c shows the level of service results for 2050. The level of service reports are attached.

1. **E. 26<sup>th</sup> Avenue/Monaghan Road:** By 2030 the southbound left-turn movement is expected to operate at LOS "F" during the afternoon peak-hour if this intersection remains stop-sign controlled. If it is converted to traffic signal control by 2030 this intersection is expected to operate at an overall LOS "B" or better during the peak-hours. By 2050, this intersection is expected to be improved to provide two through lanes plus left- and right-turn lanes on each approach and be converted to traffic signal control. As a signalized intersection it is expected to operate at an overall LOS "C" or better during both morning and afternoon peak-hours.
2. **E. 26<sup>th</sup> Avenue/West N/S Collector:** The northbound left-turn movement at this future stop-sign controlled intersection is expected to operate at LOS "E" during the afternoon peak-hour based on the projected 2030 and 2050 total traffic volumes. As shown in Table 4 this intersection is not projected to meet the criteria for an Eight-Hour Vehicular Volume Traffic Signal Warrant, however, as shown in Figure 12 it may meet the criteria for a Four-Hour Vehicular Volume Traffic Signal Warrant by 2050.
3. **E. 26<sup>th</sup> Avenue/West Right-In/Right-Out Acces:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "B" or better through 2050.
4. **E. 26<sup>th</sup> Avenue/Middle N/S Collector:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "D" or better through 2050.

5. **E. 26<sup>th</sup> Avenue/East N/S Collector:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "A" through 2050. The analysis assumes this intersection will be restricted to right-in/right-out only.
6. **E. 26<sup>th</sup> Avenue/Hayesmount Road:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "C" or better through 2050.
7. **E. 26<sup>th</sup> Avenue/Hayesmount Road:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "B" or better through 2050.
8. **E. 26<sup>th</sup> Avenue/Hudson Road:** All movements at this intersection are estimated to operate at LOS "B" or better through 2030 assuming it remains stop-sign controlled with stop control on the eastbound and westbound legs. Note that the 2030 total traffic volumes assume Watkins Road has not been constructed across the U.P.R.R. railroad tracks to provide a continuous segment between I-70 and E. 26<sup>th</sup> Avenue. By 2050 it was assumed that Watkins Road would be completed between I-70 and E. 26<sup>th</sup> Avenue and that 26<sup>th</sup> Avenue would be widened to two through lanes in each direction and that at the time of the improvement stop-sign control would be switched to the northbound and southbound approaches. All movements are expected to operate at LOS "B" or better through 2050.
9. **Middle N/S Collector/Right-In/Right-Out Access:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "B" or better through 2050.
10. **West N/S Collector/North E/W Collector:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "A" through 2050.
11. **Middle N/S Collector/North E/W Collector:** All approaches at this future one-lane modern roundabout are expected to operate at LOS "A" through 2050.
12. **East N/S Collector/North E/W Collector:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "A" through 2050.
13. **West N/S Collector/Middle E/W Collector:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "A" through 2050.
14. **Middle N/S Collector/Middle E/W Collector:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "B" or better through 2050.
16. **South E/W Collector/Monaghan Road:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "C" or better through 2050.
17. **West N/S Collector/South E/W Collector:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "C" or better through 2040.
18. **Middle N/S Collector/South E/W Collector:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "B" or better through 2050.

19. **Hayesmount Road/South E/W Collector:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "B" or better through 2050 with no consideration of a potential Hayesmount Road "flyover" connection over I-70 and the U.P.R.R. railroad tracks.
20. **Hudson Road/South E/W Collector:** All movements at this future stop-sign controlled intersection are expected to operate at LOS "B" or better through 2050.
104. **E. Colfax Avenue (SH 36)/Hudson Road:** All movements at this stop-sign controlled intersection currently operate at LOS "B" or better during the peak hours and are expected to continue to do so through 2050.

### **95<sup>TH</sup> PERCENTILE QUEUE LENGTHS AND RECOMMENDED TURN LANES**

The estimated 2030 and 2050 95<sup>th</sup> percentile queue lengths for the intersections in the study area are shown in Table 8. Table 8 also shows the recommended turn lane lengths based on the NR-B classification criteria in the *CDOT State Highway Access Code* and the projected 95<sup>th</sup> percentile queue lengths.

### **RECOMMENDED IMPROVEMENTS**

Table 9 shows the recommended improvements by 2030 and 2050. The recommended turn lane lengths are based on the criteria contained in the *CDOT State Highway Access Code* for the NR-B classification, the projected total traffic volumes shown in Figures 9a and 10a, and the projected 95<sup>th</sup> percentile queue lengths shown in Table 8. A design speed of 45 mph was assumed for all Major and Minor Arterial roadways, a design speed of 35 mph was assumed for Collector roadways, and a design speed of 25 mph was assumed for all Local roadways. Table 9 includes the site's percentage contribution to the 2050 total traffic for each recommended improvement.

The trip assignment shown in Figures 7b and 8b is the estimated impact to the various CDOT intersections or interchanges that exist or are planned in the area. These impacts are expected to be a relatively small percentage of the overall traffic expected at these locations.

### **CONCLUSIONS AND RECOMMENDATIONS**

#### **Trip Generation**

1. The site is projected to generate about 19,026 vehicle-trips on the average weekday, with about half entering and half exiting the site during a 24-hour period. During the morning peak-hour, about 666 vehicles would enter and about 402 vehicles would exit the site. During the afternoon peak-hour, about 863 vehicles would enter and about 943 vehicles would exit the site. These estimates are expected to be reduced due to internal and passby trips as shown in Table 2b.

**Projected Levels of Service**

2. The future signalized intersection of Monaghan Road/E. 26<sup>th</sup> Avenue (#1) is expected to operate at an overall LOS "B" or better through 2050 with the recommended improvements.
3. All movements at the unsignalized intersections, except for the intersection of E. 26<sup>th</sup> Avenue/West (#2), are expected to operate at LOS "D" or better through 2050 with the recommended improvements. The northbound left-turn movement at the intersection of E. 26<sup>th</sup> Avenue/West (#2) is expected to operate at LOS "E" during the afternoon peak-hour through 2050 with the recommended improvements. As shown in Table 4 this intersection is not projected to meet the criteria for an Eight-Hour Vehicular Volume Traffic Signal Warrant, however, as shown in Figure 12 it is expected to meet the criteria for a Four-Hour Vehicular Volume Traffic Signal Warrant by 2050.

