RE: Transportation Impact Study - Revised
The Aurora Highlands – Planning Area 70 (Century)

Dear Mr. Pearson:

Aldridge Transportation Consultants (ATC) is pleased to present this traffic impact study for the proposed residential development of Planning Area 70 of The Aurora Highlands.

ATC is professional service firm specializing in traffic engineering and transportation planning. ATC's principal, John M.W. Aldridge is a Colorado licensed professional engineer. In the past 20 years, ATC has prepared over 1,200 traffic impact studies, designed over 100 traffic signals, and has provided expert witness testimony on engineering design and access issues on multi-million-dollar interchange and highway projects in Kansas and Colorado.

We acknowledge that City of Aurora's review of this study is only for typical performance with submittal requirements, current design criteria, and standard engineering principles and practice.

ATC appreciates the opportunity to be of service. Please call if you have any questions. We can be reached at 303-703-9112.

Respectfully submitted,

Aldridge Transportation Consultants, LLC

John M.W. Aldridge, P.E.
Principal

INTRODUCTION

This Traffic Impact Study examines the impact on traffic caused by the development of Planning Area 70 in The Aurora Highlands. This area is defined by Highlands Creek Pkwy. on the west, 32nd Ave. on the south and the Highlands Creek Park on the northeast side. Figure 1 shows the full development of The Aurora Highlands with village and street names. Please note that the graphic is for illustrative purposes only and subject to change as planning and design is further developed.

