To whom it may concern,

Please find below a summary of the project planned for 14500 E. Colfax, involving the installation of an Electric Vehicle Supply Infrastructure (EVSI) to enable charging capabilities for our customer.

The project includes the installation of distribution lines, a new transformer, and an EVSI panel, complete with essential components such as breakers, meters, and disconnects. Additionally, underground circuits will be laid to connect each charger, with a commitment to restoring the site upon project completion.

This initiative aims to establish a new electrical service optimized for electric vehicle charging, leveraging Xcel Energy's EV-specific rate structure. Notable features include the incorporation of one new utility transformer, a 400A electrical service, and a mix of two level 2 chargers and one level three charger, designated solely for dealership use.

Should any inquiries arise, please do not hesitate to reach out to Jason Cito at Sturgeon Electric or Jake Yutzy at Xcel Energy.

Thank you,

Jason Cito