**Hayesmount/I-70 Overpass/Flyover**

4. The applicant has expressed their views, position and comments relating to the Hayesmount overpass/flyover mentioned in NEATS. As agreed in a meeting with the City of Aurora staff and the applicant on June 14, 2024 this traffic study assumes the flyover will **not** be in place by 2050.
5. The capacity analysis shows that the future roadway network will function adequately without the overpass/flyover.
6. It is expected that little to no truck traffic going to or originating from Blue Eagle would utilize the overpass/flyover, should it ever be constructed, as the area south of I-70 is primarily residential and does not significantly connect to the regional roadway network.
7. A small number of passenger vehicle trips could potentially use the overpass/flyover, should it ever be constructed, to travel between the site and the Sky Ranch residential subdivision in Arapahoe County, however, there are multiple other paths available to/from the site.

**Conclusions**

8. This analysis finds the impact of the Blue Eagle Technology Park can be accommodated by the existing and proposed roadway network with implementation of the following recommendations.

**Recommendations**

9. The recommended improvements are shown in Figures 9b and 10b and Tables 8 and 9. Figure 9 provides the estimated site traffic percentage of the 2050 total traffic volume for each recommended improvement.
10. Over time, the applicant or its successors will construct all internal roadways and half of E. 26<sup>th</sup> Avenue, a four-lane minor arterial, that fronts the site as part of the development process. The timing of specific improvements will likely be determined with future compliance letters or filing specific traffic studies.

We trust our findings will assist you in gaining approval of the proposed Blue Eagle Technology Park. Please contact me if you have any questions or need further assistance.

Sincerely,

LSC TRANSPORTATION CONSULTANTS, INC.

## **Numbers of Hours the Warrant Thresholds Are Met**

**Warrant Met?**

---

### Notes:

- (1) Thresholds are based on 2 or more lanes on the major approach and 2 or more lanes on the minor approach with the 70% factor applied for a posted speed limit above 40 mph
  - (2) The major street traffic includes all movements (left, through, and right)
  - (3) The minor street traffic includes only the left-turn volume from the minor street

					SB LT - construct lane - 1 @ 200 feet and 120-foot transition taper	Others	---		

(1) A transition taper of 13.5:1 was used for Major and Minor Arterials based on a posted speed limit of 45 mph (160 feet). An appropriate redirect taper for 45 mph is 45:1  
A transition taper of 10:1 was used for all Collectors based on a posted speed limit of 35 mph (120 feet). An appropriate redirect taper for 35 mph is 20:1

(2) The percent impact due to Blue Eagle is the average of the 2050 morning peak hour site-generated traffic volumes divided by the 2050 total traffic volume and the 2050 afternoon peak hour site-generated traffic volumes divided by the 2050 total traffic volume  
(3) The easbound left-turn lane will not be required until the parcels north of E. 26th Avenue are developed, however, the applicant will be required to construct the entire south side of E. 26th Avenue along the site frontage including the eastbound left-turn lane

## **TRAFFIC IMPACT LETTER**

**TAB 16**

June 7, 2018

Victor Rachael  
Public Works Traffic Division  
15151 E Alameda Parkway, Suite 5200  
Aurora, CO 80012

**SUBJECT:**

**Monaghan Materials Facility (#1183742) Pre-application—Site Trip Generation**

Dear Mr Rachael,

David Evans and Associates, Inc. assisted Rock and Rail with verifying the anticipated opening year trip generation values for the proposed Monaghan Materials Facility located in Aurora, Colorado. This project is proposed to be located south of 26<sup>th</sup> Avenue and between Powhaton Road and Monahan Road. At this point in the application process, Rock and Rail is requesting feedback from the City of Aurora on possible road improvements that may be required for the project based on the estimated site trip generation information provided by Rock and Rail to determine the feasibility of construction of the proposed facility. At this time, a full Traffic Impact Study is not being performed. No traffic counts, analysis, or future trip projections were developed as part of this effort.

Based on Rock and Rail's estimates, the anticipated daily and peak hour trip generation for Opening year (2018) is shown in **Table 1**. The trip generation includes employee trips entering/exiting the facility, ancillary employees that may be at the facility, and truck traffic related to product transportation and delivery. The truck traffic will include Rock and Rail employees, customers and leased ready mix trucks, asphalt trucks, aggregate trucks, and various product delivery trucks.

**Table 1. Daily and Peak Hour Site Trips**

Vehicle Trip Type	Daily Site Trips	AM Peak			PM Peak		
		In	Out	Total	In	Out	Total
Materials and Deliveries Trips	880	9	62	71	48	0	48
Employee Trips	222	80	0	80	0	77	77
<b>Total Trips</b>	<b>1,102</b>	<b>89</b>	<b>62</b>	<b>151</b>	<b>48</b>	<b>77</b>	<b>125</b>

The primary haul route for truck traffic entering/exiting the site will be via 26<sup>th</sup> Avenue to Powhaton Road. Powhaton Road does not provide access to I-70, so traffic will utilize Colfax

Avenue/I-70 Frontage Road either to the west to enter I-70 at Exit 289, or to the east to enter I-70 at Exit 292. The anticipated routes are shown in **Figure 1**, Traffic Route layout map. It is not anticipated that 26<sup>th</sup> Avenue will be utilized west of Powhaton Road unless there is a local delivery.

The proposed facility will have one main roadway access, which will be located off of 26<sup>th</sup> Avenue. A secondary/emergency access will be located off of Monaghan Road. Internally, the site will have a one-lane access road which will run counterclockwise throughout the property, and has one proposed main exit, also on 26<sup>th</sup> Avenue, as shown in the conceptual layout in **Figure 2**.

Please feel free to contact me at 720-225-4630 if you have any questions regarding the proposed trip generation for this site.

Sincerely,

**DAVID EVANS AND ASSOCIATES, INC.**

Heather Gade, P.E.  
Traffic Engineer

Victor Rachael  
Public Works Traffic Division  
15151 E. Alameda Parkway, Suite 5200  
Aurora, CO 80012

**Re: Traffic Impact Discussion – Monaghan Materials Facility - FDP**  
**Application Number:** DA-2110-00  
**Case Number:** 2017-7004-00

Dear Mr. Rachael:

Once the I-70 and Monaghan interchange is completed the dedicated haul route would become: exit at Monaghan Road from I-70, then north on Monaghan Rd to 26<sup>th</sup> Avenue, then West on 26<sup>th</sup> Avenue to the main access to the site and then South into the site.

If you have any questions, or need further clarification concerning the resubmitted plans, please don't hesitate to give me a call at 303-353-3744.