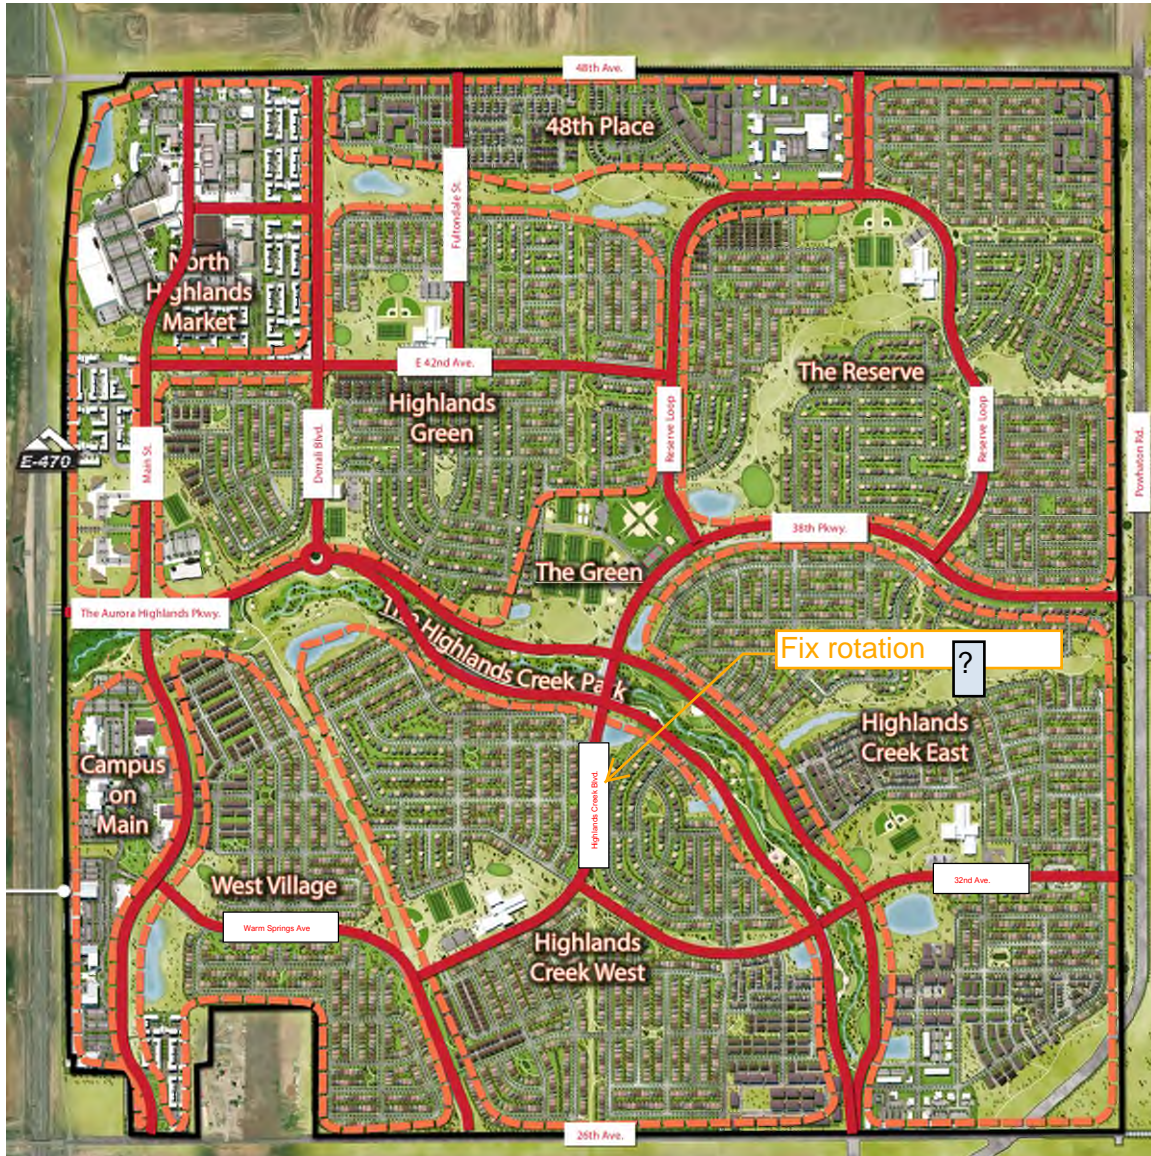

Figure 1 Village and Street Naming Plan

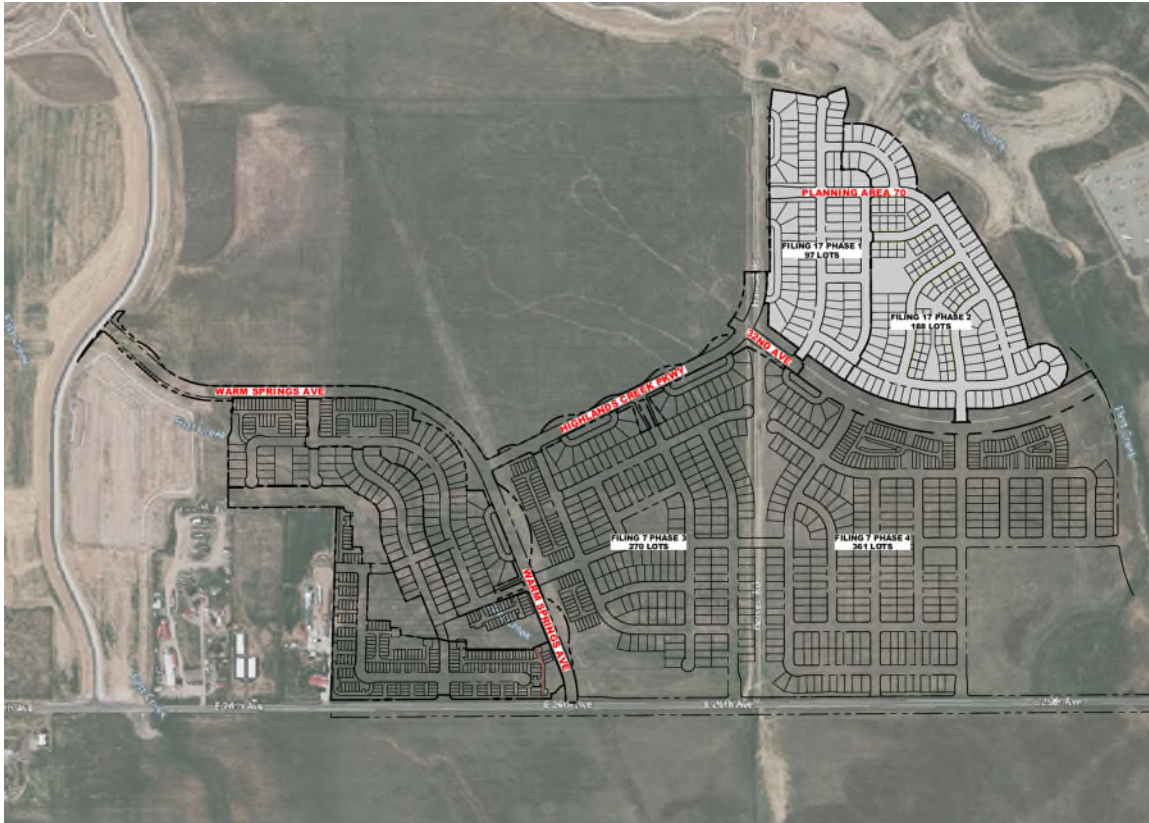

Figure 2 Subject Area and Streets

The section that is the subject of this development application is shown in Figure 2. The proposed development plan features 280 units on approximately 68.3 acres. The density is about 4.4 du/ac. Of the 280 units, 184 are single-family detached and 96 are single-family attached. Note that Figure 2 shows the Phases 1-3 development which was studied by this firm in May 2020.

The **Aurora Highlands Traffic Impact Study** prepared by FHU in July 2018 supplies an overall examination of the approximate 3,100-acre development plan shown in Figure 1. The FHU study focused on the long-term (2040) transportation needs not only for the full-build out but also for the areas that surround Aurora Highlands. The long-term analysis was based on the DRCOG planning using the Compass model and 2040 NEATS travel demand modeling. The **Northeast Area Transportation Study** (NEATS) transportation plan refresh was completed in October 2018 and is inclusive of the Aurora Highlands master development plan again as depicted in Figure 1. While adjustments to the land use and street layout are inevitable, these documents nonetheless supply a sound foundation and basis for this study and its improvement recommendations. Another important document is the Technical Memo prepared by HRGreen in September 2018 that determined the peak hour volumes and provided a peak hour capacity analysis for several planned intersections in The Aurora Highlands development. The memo assumed full development of The Aurora Highlands and based the AM and PM peak hour volumes on standard percentages of the daily volumes determined by FHU. The intersections of relevance to Planning Area 70 are:

1. Main St. at 26th Ave.
2. 38th Ave./The Aurora Highlands Parkway/at Denali Blvd. (Roundabout)
3. 38th Ave./The Aurora Highlands Parkway/at Main St.
4. The Aurora Highlands Parkway – Eastbound Direction at Highlands Creek Blvd.
5. The Aurora Highlands Parkway – Westbound Direction at Highlands Creek Blvd.

Except for the roundabout, all relevant intersections are signalized and per the HRGreen analysis will operate at the benchmark LOS D or better at full-build out of the development with their recommended geometric configuration.

Per the FHU study, more refined traffic impact study could be prepared for each individual development application, such as this, to refine the specifics needed as development occurs. The FHU study sets the stage with respect to the roadway needs, layout, and classifications.

EXISTING CONDITIONS

Since the study for the Phase 1-3 development there have been significant changes to the infrastructure. Main St. is now functional as a four-lane street and sections of The Aurora Highlands Parkway are in place including the roundabout at Denali Blvd. The intersections with The Aurora Highlands Parkway and Highlands Creek Pkwy. should be finished by the time Planning Area 70 begins construction. Although there is no construction yet on the infrastructure for Phases 1-3, we assume it will begin in the short-term including the extension of The Aurora Highlands Parkway to 26th Ave. and in the long terms its proposed connection to the Harvest Road interchange with I-70.

