RE: Case Number 1978-6043-09 – Letter of Introduction

To Whom It May Concern

The Circle K fueling station located at 298 S Potomac Street in Aurora, Colorado is proposing the installation of 2 NB40 180kw EV chargers which would serve 4 stalls. These chargers would occupy 5 existing parking spots located along East Alameda Avenue. The existing curb would be slightly modified to accommodate these new charging stalls. The project would also include the installation of a new utility transformer from Xcel Energy as well as a new switchgear unit to act as the main distribution panel for the EV charger project. This ground mounted mechanical equipment will be screened by Arbor Vitae.

Please note that Circle K does not limit their EV charging stalls to electric vehicles only. Any customer may park in these stalls regardless of vehicle type.

We hope these responses assist with your approval of this project. We appreciate your patience as we move through this transition as the new Engineers of Record for this submittal.

Phillip J Jaminet