Respectfully submitted,  
**MERRICK & COMPANY**

# I-70 System Level Study

## Existing Conditions Report

Prepared for:

CDOT Region 1

Prepared by:

Project Manager: Shane Binder

Apex Design Reference No. 170269.20

May 8, 2020

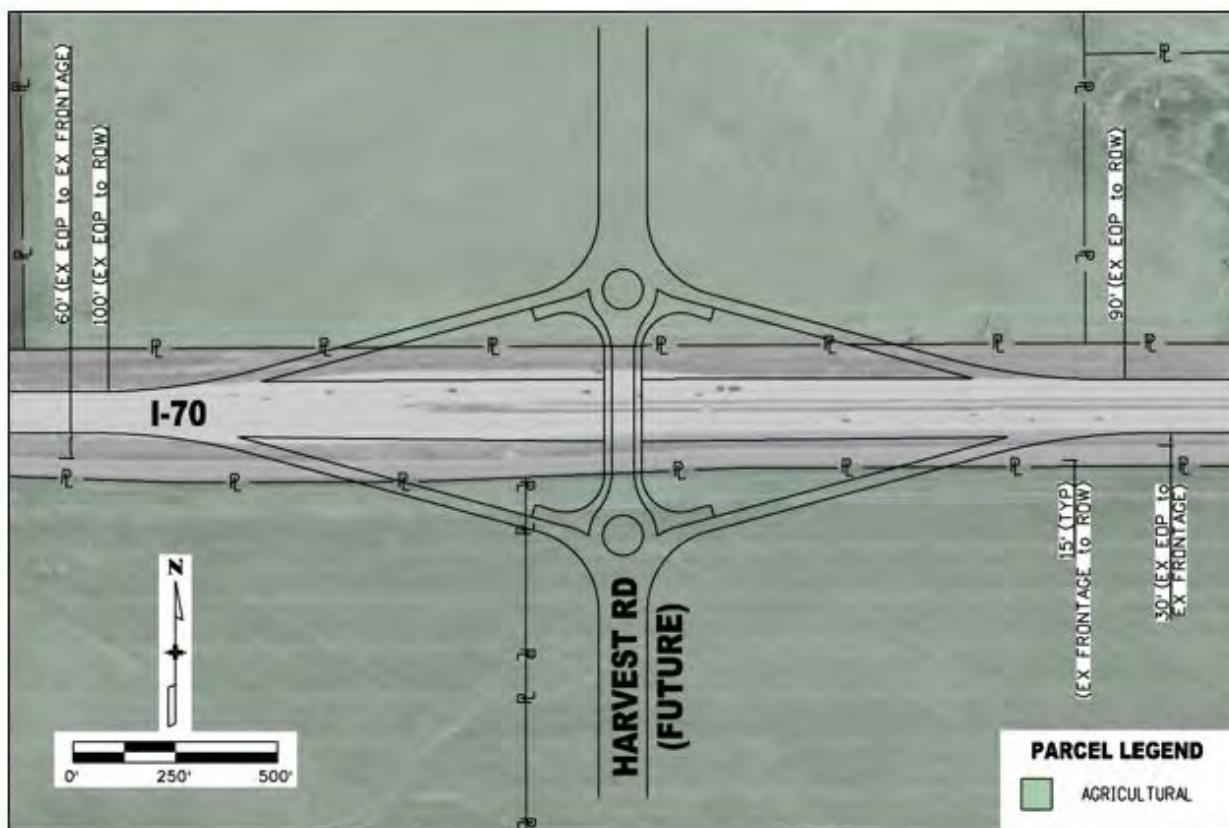

## MP 290: Harvest Road

No interchange exists at this location at present; however, a future interchange has been designed and construction funds have been committed. The future Harvest Road interchange is included in the DRCOG Year 2040 baseline model.

Harvest Road does not exist in the vicinity of I-70 at present. However, it is a north-south arterial from 6<sup>th</sup> Avenue, one mile to the south, serving new residential development in eastern Aurora. When Harvest Road is extended to a new interchange at I-70 in the future, it is anticipated to have a four-lane cross-section at the future interchange with a speed limit to be determined in the future. The future interchange is anticipated to have two-lane roundabouts with right turn bypass lanes at each ramp terminal.

The land use surrounding this location is rural agricultural as shown in **Figure 7**. A two-lane frontage road exists at present on the south side of I-70; this frontage road is envisioned to be rerouted significantly to the south in the future.

**Figure 7. MP 290: Future Harvest Road ROW and Land Uses**

# Fact Sheet

## HISTORY & BACKGROUND

### The Aerotropolis Regional Transportation Authority

On February 27, 2018, the Aurora City Council, the Adams County Board of County Commissioners, and the Aerotropolis Area Coordinating Metropolitan District (AACMD) executed an intergovernmental agreement establishing the Aerotropolis Regional Transportation Authority (ARTA). The ARTA Board of Directors consists of representatives from all three of these agencies. They will manage and oversee the budgeting, phasing, and financing of critical regional transportation infrastructure projects needed to improve access across Aurora and Adams County. These improvements will provide much-needed additional connectivity to Denver International Airport with new interchanges on Interstate 70 (I-70) and E-470. For more information about ARTA, its vision, and recent achievements, **please visit the ARTA website at [www.aerotropolisrta.org](http://www.aerotropolisrta.org).**

### I-70/Harvest Road Interchange

A key element of the transportation network is a new interchange on I-70 along the proposed Harvest Road alignment. This project will be a critical piece of the roadway network which will convey people and commerce to Denver International Airport and to the adjacent Colorado Aerotropolis; a developing world-class residential, commercial, and industrial community expected to create 170,000 new jobs.

### History of the Interchange

Harvest Road has long been identified in numerous transportation and land-use plans as a key north-south transportation corridor, and has more recently been included in the Denver Regional Council of Governments (DRCOG) 2040 Metro Vision Regional Transportation Plan as well as the update of the Northeast Area Transportation Study.

In 2006, the I-70/Harvest Road Interchange was included as part of the "Preferred Alternative" identified in the Environmental Assessment (EA), the Finding of No Significant Impact (FONSI), and the Interstate Access Request (IAR) documentation prepared for the I-70/E-470 Interchange Complex. The environmental studies and the subsequent summary documents (EA and FONSI), along with the IAR, were conducted and prepared in accordance with requirements set forth from the National Environmental Policy Act (NEPA), Federal Highway Administration (FHWA), and Colorado Department of Transportation (CDOT).