26th Ave. is a 2-Lane Minor Arterial that extends from Picadilly Road to Watkins Road. It is undivided and in the subject area includes a 6-foot gravel shoulder. There is no sidewalk on either side. It carries approximately 1,000 ADT per NEATS, and the posted speed limit is 45 mph.

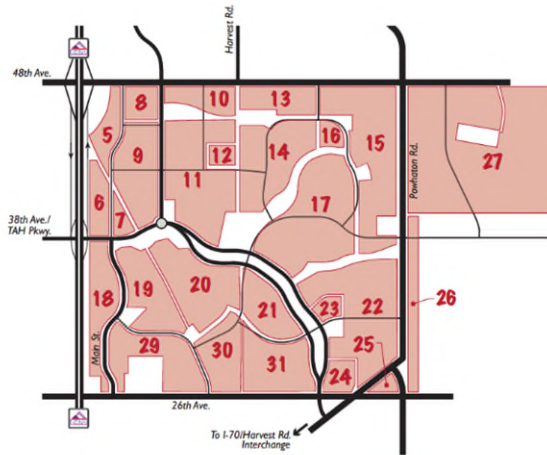

ACCESS LOCATIONS

There will be three primary access locations to Planning Area 70 from the interior collector streets. One on Highlands Creek Blvd. and two on 32nd Ave. All are full movement.

LAND USE and TRIP GENERATION

The site will be developed with 184 single-family detached and 96 single-family attached units. The trip generation rates are from the *ITE Trip Generation Manual, 11th Edition*. The following worksheet supplies the ADT and AM/PM Peak Hour traffic volumes. The planning areas are subtotaled by the incremental traffic analysis zones (TAZ) as provided in the FHU master traffic study. Figure 3 following the worksheet depicts the applicable zones and zone number.

Trip Generation Worksheet											
ITE CODE	PLANNING AREA	LAND USE	UNIT	QUANTITY	ADT	AM			PM		
						IN	OUT	TOTAL	IN	OUT	TOTAL
215	70	Single-Family Attached	DU	96	7.20 691	0.15 14	0.33 32	46	0.33 32	0.25 24	56
210	70	Single-Family Detached	DU	184	9.43 1735	0.19 35	0.52 96	130	0.59 109	0.35 64	173
Total Trips					2426	49	127	177	140	88	229

In this case, the TAZ is 21. In comparing the zone data, the FHU traffic study programmed 369 single-family homes that produces 3,480 daily trips. This application for Planning Area 70 is less at 280 units and produces 2,426 daily trips – a reduction of 1,000 trips daily.

Figure 3 Traffic Analysis Zones

TRAFFIC DISTRIBUTION & ASSIGNMENT

The traffic distribution will be oriented to/from the west on 26th Ave. via Main St. at about 25 percent of the traffic and 30 percent to 38th Ave. via The Aurora Highlands Parkway. The other 35 percent will go east on 26th Ave. or south on The Aurora Parkway to the future Harvest Road/I-70 interchange. This analysis focuses only on the long-term 2040 FHU master plan. The short-term infrastructure is too much in flux to reliably analyze the impact. Figure 4 shows the AM and PM Trip Assignment to each of the subject intersections.

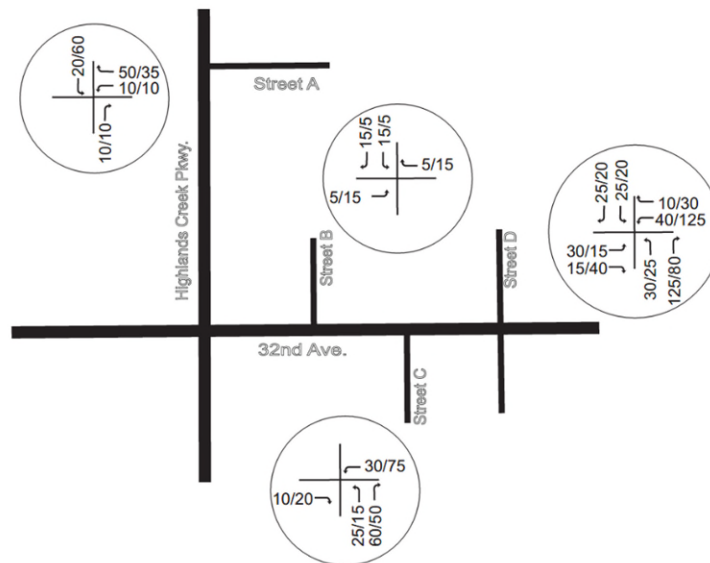

Figure 4 AM/PM Peak Hour Trip Assignment

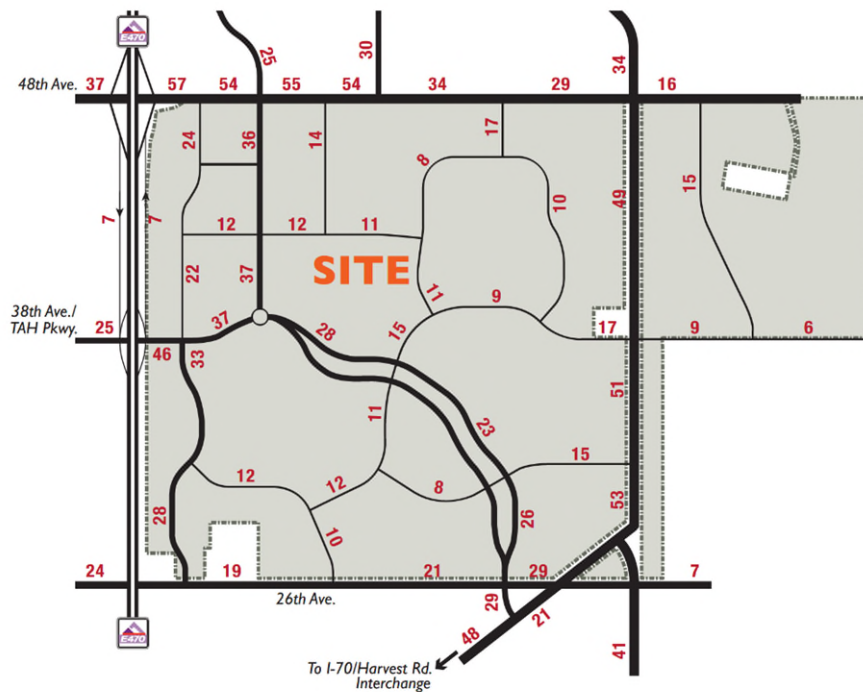

Still have issues with this paragraph. If anything, the FHU study was more aggressive with timeline, as it presumes the full build out of the area to occur prior to 2040, whereas NEATS assumes build condition to be post-2040 (i.e. NEATS Figure 10 showing buildout ADT at ~22k). This paragraph is using this discrepancy to presume that less traffic will be anticipated for 26th than the FHU study projected. Revise this paragraph as such.