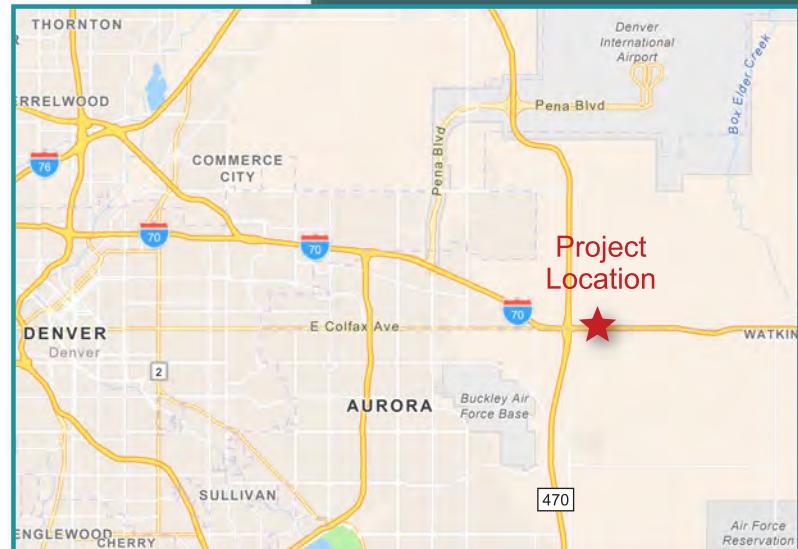

The original approvals of these documents were granted on the following dates:

- Interstate Access Request – February 9, 2006
- Environmental Assessment – November 7, 2006
- Finding of No Significant Impact – July 10, 2007

The design and construction of the interchange was not completed at the time due to a lack of funding.

## PROJECT BENEFITS

- Create regional connectivity
- Establish Harvest Road as a key North-South arterial
- Increase mobility to handle projected trips associated with growth
- Reduce congestion & vehicle travel time
- Connect local residents to job opportunities in the area

## PROJECT MILESTONES AND SCHEDULE

- Feb 2006 - IAR approved
- Nov 2006 - EA approved
- July 2007 - FONSI signed
- July 2007 to Feb 2018 – Project on hold (unfunded)
- Feb 2018 - ARTA formed
- Feb 2019 - EA & Traffic Reevaluation began
- Estimated Dec 2019 - EA Reevaluation and IAR update approval
- Estimated Jan 2020 - Interchange Design begins

## STATUS UPDATE

### Project Restart

With the formation of ARTA and its mission providing a funding mechanism for the interchange, preliminary meetings with CDOT and FHWA were held in 2018 with regard to advancing the design and construction of this interchange. Through these discussions it was determined, due to the length of time elapsed since the initial approvals, that a “Reevaluation” of the original EA, as well as an update of the traffic forecasts, travel demands, and the impacts to the regional transportation network, would be required.

### Purpose

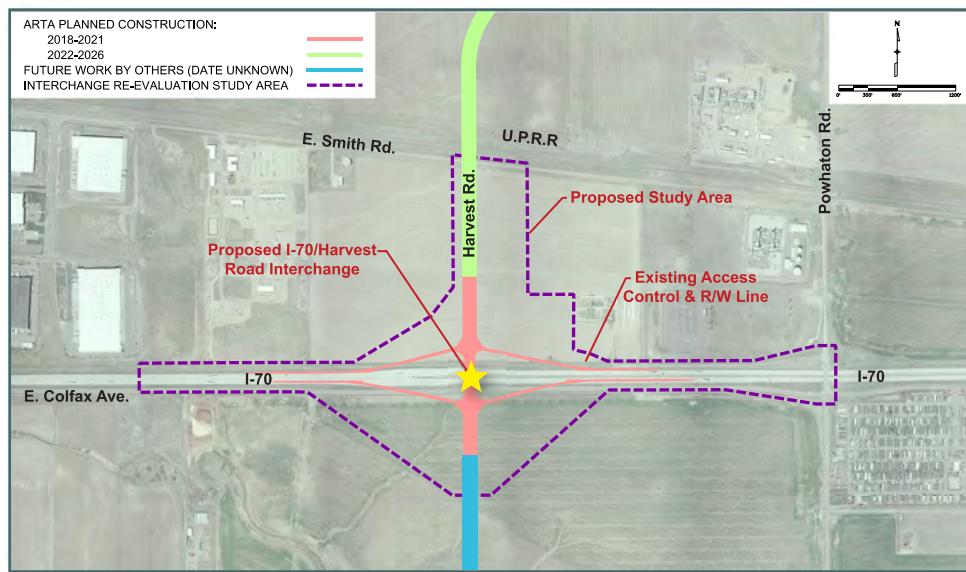

The purpose for the interchange remains the same today as what is documented in the original EA and FONSI—to link the freeway and tollway systems in an efficient and safe manner while maintaining and enhancing local access for the existing and planned roadway system along with future travel demand.

### Current Project Status

The Reevaluation process began in early 2019, as a project team consisting of transportation engineers and environmental specialists began collecting traffic and environmental-related data, along with coordinating with personnel from FHWA and CDOT. The Reevaluation, including the updated traffic and environmental documents and development of conceptual and preliminary layouts for the interchange, is scheduled to be completed by December 2019. The Reevaluation of the previously approved EA is following FHWA and CDOT policies and procedures, which outline the requirements for the justification and documentation necessary to substantiate any proposed changes in access to the interstate system.

### Moving Forward

Upon approval of the Reevaluation and the updated IAR, preliminary and final design of the I-70/Harvest Road Interchange will proceed along with portions of Harvest Road north from I-70 to DIA. Harvest Road will eventually extend to the south of I-70, providing additional connectivity to future growth areas within the City of Aurora and Arapahoe County.

I-70/Harvest Road Interchange EA Reevaluation Study Area

I-70 | Harvest Road

### CURRENT STATUS

The following tasks are currently under way:

- Project Management Team meetings
- Environmental resource investigations
- Traffic update & analysis
- Interchange refinement study

**LEVEL OF SERVICE DEFINITIONS**  
**From *Highway Capacity Manual*, Transportation Research Board**

**SIGNALIZED INTERSECTION LEVEL OF SERVICE (LOS)**

<u>LOS</u>	<u>Average Vehicle Delay</u> sec/vehicle	<u>Operational Characteristics</u>
<b>A</b>	<10 seconds	Describes operations with low control delay, up to 10 sec/veh. This LOS occurs when progression is extremely favorable and most vehicles arrive during the green phase. Many vehicles do not stop at all. Short cycle lengths may tend to contribute to low delay values.
<b>B</b>	10 to 20 seconds	Describes operations with control delay greater than 10 seconds and up to 20 sec/veh. This level generally occurs with good progression, short cycle lengths, or both. More vehicles stop than with LOS A, causing higher levels of delay.
<b>C</b>	20 to 35 seconds	Describes operations with control delay greater than 20 and up to 35 sec/veh. These higher delays may result from only fair progression, longer cycle length, or both. Individual cycle failures may begin to appear at this level. Cycle failure occurs when a given green phase does not serve queued vehicles, and overflows occur. The number of vehicles stopping is significant at this level, though many still pass through the intersection without stopping.
<b>D</b>	35 to 55 seconds	Describes operations with control delay greater than 35 and up to 55 sec/veh. At LOS D, the influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, and high v/c ratios. Many vehicles stop, and the proportion of vehicles not stopping declines. Individual cycle failures are noticeable.
<b>E</b>	55 to 80 seconds	Describes operations with control delay greater than 55 and up to 80 sec/veh. These high delay values generally indicate poor progression, long cycle lengths, and high v/c ratios. Individual cycle failures are frequent.
<b>F</b>	>80 seconds	Describes operations with control delay in excess of 80 sec/veh. This level, considered unacceptable to most drivers, often occurs with over-saturation, that is, when arrival flow rates exceed the capacity of lane groups. It may also occur at high v/c ratios with many individual cycle failures. Poor progression and long cycle lengths may also contribute significantly to high delay levels.

## LEVEL OF SERVICE DEFINITIONS

**From *Highway Capacity Manual*, Transportation Research Board**

### **UNSIGNALIZED INTERSECTION LEVEL OF SERVICE (LOS)**

Applicable to Two-Way Stop Control, All-Way Stop Control, and Roundabouts

<b>LOS</b>	<b>Average Vehicle Control Delay</b>	<b>Operational Characteristics</b>
<b>A</b>	<10 seconds	Normally, vehicles on the stop-controlled approach only have to wait up to 10 seconds before being able to clear the intersection. Left-turning vehicles on the uncontrolled street do not have to wait to make their turn.
<b>B</b>	10 to 15 seconds	Vehicles on the stop-controlled approach will experience delays before being able to clear the intersection. <u>The delay could be up to 15 seconds.</u> Left-turning vehicles on the uncontrolled street may have to wait to make their turn.
<b>C</b>	15 to 25 seconds	Vehicles on the stop-controlled approach can expect delays in the range of 15 to 25 seconds before clearing the intersection. Motorists may begin to take chances due to the long delays, thereby posing a safety risk to through traffic. <u>Left-turning vehicles on the uncontrolled street will now be required to wait to make their turn causing a queue to be created in the turn lane.</u>
<b>D</b>	25 to 35 seconds	This is the point at which a traffic signal may be warranted for this intersection. The delays for the stop-controlled intersection are not considered to be excessive. The length of the queue may begin to block other public and private access points.
<b>E</b>	35 to 50 seconds	The delays for all critical traffic movements are considered to be unacceptable. The length of the queues for the stop-controlled approaches as well as the left-turn movements are extremely long. <u>There is a high probability that this intersection will meet traffic signal warrants.</u> The ability to install a traffic signal is affected by the location of other existing traffic signals. Consideration may be given to restricting the accesses by eliminating the left-turn movements from and to the stop-controlled approach.
<b>F</b>	>50 seconds	The delay for the critical traffic movements are probably in excess of 100 seconds. The length of the queues are extremely long. Motorists are selecting alternative routes due to the long delays. <u>The only remedy for these long delays is installing a traffic signal or restricting the accesses.</u> The potential for accidents at this intersection are extremely high due to motorist taking more risky chances. If the median permits, motorists begin making two-stage left-turns.

## Intersection Summary

Cycle Length: 90

Actuated Cycle Length: 72.2

Natural Cycle: 60

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.62

Intersection Signal Delay: 16.4

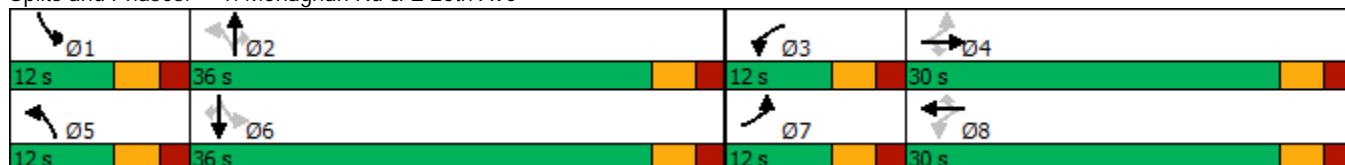

Intersection LOS: B

Intersection Capacity Utilization 45.8%

ICU Level of Service A

Analysis Period (min) 15

## Splits and Phases: 1: Monaghan Rd &amp; E 26th Ave

## Trip Generation Rate Estimate

### Land Use: General Outdoor Storage Yard

**(by LSC 11-15-2023)**

LSC estimates of trip-generation rates for a “General Outdoor Storage Yard” land use for this project have been based on data collected at similar sites in Colorado Springs and Arapahoe County, CO.

A “General Outdoor Storage Yard” land use is a commercial business which provides leasable outdoor spaces for businesses, including construction and industrial businesses, contractors, and others needing space to store vehicles, equipment, large machinery, materials, etc. The tenants are commonly, but not limited to, maintenance contractors, design-build contractors, and other contractors needing properly zoned storage space. The intent is to provide separate leasable spaces for several tenants, rather than for a single tenant.

Generally, this use does not include permanent buildings such as offices, warehouses or maintenance shops, although one of the sites counted did have a building on the site. As permanent buildings are not typically included, the independent/predictor variable used is “Acres.”

The businesses may offer 24-hour access with a gate and access keypad.

This use is similar to mini warehouse/self-storage but is primarily outdoor storage space for businesses and contractors, generally without permanent buildings. The use is also similar to outdoor RV/Boat storage and some of the sites surveyed allow for lease of space for RVs and boats and appear to provide vehicle parking spaces. However, this use allows for storage of materials and equipment other than or in addition to vehicles/trailers and has fenced off yard areas for storage in addition to vehicle/trailer parking spaces and is primarily intended for lease by contractors.

**The data and average trip-generation rates are summarized in the following table:**

ITE Code	Land Use	Survey Location	Value	Units <sup>1</sup>	Driveway Trips Counted <sup>1</sup>				Calculated Trip Generation Rates						
					A.M. Peak Hour		P.M. Peak Hour		A.M. Peak Hour		P.M. Peak Hour				
					Weekday	In	Out	In	Out	Weekday	In	Out			
N/A	General Outdoor Storage	Site No. 1 - Colorado Springs, CO	8.7	Acres	350	27	21	11	11	40.28	3.11	2.42	1.27	1.27	
N/A	General Outdoor Storage	Site No. 2 - Arapahoe County, CO	9.8	Acres	517	13	10	45	28	52.76	1.33	1.02	4.59	2.86	
N/A	General Outdoor Storage	Site No. 3 - Arapahoe County, CO	5.5	Acres	110	9	3	4	6	20.00	1.64	0.55	0.73	1.09	
										Average	37.68	2.02	1.33	2.19	1.74

<sup>1</sup>Source: local entering and exiting count data at contractor storage yards in Colorado Springs, CO and Arapahoe County, CO in October and November 2023

LSC estimates of trip-generation rates shown in the table above have been used to estimate the trip generation for the General Outdoor Storage land use for this project.