LC
f12

FUTURE TRAFFIC VOLUMES

The future (2040) traffic volumes for The Aurora Highlands have been studied by the FHU study and NEATS travel modeling. The forecast volumes include the Aurora Highlands and land uses surrounding the Aurora Highlands are being used by city staff in the preparation of the NEATS travel model according to the FHU study and shows the 2040 Total Traffic. It should be noted that the FHU study projects 19-21,000 ADT on 26th Ave. NEATS projects about 22,000 ADT on 26th Ave. The FHU study explains that their travel modelling assumes build out of Aurora Highlands to its maximum potential although not a likely scenario. They did so to give the developer flexibility in the development of each planning area and to meet the City's requirement in preparing a traffic impact study. To wit, the zones in this phase are being developed with 280 units vs. the 369 units programmed by FHU. Overall, the FHU study forecast 203,000 trips generated by the full build out. NEATS on the other hand forecast 117,000 trips from the same traffic analysis zones.

The paragraph explains the discrepancy. We added a sentence saying that the Synchro models use and are consistent with the FHU study forecasting.

LEGEND

XXXX = Volumes in 1000's

[Shaded Area] = Aurora Highlands

Figure 5 2040 Total Traffic per the FHU Study

In both documents, however, the 2040 street network assumes that both Main St. and 26th Ave. will be 4-Lane Arterials. Moreover, based on the daily volumes traffic signal control will be likely at Main St./26th Ave. as projected by HRGreen memo. The following graphics show the movement volumes, and the 2040 AM and PM peak hours for Planning 70. The through movement volumes are derived from the FHU master study. The ADT on Highlands Creek Pkwy. is 12-11,000 and on 32nd Ave. it is 8,000 ADT.