August 30, 2024

## LSC TRANSPORTATION CONSULTANTS, INC.

2024-09-30 (DJK) reviewed, comments include:  
- Hudson Rd and other interchanges associated with access to site clarity needed (per 6/14/24 discussion)  
- provide clearer site distribution values and access locations from I-70 (Fig 6a)  
- Recommendation tables, several intersections with only 'Others' recommended but high site volumes

Mr. Chris Fellows  
Blue Eagle Metropolitan District No. 1  
9155 E. Nichols Avenue, Suite 360  
Centennial, CO 80012

Re: Blue Eagle Technology Park  
Traffic Impact Analysis  
Aurora, CO  
LSC #230650

Dear Mr. Fellows:

In response to your request, LSC Transportation Consultants, Inc. has prepared this updated traffic impact analysis for the proposed Blue Eagle Technology Park to address City comments. As shown on Figure 1, the site is located south of E. 26<sup>th</sup> Avenue and east of Monaghan Road in Aurora, Colorado.

### REPORT CONTENTS

The report contains the following: the existing roadway and traffic conditions in the vicinity of the site including the lane geometries, traffic controls, posted speed limits, etc.; the existing weekday peak-hour traffic volumes; the existing daily traffic volumes in the area; the typical weekday site-generated traffic volume projections for the site; the assignment of the projected traffic volumes to the area roadways; the projected short-term and long-term background and resulting total traffic volumes on the area roadways; the site's projected traffic impacts; and any recommended roadway improvements to mitigate the site's traffic impacts or the impacts from growth in background traffic.

### LAND USE AND ACCESS

The site is proposed to include 30.06 acres for commercial uses, 351.91 acres for industrial uses, and 2.0 acres for a fire station. This report assumes Planning Area 1 will be developed with about 288,000 square feet of commercial floor space, Planning Areas 2, 3, and 4 will be developed with 4,259,000 square feet of floor space that will be used for a mix of warehouse logistics and data center uses and a fire station, and Planning Area 6 will be used for outdoor storage. Planning Area 5 is planned as open space. Figure 2a shows the proposed land use map. Access is proposed from multiple locations as shown in the circulation plan in Figure 2b. The existing at-grade rail road crossing just west of the Hayesmount Road alignment provides access to an existing home that will be removed - the existing access is not planned to be used as either a public or emergency access for the site.

## ROADWAY AND TRAFFIC CONDITIONS

### Area Roadways

The major roadways in the site's vicinity are shown on Figure 1 and are described below.

- **E. 26<sup>th</sup> Avenue** is an east-west, two-lane paved road north of the proposed site. The posted speed limit is 45 mph. The City of Aurora NEATS report shows E. 26<sup>th</sup> Avenue as a future four-lane Minor Arterial by 2040.
- **Monaghan Road** is a north-south, two-lane paved road west of the proposed site. The posted speed limit is 45 mph in the vicinity of the site. The City of Aurora NEATS report shows Monaghan Road as four-lane Major Arterial from E. Jewell Avenue to E. 26<sup>th</sup> Avenue and as a future four-lane Minor Arterial from E. 26<sup>th</sup> Avenue to E. 64<sup>th</sup> Avenue. The City of Aurora NEATS report shows a new grade-separated interchange at I-70 and Monaghan Road by 2040. This report assumes the north half of the grade-separated interchange at I-70 and Monaghan Road will **not** be constructed by the buildout year (2030) but will be in place by 2050.
- **Hayesmount Road** is a planned four-lane, minor arterial in the vicinity of the site between Monaghan Road and Hudson Road. The City of Aurora NEATS report shows Hayesmount Road extended north from E. Jewell Avenue across I-70 and over the U.P.R.R. railroad tracks as an overpass/flyover and extending north to E. 26<sup>th</sup> Avenue. [1] Per discussion with City staff, the applicant has agreed to reserve an easement or the geometry for a future overpass/flyover, however, this report assumes the overpass will **not** be constructed by 2050. Per those same discussions with City staff the applicant will not be financially responsible for the overpass/flyover, beyond reservation of the geometry for same. See the Recommendation and Conclusion section below for additional support for not including the overpass/flyover in the long term (2050) scenario.
- **Hudson Road** is a north-south, two-lane paved road east of the proposed site. The posted speed limit is 45 mph. The City of Aurora NEATS report shows future Hudson Road as a two-lane Minor Arterial.

### Existing Traffic Conditions

Per 6/14/24 discussion, Watkins Rd to the east of Hudson was to also be considered since it has an interchange with I-70 [2]

Figure 3a shows the existing traffic volumes in the site's vicinity on a typical weekday. The weekday peak-hour traffic volumes and daily traffic counts are from the attached traffic counts conducted by Counter Measures in June and August, 2023. Figure 3b shows the existing lane geometries, traffic controls, and posted speed limits in the vicinity of the site.

### Background Traffic

Figure 4a shows the estimated 2030 background traffic volumes. The 2030 background traffic volumes are based on the existing traffic volumes shown in Figure 3a with a three percent growth rate per year applied. The 2030 background traffic volumes assume Monaghan Road and Hayesmount Road have not been constructed between I-70 and E. 26<sup>th</sup> Avenue and

Additionally, from 6/14/24 conversation, thought that Picadilly was also to be considered due to its connection to I-70 as well [3]

Per discussion with

City staff, the applicant has agreed to reserve an easement or the geometry for a future overpass/flyover, however, this report assumes the overpass will not be constructed by 2050. Per those same discussions with City staff the applicant will not be financially responsible for the overpass/flyover, beyond reservation of the geometry for same.

Number: 2 Author: djkaiser Subject: Callout Date: 9/27/2024 1:57:29 PM -06'00'

Per 6/14/24 discussion, Watkins Rdto the east of Hudson was to also be considered since it has an interchange with I-70

Author: kdfer Subject: Sticky Note Date: 10/18/2024 8:03:15 AM -06'00'

LSC Response: The additional information has been added as requested

Number: 3 Author: djkaiser Subject: Callout Date: 9/27/2024 2:11:13 PM -06'00'

Additionally, from 6/14/24 conversation, thought that Picadilly was also to be considered due to its connection to I-70 as well

Author: kdfer Subject: Sticky Note Date: 10/24/2024 9:10:22 AM -06'00'

LSC Response: The meeting minutes note "LSC will assume the Picadilly Road and Aerotropolis interchanges with I-70 are in place for the buildup year." However, we agreed to show the trip generation impact only to the future Aerotropolis, Monaghan Road, and Watkins Road interchanges with I-70. The updated TIS includes directional distribution and trip generation estimates at these three interchanges but not Picadilly.

Clarify these percentages and what and where I-70 site traffic is coming from (Colfax interchange and others?) Ensure to carry through for each PA identified in following Figs

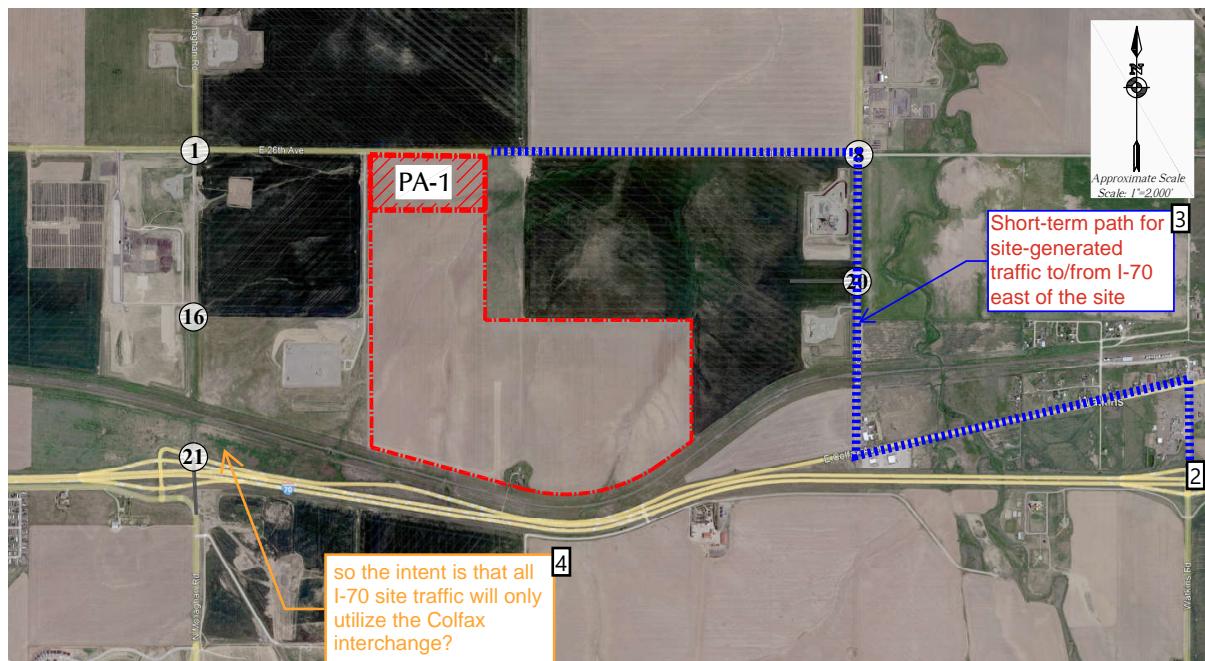

Author: kdfer Subject: Sticky Note Date: 10/24/2024 9:21:25 AM -06'00'

LSC Response: The updated TIS includes directional distribution percentages at the Aerotropolis, Monaghan and Watkins interchanges.

Where is this 10% from? Do not see the two 10%s from I-70 east

#### LEGEND:

$$\frac{5\%}{5\%} = \frac{2030 \text{ Percent Directional Distribution}}{2050 \text{ Percent Directional Distribution}}$$

Where is this 10% from? Do not see the two 10% from I-70 east

Author: kdfer Subject: Sticky Note Date: 10/24/2024 9:19:08 AM -06'00'

LSC Response: A blue line showing the short-term path to/from I-70 east of the site has been added to the figure in this redline document.

Number: 2 Author: kdfer Subject: Polygonal Line Date: 10/18/2024 9:06:30 AM -06'00'

Number: 3 Author: kdfer Subject: Callout Date: 10/18/2024 9:10:39 AM -06'00'