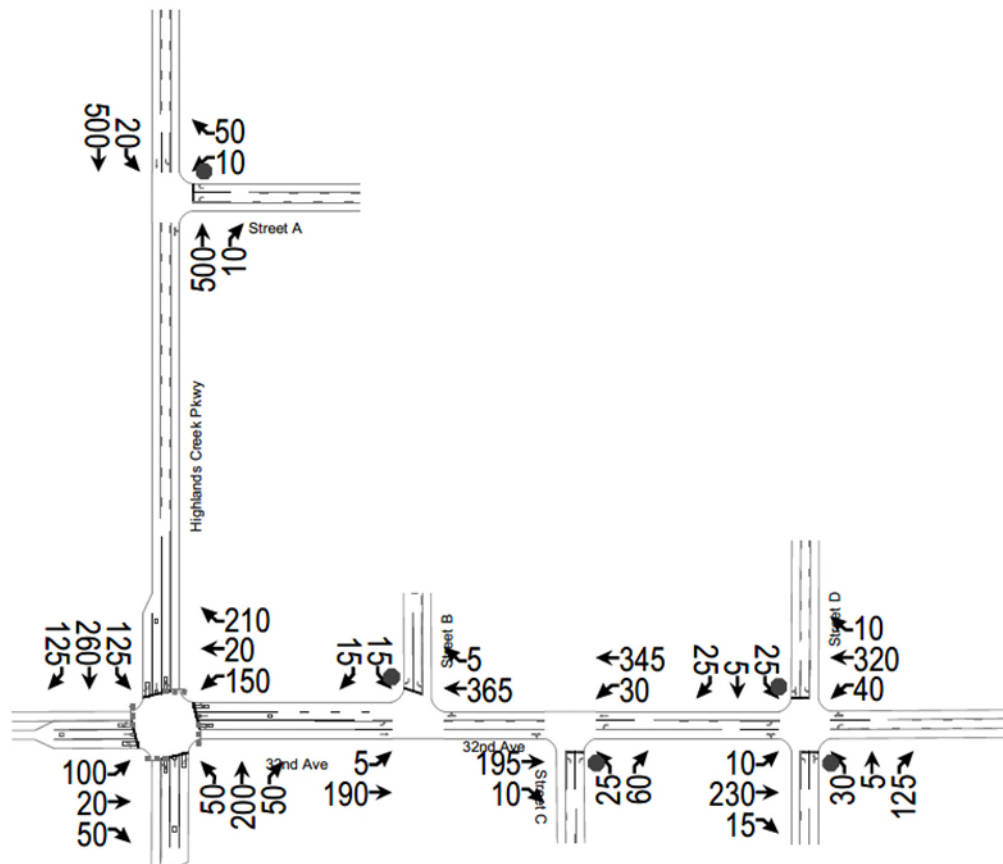

Figure 6 2040 AM Total

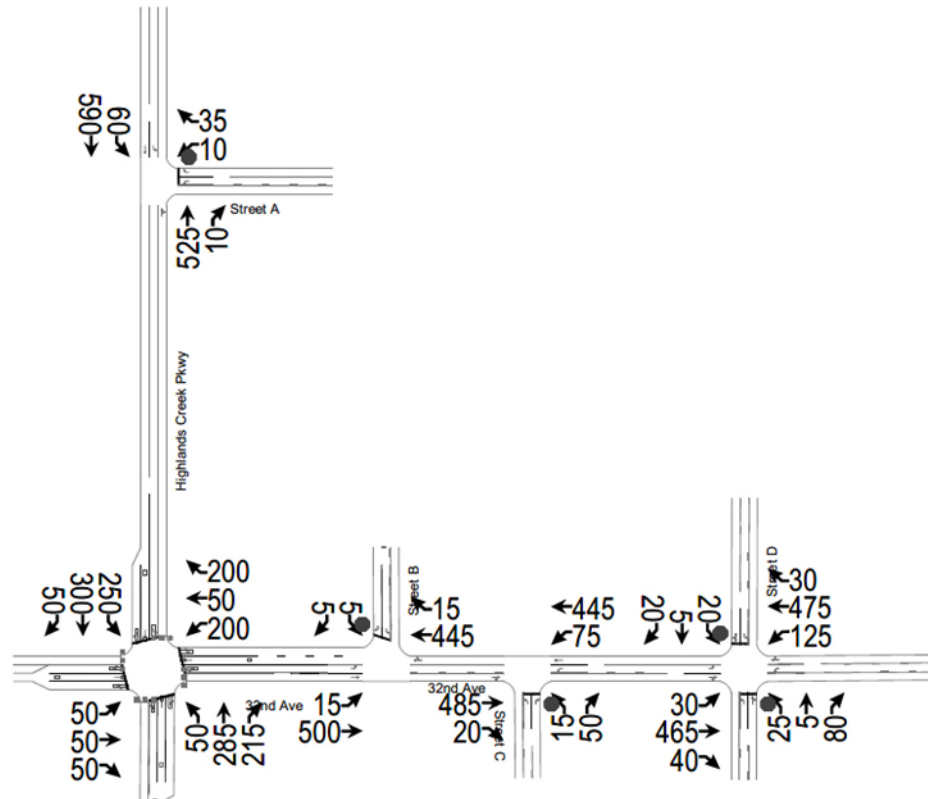

Figure 7 2040 PM Total

PEAK HOUR INTERSECTION LEVEL OF SERVICE

ATC uses Synchro v.10 for operations analyses. The Synchro method is based on the 6th Edition of the Highway Capacity Manual (HCM). The table summarizes the 2040 AM and PM peak hour LOS at the three intersections serving Planning Area 70. As there are no existing intersections in the subject area, no analysis of the exiting conditions or background conditions is possible. Synchro reports for each timeframe are provided in the appendix.

The HCM states that, “LOS is used to translate complex numerical performance rating into a simple A-F system representative of the travelers’ perception of the quality of service provided by a facility or service. Practitioners and decision makers alike must understand that the LOS letter result hides much of the complexity of facility performance¹.” LOS is a letter rating from A to F. LOS A shows free-flow traffic conditions and little to no delay at intersections. LOS F is heavy

¹ HCM version 6, Chapter 5, pages 5-3 – 5-6.

Modify:
Street A = 34th Ave
Street B = Irvington St
Street C = Street B
(temporary name, but
acceptable for now)

Done.

traffic congestion with significant delay. LOS is supplied for the overall operations at signalized intersections. LOS D is generally the benchmark for acceptable signalized intersection operations during the weekday peak hours. The critical movement, not the overall, shows the LOS rating for unsignalized intersections, which is generally a left turn out from the minor street approach. Caution must be used when evaluating the LOS at unsignalized intersections particularly when LOS F is shown. In case of LOS F, the HCM recommends that other evaluation methods should be considered such as the volume over capacity ratios, the 95th percentile queue length, and duration of LOS F to make the most effective traffic control decision². LOS F at unsignalized intersections is typically normal during the weekday peak hours as the duration of the LOS F condition is relatively short.

Unsignalized Intersection LOS & 95 th ile Summary			
LOS (Control Delay (secs) A=0-10, B=>10-15, C=>15-25, D=>25-35, E=>35-50, F=>50) / 95 th ile Q (veh			
Intersection	Movement	2040	
		AM	PM
Highlands Creek / 34th Ave.	Critical Movement WBL	C/15.5	C/17.9
32nd Ave. / Irvington St.	Critical Movement SBL	B/11.9	B/14.7
32nd Ave. / Street B	Critical Movement NBL	B/12.5	C/16.5
32nd Ave. / Street D	Critical Movement SBL	C/21.7	F/68.1/1

The operations analysis demonstrates that the Street A intersection on Highlands Creek Pkwy. operate with two-way stop sign control at an acceptable LOS C/C. Likewise at the intersections of 32nd Ave./Street B and 32nd Ave. / Street C, they will operate acceptably at LOS B/B and LOS B/C, respectively. The intersection of 32nd Ave. and Street D reports LOS C in the AM peak hour and LOS F in the PM peak hour. In this case the 95th percentile queue is just one vehicle per hour and volume over capacity ratio is less than 0.2. In traffic engineering terms this is acceptable operations.

The intersection of Highlands Creek Blvd. and 32nd Ave. reports LOS F/F if left unsignalized. In this case the 95th percentile queue is 9 vehicles and the volume over capacity ratio is 1.01. These do not meet the LOS D benchmark. However, per the COA traffic impact guidelines LOS F can be allowed if there is an alternate route is available. Upon build-out there will be many options, but if the volumes as projected come to fruition, a traffic signal warrant is probable. With a signal the intersection would operate at LOS C/C.

Signalized Intersection LOS Summary		
LOS/Control Delay (secs) A=0-10, B=>10-20, C=>20-35, D=>35-55, E=>55-80, F=>80		
Intersection	2040 Total	
	AM	PM
Highlands Creek/32nd Ave.	C/22.4	C/21.8

Cross checking this against latest review for the Filing 9 study, that study has determined traffic signalization will be warranted (also analysis is provided for Signalized LOS below this paragraph). Please revise this text to indicate that 2040 intersection for Highlands Creek/32nd is projected to met signal warrants, per warrant analysis provided in appendices.

Paragraph revised.

An analysis of the intersection volumes shows that a traffic signal is warranted based on project conditions. The signal warrant analysis attached indicates that all three volume warrants would be met.

TRAFFIC CALMING

City staff is requiring a discussion of the application of elements from the Traffic Calming Toolbox. In the toolbox or as in many other sources including FHWA's Traffic Calming ePrimer, there are a considerable number of traffic calming techniques to address a myriad of traffic related problems including speeding, cut-through traffic, and pedestrian safety.

Calming options to reduce speed include, but not limited to, automated speed radar signs, curb extensions, speed humps, roundabouts, chicanes, and raised crosswalks. These vary in effectiveness. Speed humps (cushions, tables, etc.) can be highly effective, but also dangerous if not used properly. Automated speed radar signs are only marginally effective and unenforceable.

Initiative-taking measures are generally limited to crosswalk markings and signs, pedestrian bump outs on the intersection corners, speed tables/humps, and strategically placed stop sign control. These are commonly applied and recommended.

Once the project is fully developed and should problems arise, the City's program for traffic calming embodies a sound process to work with neighborhoods on implementing appropriate measures to resolve problems such as speeding, cut-through traffic, and pedestrian safety.

MITIGATION

Highlands Creek Pkwy. is a three-lane collector roadway with a center left turn lane. 32nd Ave. is also a three-lane collector. The center turn lane on Highlands Creek Pkwy. will provide storage for the left turn movement at intersections. Right turn lanes are not warranted on Highlands Creek Pkwy. or 32nd Ave. The WBL at the Highlands Creek Pkwy. and 32nd Ave. will likely require left turn lane of approximately 200 feet as will the WBR.

Is this for signalized operations?

At the internal intersections the left turns will be from the two-way center left turn. Right turn lanes on the three-lane Collectors (32nd Ave. and Highlands Creek Pkwy.) are assumed for State Highway Access Code NR-C category. For any right turn that exceeds 50 vehicles per hour during a peak hour the length of the right turn lane should consist of an 8:1 taper and storage. COA has adjusted the 50 vph threshold to 100 vph. COA is recommending all right turn lanes at the local intersection provide 50 feet of storage.

Yes

The roadways will be constructed to City standards which are designed to accommodate pedestrian and bicycle activity. Traffic calming measures such as pedestrian bump outs and crosswalk markings should be placed in appropriate locations. The Aurora Highlands master plan will augment the standard with added infrastructure to enhance bicycle ridership. Programs include widened sidewalks, two-way bike tracks, and off-street trail connections.

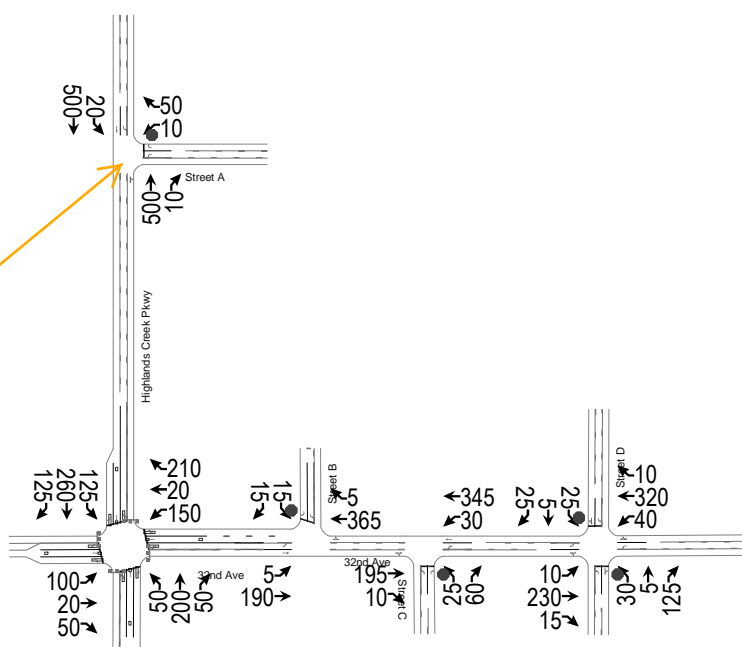

CONCLUSIONS & RECOMMENDATIONS

The analysis and recommendations contained herein demonstrate that the development of Planning Area 70 is consistent with the approved land use planning and roadway and intersection improvement recommendations in the FHU study and NEATS. This refined operations analysis show that the proposed roadways and intersections will function at an acceptable level of service.

APPENDIX

I believe there is a 4th leg to this intersection as well. Add four legs to all models, typical all appendices.

Traffic Signal Warrant Summary Worksheet

100%

The Worksheet(s) attached are provided as an attachment to the Engineering Investigation Study for:

Intersection: Highlands Creek Pkwy & 32nd Ave.

County:

Town: Aurora

Major Street: Highlands Creek Pkwy

Minor Street: 32nd Ave.

Critical Approach Speed: 35 mph

Critical Approach Speed: 35 mph

Lanes: 2 or more lanes

Lanes: 2 or more lanes

% Right Turns Included

In built-up area of isolated community of < 10,000 population? No

From North (SB) 0%

Total number of approaches at intersection? 4 or more

From East (WB) 0%

If it is a "T" intersection, inflate minor threshold to 150%? No

From South (NB) 100%

Manually set volume level? 100%

From West (EB) 0%

Analysis based on PROJECTED volume data.