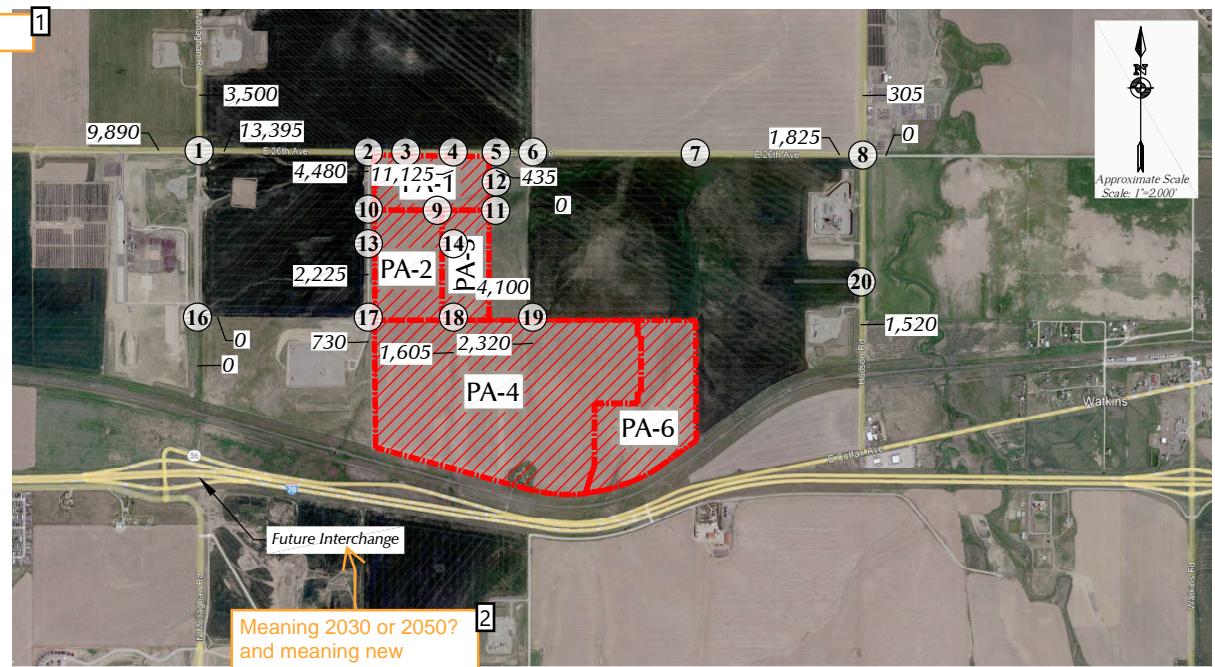

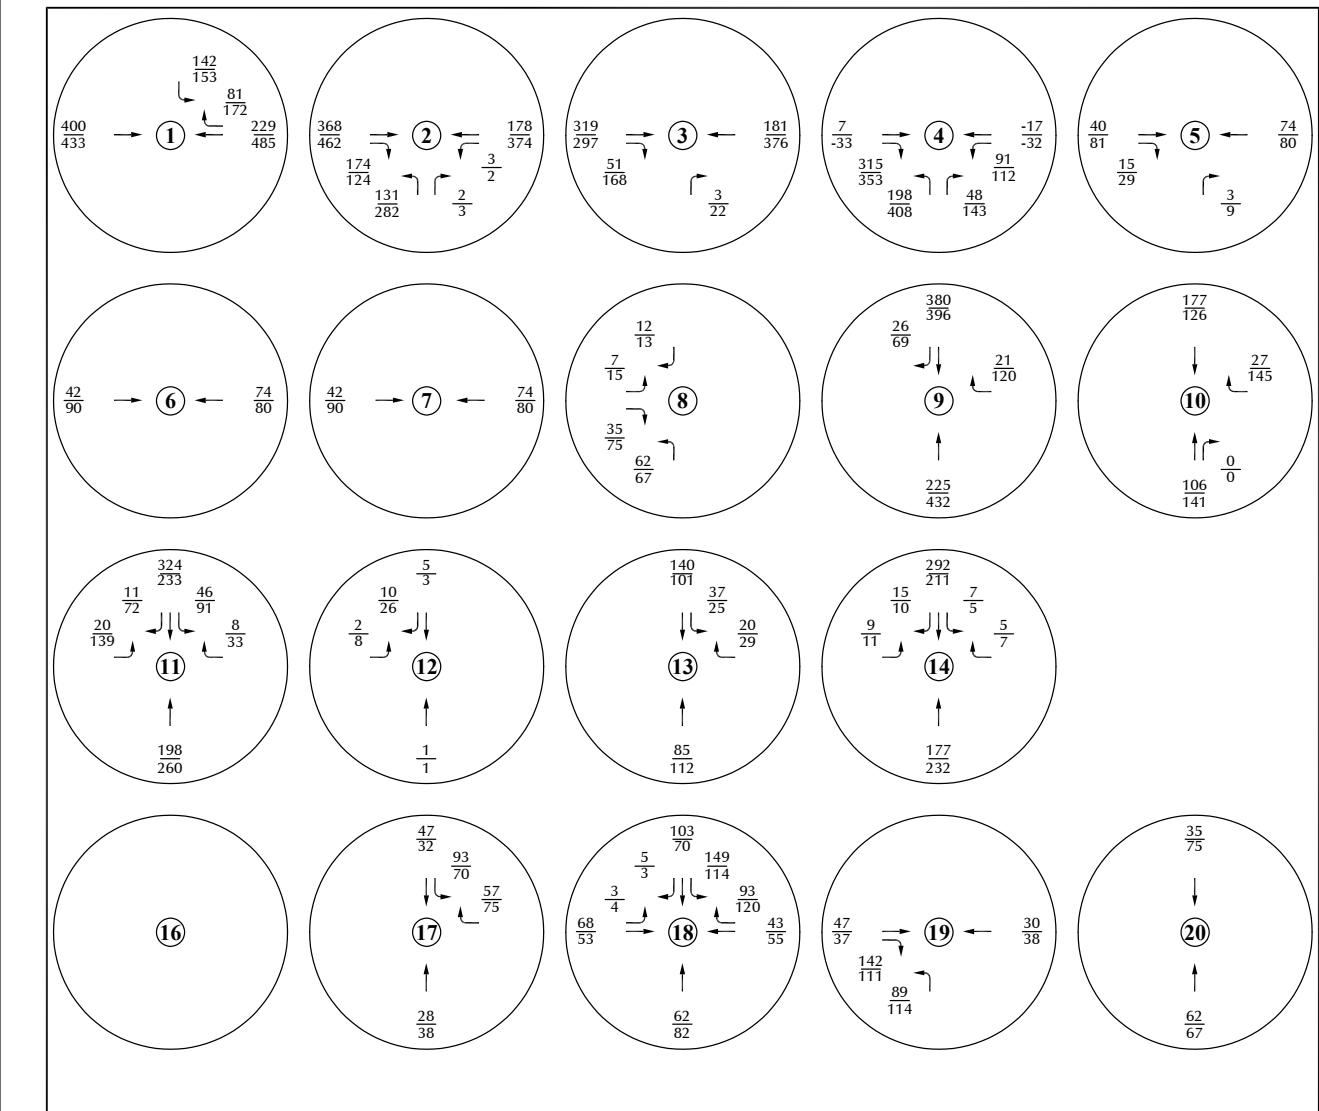

Short-term path for site-generated traffic to/from I-70 east of the site

Number: 4 Author: djkaiser Subject: Callout Date: 9/30/2024 8:36:44 AM -06'00'

so the intent is that all I-70 site traffic will only utilize the Colfax interchange?

Author: kdfer Subject: Sticky Note Date: 10/24/2024 9:18:59 AM -06'00'

LSC Response: Additional site-generated traffic volumes have been added at the future Aerotropolis and Watkins interchanges to clarify the assignment of site-generated traffic to/from I-70.

Meaning 2030 or 2050? and meaning new Monaghan direct connection (Int #21)?

Author: kdfer Subject: Sticky Note Date: 10/24/2024 9:18:46 AM -06'00'

LSC Response: This note will be revised to make it clear that the TIS assumes the Monaghan Interchange will not be in place by 2030.

## Year 2050 Assignment of Site-Generated Traffic

Number: 1 Author: djkaiser Subject: Callout Date: 9/30/2024 8:50:40 AM -06'00'

## New direct connection?

5 Author: kdfer Subject: Sticky Note Date: 10/24/2024 9:18:37 AM -06'00'

LSC Response: Intersection #21 was intended to show the site-generated traffic volumes at the future Monaghan/I-70 interchange. An additional figure that more clearly shows the site-generated traffic volumes at this interchange as well as the Aerotropolis and Watkins interchanges has been included in the updated TIS.