Forecast Year	Within 5 Years of Construction?	Time (HH:MM)			
		From	AM / PM	To	AM / PM
2040	No	6	AM	10	PM

Warrant Evaluation Summary	Warrant Met:
Warrant 1: Eight - Hour Vehicular Volume	Yes
Condition A: Minimum Vehicular Volume	Yes
Condition B: Interruption of Continuous Traffic	No
Condition C: Combination: 80% of A and B	No
Warrant 2: Four-Hour Volume	Yes
Warrant 3: Peak Hour Volume	Yes
Warrant 4: Pedestrian Volume	N/A
Criterion A: Four-Hour	
Criterion B: Peak-Hour	
Warrant 5: School Crossing	N/A
Warrant 6: Coordinated Signal System	N/A
Warrant 7: Crash Experience	N/A
Warrant 8: Roadway Network	Yes
Warrant 9: Intersection Near a Grade Crossing	N/A

Warrant Analysis Conducted By:

Name: John Aldridge

Agency: Aldridge Transportation Consultants

Date: 10/6/2022

Warrant 1: Eight - Hour Vehicular Volume

100%

Warrant Evaluated? Yes

Warrant Satisfied? Yes

Manually Set To: Yes

Condition A : Min. Veh. Volume		
Volume Level	100%	80%
Major Rd. Req	600	480
Minor Rd. Req	200	160
Number of Hours	8	12

Satisfied? Yes

Condition B: Interruption of Continuous Traffic		
Volume Level	100%	80%
Major Rd. Req	900	720
Minor Rd. Req	100	80
Number of Hours	3	6

Satisfied? No

Condition C: Combination of A & B at 80%		
---	--	--

Satisfied? No

6:00 AM		Enter Start Time (Military Time) (HH:MM)			Total
Time Period	From	To	Major Road: Both App. (VPH)	Minor Road: High App. (VPH)

16	21:00	22:00	352	53	405

Warrant 2: Four-Hour Volume

100%

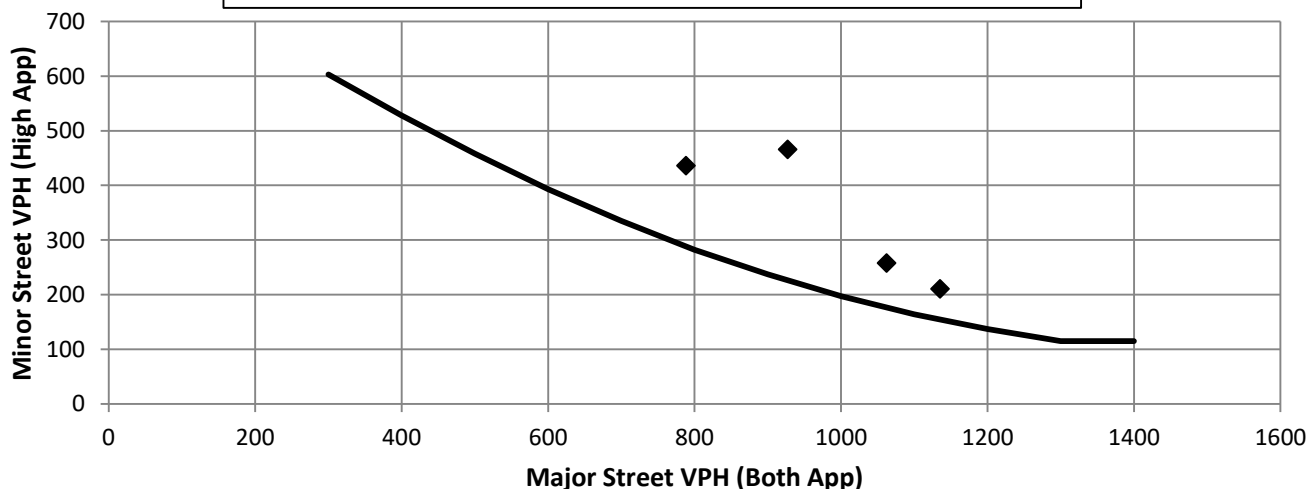

Warrant Evaluated? Yes

Warrant Satisfied? Yes

Manually Set To: Yes

Hour Start	8:00	17:00	18:00	7:00
Major Road Vol.	927	1135	1062	788
Minor Road Vol.	466	211	258	436

Figure 4C-1 Warrant 2, Four-Hour Vehicular Volume

Warrant 3: Peak Hour Volume

100%

Warrant Evaluated? Yes

Warrant Satisfied? Yes

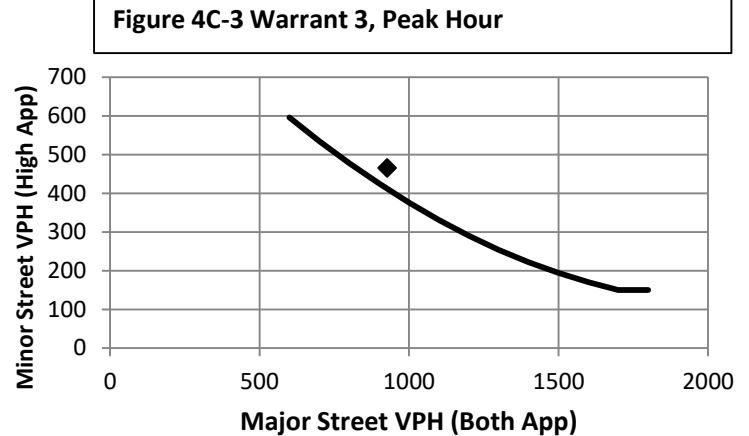

Manually Set To: Yes

Condition justifying use of warrant:

Criteria		Met?
Delay on Minor Approach	5	Yes
Volume on Minor Approach	150	
Total Entering Volume (veh/h)	800	

Manually Set Peak Hour? No

Peak Hour	Major Road Vol. (Both App.)	Minor Road Vol. (High App.)
8:00	927	466

Warrant 4: Pedestrian Volume

100%

Warrant Evaluated?

Warrant Satisfied? N/A

Manually Set To:

Criterion A: Four Hour

Hour (Start)	Pedestrian Volume	Major Road Vol.
0:00	0	#N/A
0:00	0	#N/A
0:00	0	#N/A
0:00	0	#N/A

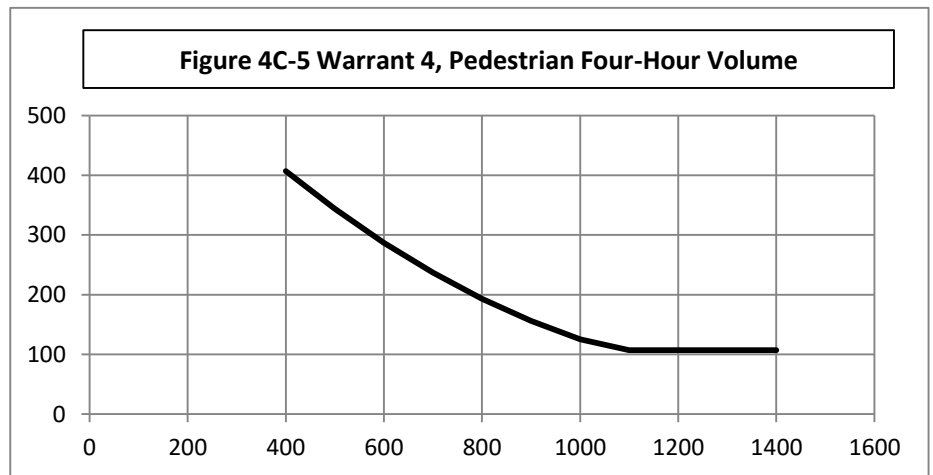

Manually Set Major Rd Vol?

No

Avg. walk speed less than 3.5 ft/s?

No

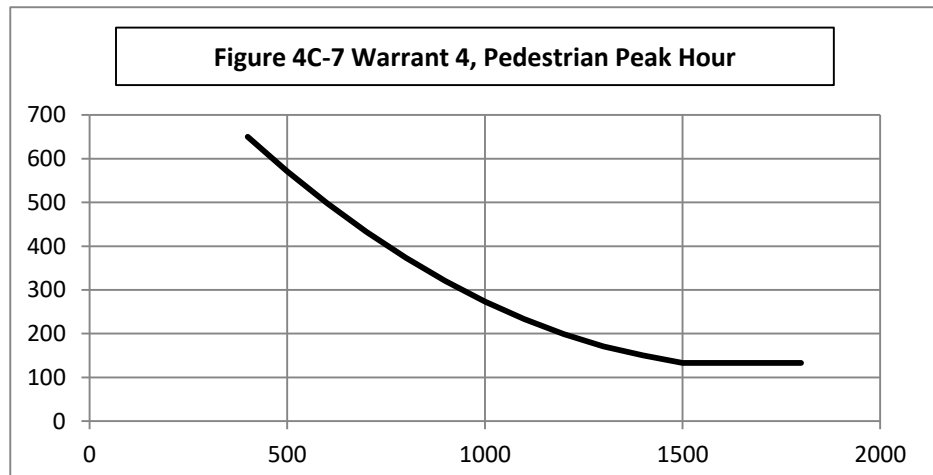

Criterion A Satisfied?

Criterion B: Peak Hour

Peak Hour	Pedestrian Vol.	Major Road Vol.
#N/A	#N/A	#N/A

Criterion B Satisfied?

Warrant 5: School Crossing

100%

Warrant Evaluated?

Warrant Satisfied? N/A

Manually Set To:

Criteria

Fulfilled?

1	There are a MINIMUM of 20 school children during the highest crossing hour.	
2	There are fewer adequate gaps in the major road traffic stream during the period when the school children are using the crossing than the number of minutes in the same period.	
3	The nearest traffic signal along the major road is located more than 300 ft away. Or, the nearest traffic signal is within 300 ft but the proposed traffic signal will not restrict the progressive movement of traffic.	

Warrant 6: Coordinated Signal System

100%

Warrant Evaluated?

Warrant Satisfied? N/A

Manually Set To:

Criteria

Fulfilled?

1	Signal spacing > 1000 ft	
2	On a one-way road or a road that has traffic predominantly in one direction, the adjacent signals are so far apart that they do not provide the necessary degree of vehicle platooning.	
3	On a two-way road, adjacent signals do not provide the necessary degree of platooning and the proposed and the adjacent signals will collectively provide a progressive operation.	

Warrant 7: Crash Experience

100%

Warrant Evaluated?

Warrant Satisfied? N/A

Manually Set To:

Criteria

Met?

Fulfilled?

1	Adequate trial of other remedial measures has failed to reduce crash frequency.				
	Measures Tried:				
2	Five or more reported crashes, of types susceptible to correction by signal, have occurred within a 12 month period.		# of crashes per 12 months		
3	Warrant 1, Condition A (80%)			Yes	#N/A
	Warrant 1, Condition B (80%)			No	
	Warrant 4, Criterion A (80%)			#N/A	
	Warrant 4, Criterion B (80%)			#N/A	

Warrant 8: Roadway Network

100%

Warrant Evaluated? Yes

Warrant Satisfied? Yes

Manually Set To:

Criteria

Met?

Fulfilled?

1	Total entering volume of at least 1,000 veh/h during typical weekday peak hour		1393	Yes	Yes
	Five-year projected volumes that satisfy one or more of Warrants 1, 2, or 3.		2	Yes	
2	Total entering vol. of at least 1,000 veh/h for each of any 5 hrs of non-normal business day (Sat. or Sun.)				
	Hour				
	Volume				

Characteristics of Major Routes - Select yes if all intersecting routes have characteristic

Fulfilled?

1	Part of the road or highway system that serves as the principal roadway network for through traffic flow	Yes
2	Rural or suburban highway outside of, entering, or traversing a city	Yes
3	Appears as a major route on an official plan	Yes

Warrant 9: Intersection Near a Grade Crossing

100%

Warrant Evaluated?

Warrant Satisfied? N/A

Manually Set To:

Adjustment Factors			Manually Set Peak Hour?				
Rail Traffic per Day	% High Occupancy Buses on Minor Road	% Tractor-Trailer Trucks on Minor Road	D	Peak Hour	Major Road Vol.	Minor Road Vol.	Adjusted Minor Vol.
1	0	0% to 2.5%	660	8:00	927	466	156.11
